questions and answers, that inexperienced Novice type Extras would
result. So there is really nothing extra about today's Extra class
licensee.

I don't feel that the exams can be
> expected to determine who is going to make a good radio amateur because that
> is a matter principally of attitude. But, in my limited experience I have
> found that the vast majority of people who go to the trouble of studying for

No question that is probably the most important factor. With it one
will learn what he needs to know, but he still misses much he should
have gotten in study of material instead of just the pools. Sure, some
applicants do study other things. Most have no need to. They can pass
the tests, one at a time, by studying that element in the pools. You
don't get much detailed information in the pools.

>
> > Ed doesn't think that any significant amount of hams do it that way.

>
> Since there were no cheet sheets brought into the exam, you can be confident
> that the applicants had knowlege of the facts queried on the exam.

You can if you think you should, based on your experiences. I never
expected to come to the opposite conclusion, and it developed over
several years time experience as a VE. I saw things that all finally
summed up to it. All confirmed by the considerably lowered knowledge
level demonstrated by so many new licensees. As I said, it's not their
fault and I don't intend that they should suffer for it. But improvement
in the tests is way overdue. Problem is the VE QPC is also voluntary,
and effective changes to questions to make them so that they can't
easily be memory associated, as the few that Ed posted, takes a lot
scarce volunteer time, thus is unlikely.

These
> facts are deemed to be those which are the most relevant to amateur radio
> knowlege. If you feel the material covered by the question pools is

I imagine you're tired of hearing about it. Don't blame you, I'm tired of saying it, especially when I get accused of spreading falsehoods.

> > Just for practice, and to try to catch flaws in the questions and

So, no whistleblowers allowed?

I did offer to Ed to use one of his new defective Handbooks to form some questions on new material, but he ignored me. I wasn't surprised. But I don't own a new handbook, though I started to buy one at a hamfest a month ago. But every copy each vendor had was shrinkwrapped in celophane. Not even a single sample was open for inspection. And I guess I'm just stubborn enough that I wouldn't buy one without being able to look it over first. There was another ham, an older fella there also looking at them. He turned to me and said, "That's like buying a pig in a poke", and we both walked away emptyhanded. I bought Moxon's "HF Antennas For All Locations" instead. ARRL would do well to send those "bent cover" issues out to vendors to use as samples if they have so much handling damage they have to shrinkwrap every copy. The new handbook must not be a very big seller.

> Question for you: how did you first learn the resistor color code? Was it;
> bad boys rape our young girls but violet gives willingly?

That wasn't the way I first learned it as a ham, but it's how they taught it in military electronics school.

Read my sentence above, Dick. Obviously, I never denigrated ham radio by saying that it is "just" a hobby. Because, like you said, it is more than just a hobby - it is a hobby that also offers a service to others (public service, etc).

But, since most hams already know that, I really didn't see the need to spell it out again. Furthermore, that aspect simply didn't relate to the context of the discussion (experts versus amateurs - which is what my sentence above was addressing).

By the way, several people (not Dick) have privately voiced dismay that defining ham radio as a hobby somehow takes away from its value, or the value of the effort they've put into it. Since others may feel the same, let me state here that I strongly disagree.

Much of the best aspects of culture has its roots in hobbies (art, writings, music, etc). And we can all be proud of our efforts to obtain that license (because of it, we know far more about radio and electronics than the average joe on the street today). And, finally, we can all most certainly be proud of our service to the public (very few people today do half as much).

The only thing taken away, by constantly reminding people that this is a hobby, is the elitist attitudes and behavior that so often drives people away (from anything - including ham radio).

Ed: I have never owned equipment useful on any frequency above 440 mhz and I traded off my 440 rig because there was no use for it here. It would shake me not at all if FCC took most of 440 and everything above it. As I do believe will eventually happen, less the possibility of some sharing.

IMO, they are also

I'm not talking about "worthiness" or any lack thereof. I'm
specifically talking about one of of "justifications"which were posted
in this NG on inumerable occasions in support of the reduction and/or
elimination of the code tests. Those comments are carved in stone in
Deja. As history has clearly demonstrated it's miserably failed
excuse. Bogus to the core.

>

The U.S. Unhindered have been on the air for a decade. Where are their
"altenative technologies"?? The only "alternative technologies
(modes)" I've seen in the past decade are the plethora of new and
rapidly emerging HF digital modes cobbled together by a multinational
collection of 12/13/20 wpm code-tested "dinosaurs".

I don't have a problem in this world with the nocodes so let's get
past it Dwight. My position is that the nocodes are on the air in the
most endangered of our spectrum spaces in profusion and are certainly
doing more to preserve those spaces than I am and God bless 'em. But
cut the crap about any technical contributions they make, ain't

happened yet.

I spent the evening today at our monthly RACES meeting. With Spring on the way, it was also the annual "Storm Spotters Training Session", with the house filled with non-ham sheriff's deputies, local police, firemen, EMT's and other volunteer storm spotters. (We have lots of foul Spring weather in the Midwest including your share of tornados).

The training session was conducted by a very competent young meteoroligist from the National Weather Service. One of his points was that ham radio operators are invaluable in the conduct of this program. He noted that the regional NWS HQ where the regional doppler radar is located has a ham radio station with at least one operator active each time severe storms are anticipated, along with the many trained hams who are weather spotters in the field, and that they consider this effort to be critical to the success of effective weather warning.

You can regard that as hobby if you wish. I call it service.

Dick, you must have a reading comprehension problem, because I never described any such thing. I was addressing a very specific issue in that message - "expert" hams in a hobby radio service as those relate to license exams.

Beyond that, my comments neither addressed, or were intended to address, a description of any radio service. And, after reading my message again, I still have absolutely no idea where you came up with this CB nonsense.

Since you have agreed with me in this very thread that ham radio is a hobby, and every ham already knows that service is a part of ham radio, would you please explain to me what the heck you're talking about?

 You err if you believe I deliberately misrepressnted anything you said.
I assumed that your use of the references of FCC officials statements
meant the same thing to you they did to me.

Since your question is a derivative of my comments, let me add my two cents worth. I think a lot of people do it for both reasons. When I got into ham radio, I did so with visions of contacting people in far off lands and was also very interested in the MARS program. Of course, since I went to Italy shortly thereafter, contacting people in far off lands was a lot easier than I expected. And, because of that extended trip overseas, I never really did anything about my interest in MARS (by the time I got back, the C.G. Aux had my interest instead).

And you might be amazed at how many of those people conversing on the radio are involved with public service. Ninety-five percent of the C.G. Aux communications personnel are hams. And good number of hams in this area are registered with civil defense. Of course, there is never enough people involved in public service, but there is still a respectable number of hams involved.

I'd like to hear that myself. I'm still trying to figure out how he arrived at those opinions after reading my comments. His opinions about my comments and my actual comments don't seem to relate at all.

>questions in QST.

I'm not a subscriber to QST. Please tell all for the benefit of those
who haven't been through one.

>Things are not at all how you try to portray them.

Sorry, but a rather large press corps and broadcasting covered
the event. I'm not stating anything that wasn't already reported
or seen by the administration.

>If you were at all
>personally involved in emergency preparedness you would know the extent
>to which police and fire have improved their ability to respond since
>the Oklahoma City disaster.

I was talking about the Northridge Earthquake of January 17, 1994.
The Muraugh Building bombing in Oklahoma City happend April
19, 1995, over a year later. Were you referring to "another"
Oklahoma City disaster?

> And you would also know the extent to which
>amateur radio is an integral part of the response plan in California.

I know of the California Office of Emergency Services and the
Auxilliary Communications Service, RIMS, SEMS, and the
federal SHARES. I have some unknown-currency information

on the activity of the California National Guards. Is there more?
Please, tell all so that everyone will benefit.

>But you don't know, and so you just make stupid comments about it in an
>attempt to vilify amateur radio. Who needs you?

No one needs someone who cannot argue, discuss, or even
debate a subject without trying to attack the person.

The nation of India has seen a truly terrible disaster in an
earthquake ten times and more stronger than the Northridge
Earthquake of 1994. That was seven years ago for the Los
Angeles area, plenty of time for all truly concerned to begin
planning for a similar real emergency. The Los Angeles area
was already so planned, drilled, exercised and did its task
well. How did amateur radio licensees help in this effort?

If there is anyone "villifying" something it is Jim Kelley who
seems to imagine more than what was ever said.

Why? Because they don't go into virtual hysterics on giving High
Fives to all licensed radio amateurs?

For your benefit, my name is Leonard H. Anderson, not "Mr. Len."
My mailing address is 10048 Lanark Street, Sun Valley, CA,
91352...located in the eastern part of the San Fernando Valley
area of Los Angeles.

>You seem to forget that, while it is absolutely correct for
>professional emergency response teams to be ready for any event, most
>volunteers ARE involved and neither ask for, nor receive, much credit
>for what they do.

That was not a subject of my response. As a citizen-volunteer myself on various occaisions, I've never asked nor demanded "credit" or anything else. That was not the subject or intent (not even implicit) of my posting.

>If, as you state, the usual public communications
>media are not damaged, then there is not as much need for assistance
>as there would be if the reverse were true.

The state of California has an Office of Emergency Services under the governor and specifically for communications, the Auxilliary Communications Service (ACS). The ACS has its origins in RACES but has been expanded to include unlicensed persons in the event of a real emergency. The California OES is also involved with SHARES, the federal HF network...which can tie in the state National Guard and the US military.

The standard argument from amateurs for Real emergency communications is that "cell phones will be useless" as well as the landline telephone system. That may happen in small sections of the country during any emergency...but it also presumes that the telephone system is the only communications means. That isn't so, but it is convenient for the purpose of achieving message points in a newsgroup. There are many and varied ways to communicate in Real emergencies since there exist many and varied radio services in addition to amateur radio.

The question to ask in REAL emergencies is whether or not any individual radio amateur's station or even part of radio equipment will survive. Such equipment is usually ready-built, purchased and not designed for emergency environments. Much of the professional/commercial equipment is designed for harsher environments. This includes antennas and towers.

To find out more about the California OES and ACS, link to

    http://www.state.ca.us.

and look around the OES home page. [there's also a lot on the California energy problem]

> DUH! Every situation is
>not the same. In 1989 my area experienced a full blown hurricane called
>Hugo.

It is realized that REAL emergencies vary by region, locality, and with many variations of disaster. My comment to K4YZ emotional plea about the India-Pakistan earthquake concerned another earthquake that happened uncomfortably close to my home on 17 January 1994 at roughly a quarter to five AM. That particular earthquake killed 57 people, injured 11,846 others and caused over 40 billion dollars in property damage. One MHV power line tower toppled, cutting off ALL primary electrical power to about ten million of us scattered over an urban area of roughly 20 by

40 miles (estimate by self).

> ALL power lines were down. NOBODY had power--some for as much as a month. Repeaters, both commercial and amateur, were off the air. Suddenly that service you denigrate as "just a hobby" became VERY important. Police and fire comms were either down or greatly hampered. Who filled in? The HAMS, that's who! THEY provided both backup comms and spare generators to the emergency authorities. Where generators were not available due to the vast destruction, and the huge amount of traffic, hams used their mobile HF radios (me included)to augment what comms there were.

Yes, the amateurs came to the aid of the communities even though their repeaters were down (your statement). My comment concerning the Northridge Earthquake of 1994 did not state that radio amateurs were not helping. I asked simply "where were they?" They were not in evidence, either observed or on broadcast radio and television. Note: The tower causing the total electrical power outage was jury-rigged upright within four hours by utility workers but the entire area had to come back up through a "black start" (power term denoting putting the electric power grid up from a total absence of input). Electrical power was restored to about 90% of the area before midnight. Radio and TV broadcast stations were back on the air as soon as their emergency power generators could be started.

Meanwhile, hospitals and medical centers had their emergency power generators keeping health facilities working, the various Fire Departments were never out of order, the various Police Departments were never out of order (except for two patrol cars caught on collapsed overpasses). Utility crews were mobilized for repairs using their own radio system, as were many different combined city emergency services. There is an emergency communications center in Los Angeles that coordinates such emergency work and it rode out the earthquake along with many aftershocks.

> And if you think that the local governments and emergency management teams weren't grateful, you are mistaken.

You are trying to imply that I said bad things about radio amateurs. I did not do so.

> If you could truly know how little you know, you would not post such drivel.

I know more than many radio amateurs about communications in both regular services as well as REAL emergencies. The California Office of Emergency Services is not in the "drivel" business nor is the California ACS communicating "drivel."

I repeatedly asked the same question about a devestating local earthquake big enough to kill 57 outright, hurting several thousand others, and causing widespread destruction. It was simply "Where were the radio amateurs?"

That was 7 years ago. I've been directed to a certain copy of QST to "read all about it." Thank you, I was in the middle of it, and got quite a bit of information from the local press and broadcasting.

>Like it or lump it, sir, Amateur Radio is here to stay and enjoys the
>respect of governments throughout the world, as well as the populations
>that have benefitted from hams' volunteer service.

You have inferred far too much from my posting. I was replying to an emotionally-fired posting concerning the very REAL devestating earthquake centered in the nation of India. While the Northridge Earthquake was not on the scale of the Indian one, it nonetheless killed human beings, injured many, and caused billions of dollars in damage. Why go into ranting of an India quake when the USA has already had more than one in the last seven years?

Are radio amateurs REALLY equipped, trained, and ready-to-go at every emergency, local, state, or federal? The California plan for ACS allows not-licensed-in-amateur-radio to participate in REAL emergencies. I've not seen that in RACES' plans. Perhaps you can fill me in to avoid "drivel" repetition.

> As a volunteer, both
>as a ham and in other organizations, I resent your ignorant ramblings
>about ham radio, volunteers, and their contributions to the well-being
>of our communities, states, and Nation.

I've never ranted about any volunteer work by anyone...but I have ranted about flag-waving, phrase-making repetitions of those who were NOT in REAL emergencies...I have ranted about the chest-puffers, the medal-wearers of non-accomplishment who have no evidence of their volunteerism other than repeating the same trite phrases of "value to the community." There's a BIG difference between TRUE volunteerism and the bragging seen too often in here.

The problems many radio amateurs face is an ignorance of the existing infrastructure of both landline and radio communications. They do not join in any organization as a general rule, do not train because they are not members. They, as a general rule, simply say "I am ready!" and don't understand that such chest-beating is not enough. "Radio" is more than ham stuff, CB, cell phones, and broadcasting. There is much more to the entire radio community available for REAL emergencies.

>I am both proud and willing to serve when needed.

My US Army serial number was RA 16 408 336. If you know the old system of the US military, the "RA" denotes a volunteer. That was in 1952 to 1960. Can one volunteer MORE than one's life for one's country? I don't think anyone can.

>Further, I have rarely heard one word of support for
>hams in your posts, rather your posts consist of whining and belittling
>subjects you so obviously know NOTHING about.

Translation: I don't stand up and cheer wildly when someone mentions amateur radio...I don't repeat trite phrases of self-praise for the "good of the service," nor have I memorized all the self-promotional mantras of the amateur organizations. REAL emergencies are unaffected by anyone's propaganda.

Sorry, I'm still a professional in radio who got started legally in 24/7 HF communications in 1953.

My main purpose on getting into this newsgroup was to argue the elimination of the morse code test for the amateur radio license test. Since that time a bit over 3 years ago, I have been a target of personal abuse by those who cannot defend the sanctity or need of the morse code test for an amateur radio license. Since they cannot logically support the code test as it applies to newcomers, they attempt abusing those persons who wish to remove it.

>I don't have to get into
>it with you to make my point; you have made it already.

You must. You imagine that someone tried to tear down amateur radio as, apparently, YOU KNOW IT, and want a pound of flesh. Sorry, I cannot imagine what your imagination conjurs up, only that you want to hurt someone physically for imagined insults.

>My own hat is
>off to volunteers EVERYWHERE who do so much with so little, and receive
>barely a word of acknowledgement for their efforts. If I had to put up
>with that crap in person after I have slogged around in the mud dodging
>poisonous snakes for 2 days (like hurricane Floyd), I'd punch the a**
>hole in the mouth!!!!!!!! GRRRRRRRRR!

Just exactly who "slighted volunteers?" I volunteered to help in searching the Veteran's Hospital collapse in the Sylmar Earthquake of 1971. Nobody gave me any praise, coffee, certificate of appreciation or anything else beside a handshake and that was enough for me. I spent three days at the Sylmar Veteran's Hospital rubble. You are free to call me all the names you want, imagine whatever you wish (quite a bit), but physical violence is going to be more difficult to accomplish than you think. It won't make your imaginary case.

I'll ask again and expect something besides a reference to a

QST article. In the 1994 Northridge Earthquake where were the
radio amateurs? That was 7 years ago (plus almost a month).
I know where the professionals and commercial people were,
what they were doing.

Has anyone briefed themselves on the California ACS or the
OES, do they know anything about SHARES? Or is everyone
just reading what is written in ham organization literature and
then imagining what real emergencies are like, how they feel,
all the while sitting safe in their ham shacks...?

Gee, I know you're so much smarter than the average human being, WA8ULX, but I know I learned something by memorizing those questions and answers. And I learned even more by reading the rest of the book that contained those questions and answers. And I learned still more by further reading not associated with that license exam. And I learned still more from my experiences since obtaining that license.

A large part of learning is memorization, WA8ULX. I assume even you had to once memorize things as part of your learning process (but maybe you were too smart to need that). When we're children, we learn to speak by memorizing what others have said. Later, we memorize rules for spelling, shapes for writing, dates in history, formulas for math, theories for science, and so forth.

After we memorize all those things, we can then go forward to apply those memories to the real world (and perhaps if we remember how we applied them, we might learn still more).

Actually, there were articles in several ham magazines describing the efforts of hams during both of these incidents. No, hams don't "always" come through in every circumstance, Len. But large numbers do at least try.

Well, since ham radio is a hobby (and everyone knows that), the way to change that impression is to become involved in public service activities and perform those services in a manner that convinces people to take those efforts seriously.

Ah, Cottonmouths are not that bad, Jerry. I have a whole hurd of them in the creek behind my house. In fact, the snakes and the snapping turtles seem to have a feud going on since the first part of last summer. And, before the cold weather hit, the snapping turtles were winning - they attack the snakes from below as the snakes swim across the surface. A few strikes from the two to three foot snapping turtles and it is pretty much over for the snakes. At that point, a number of turtles move in to finish off the meal. It is amazing to watch.

To be honest with you, I'm not used to all this. While I have spent some time on the farm during my childhood, I'm mostly a city person. I never knew that snapping turtles grew this large. I never knew that snapping turtles ate meat and would attack living things in the water. And I darn sure don't like all the snakes in the area. In other words, this is way too much country for me.

Cecil, you really didn't expect logic from someone who posts and reposts the same mantra year after year did you?

The no-code folks love him; he supports their cause by making the pro-code folks appear bad.

Either that or he just figured that choosing that "side" would be the most fun and stir up the most trouble.

Either way, logic will not play any part of what he posts or any responses.

> More than a year ago I recall him posting that he was going

> for Extra, had a new house with no antenna restrictions, the works.
> None of it has happened.

I can give you a list of things that I wanted to get done in the past year that have not happened either.

>No articles on SS or anything else that I've seen, either.

That is, IMHO, much more unfortunate than his not getting an Extra. He certainly has the ability to design that SS transceiver that seems to be missing from Amateur Radio. Considering his technical talents, IMHO, that would be a more unique contribution to Amateur Radio than his leadership of NCI. Bill Sohl could take over, with his skills at politics, leaving Carl free to make technical contributions. :-)

>How many other countries have as many hams as the USA with HF privileges and
>power greater than QRP? Think about WHY the USA has subbands.

The reasons I think the US has subbands have nothing to do with power level. Most countries that have HF priveleges have power limits >> 5 W.

>They are supposed to - but the foreign 'phones are now down below 7050, for
>example.

And the US digital folks are now above 7050, for example.

>There is also a growing philosophy of "if it's not prohibited by the FCC, I'm
>gonna do it, don't tell me about no steenking bandplans". I have seen it here
and elsewhere.

That is probably the reason we have mode allocations.

>That's not the end of it. He wants NO "support for legacy modes".
>Translation:
>If your QRP CW signal gets buried under his highpower DSSS signal, too bad,
>you should get with the program and stop using the legacy mode.

That is pretty much his view. I disagree with him (Dick, please take note for future reference.)

>>I think that some FHSS needs to be permitted on HF.

>Why? What are the advantages?

The only reason I suggest that is that I believe that Amateur Radio should be engaging in as much experimentation as possible. That is one of many. Note my use of "some." Now, the way to do that could be via STA, but those that were doing anything with the last STA, if any, were not reporting their results widely.

>Doesn't matter. He wants a "free market of modes" - and that includes DSSS,
>not just FHSS. No limits, and if the existing narrow-band users are
>interfered with, tough.

That was pretty much his view the last time he posted here. Of course, when it comes to SS on UHF and above, the rules are very clear about interference.

>> There are some here who say some pretty bad things about
>>CW to justify keeping it.

>Lemme at 'em!!!! ;-)

You are quite welcome to join the "tag team." :-)

The FCC knows full well how question pools work. They apparently don't believe that vast hordes of hams are memorizing over a thousand questions without learning something in the process.

Today's licencees meet all of the accomplishments stipulated by law. What more are you asking them to do?

>>Not the Novice I took.

>You didn't specify which Novice.

1963, the same Novice I have talked about the many other times I have cited this tale. :-)

>The test I took required knowing stuff like Ohm's Law. The current tech does
>not.

Ohm's law was on the 1963 Novice, but that really was just about it for techncial content. No questions about antennas, feed lines, SWR, propagation and a host of others that are on today's Tech test.

Ohm's law most certainly IS on today's Tech, Jim. The pool even has questions about the formula for Ohm's law, expressed both as E=I*R and in plain English.

>>I studied 4 pages and passed easily.

>I very much doubt you started out knowing nothing about radio before those
>four pages, Ed.

I had dabbled in Electronics some, as a kid. But I don't recall anything on the test that was not virtually word for word what was on the study guide.

>And the number of pages is no indicator of the level of the material.

It was in this case. I had posted the entire study guide to this NG a month or so back.

>3) Because you were interested.

> That leaves 3). And the end result is an ARS with a few
> knowledgeable folks. Perhaps that is unavoidable.

I don't believe that every ham is interested in technology, Jim, but I think the interest level is higher than you think. People don't become hams because they don't want to learn. I would agree that the depth of technical testing may be less than it was, although that General required me to study 16 pages of study guide for a few weeks, so you tell me.

But that mile-wide river is a LOT wider than the river I had to cross when I got my General, and the entry level tests cover territory I didn't even know existed when I was first licensed. I found myself a year ago teaching the RF safety material to a Tech class and when I was teaching them the differences between the reactive near field, the radiating near field and far field conditions, so they could better understand how to answer certain questions, I was amazed that this is what we require of beginners.

When I was a Novice, old Hub, W1BNB, handed me those 4 pages and told me to study them. Today, we hand people a Now You're Talking and tell them that THIS is what they need to know to be a beginner. I gotta' tell you, if I had been handed that book when I was 13 instead of those 4 pages, I wouldn't have become a ham.   If we wonder why there are not as many kids in ham radio as there once were, compare the 4 pages to NYT and give me an analysis. The published question pools along take up about 90 pages in the book.

Add to that all of this bitterness about "dumbing down" that some are posting and reposting on newsgroups and elsewhere. Now, if someone had handed me the NYT book, but then handed me a General and an Extra and told me that NYT was a really easy accomplishment and if I wanted to be a "real ham" I would also have to learn that, too, and THEN said that it was all dumbed down from the 16 pages he had to study to get all amateur priveleges, I would have thought that hams were totally whacko and simply walked away. Some newcomers are subjected to exactly that treatment by some who probably honestly believe that they are doing Great Good for the Service by doing so.

>What W2ILP and many others are concerned about is that as the
>"average ham" becomes less operationally skilled and
> technically knowledgeable, our future is threatened.

I share those concerns. I just don't think that any licensing process could properly address them. The only way it could have meaning is if it were all incentivized, and I see no value into further compartmentalizing Amatuer Radio by license class.

The number of topics that SHOULD be known (not by individual amateurs, Dick -- by the Service as a whole) is greater than nearly any individual would be expected to accomplish. The depth of knowledge that could be known (Dick, this is not forcing you to have to learn anything, I promise) is greater than most hams would ever learn across the board. IMHO, once hams have met the requirements of our licensing structure, they are free to learn, or not learn, as they will. Look at the reaction here by one individual just because I said that hams should (not must) learn modern radio technology. Would you really want to see that reaction multiplied by encoding that Hare-brained idea into a license structure? I wouldn't.

I think that the best way to accomplish learning is to lay the foundation with testing and then rely on the very nature of the Service to take care of the rest. Things like ARRL's education and certification program need to be expanded past the one course they offer now on emergency communication. Tutorials in books or free on web pages abound on various technical topics, so hams can learn and do more.

Maybe what is needed is for folks to take steps to foster the development of a "can do" culture in ham radio (again?). I think some of what I have seen said here has had just the opposite effect.

Just another "whimper" from one of the gang in Newington. :-)

I have seen some of your characterization, Dick. I see it as an extremist view and do not believe that it represents a characterization of most people taking tests.

People are not becoming hams because they don't want to learn anything.

It is easier to learn a few simple formulas and apply grammar-school math to
solve them than it is to memorize over 1000 questions without understanding.

I don't believe that I have ever been in a QSO where the op on the other end
told me that he thought the current spate of amateur tests was dumbed down and
that vast hordes of people were doing no more than memorizing them. What
percentage of your QSOs contained this content? Did the op on the other end
bring it up on his own, or did you initiate that discussion. Did his wife call
him to dinner very soon after? :-)

There are more correct answers in the General pool than there were sentences in the 16-page General study guide I read to get my General license.

>From: Dick Carroll dixie@townsqr.com

>Sure, some applicants do study other things. Most have no need to.

Dick, you have no personal knowledge of what 99% of those who took tests before you studied. Your view of what they studied is speculation. You have often here offered the worst possible interpretation of people's words and then built a whole house of cards about what it meant. I am sure you are doing the same. Jim is apparently a VE, too, and he is not prone to wild speculation; his view appears to be more balanced and reasoned to me than yours.

>I never
>expected to come to the opposite conclusion, and it developed over
>several years time experience as a VE. I saw things that all finally
>summed up to it.

Just like your summing up of the things I didn't actually say here, Dick?

>Problem is the VE QPC is also voluntary,
>and effective changes to questions to make them so that they can't
>easily be memory associated, as the few that Ed posted, takes a lot
>scarce volunteer time, thus is unlikely.

I am sure that all of the questions that you have been sending to this group of volunteers you have oft' soundly criticized will help. Could you post the things you have sent to the QPC here so we can discuss them?

I also suggest that you re-read the question pool, Dick. The example I posted was about the best of them, but there are many groups of questions with very similar answers that cannot be word-association memorized, IMHO. If you will re-read it, I won't have to do another edit job to cut and past the relevant questions. Would you mind?

>If you feel the material covered by the question pools is
>> insufficient, then I'm sure everyone would be grateful if you were to offer
>> specific suggestions as to how that material should be supplemented.

> I imagine you're tired of hearing about it. Don't blame you, I'm tired
>of saying it, especially when I get accused of spreading falsehoods.

Is that really your answer to his question? It looks like a total non-sequitor to me. Did you cut and paste the wrong answer in composing the email?

> So, no whistleblowers allowed?
> I did offer to Ed to use one of his new defective Handbooks to form
>some questions on new material, but he ignored me. I wasn't surprised.

I was off the ng for several weeks, Dick; I do not read every post. Of course, with all of the griping you have been doing about the QPC and all of the errors you say you have found in the pools, you have been sending them questions all along, right? Could you post them here so we can discuss them?

>I bought Moxon's "HF Antennas For All Locations" instead.

I am sure you can write some excellent questions from that.

>I'm just stubborn enough that I wouldn't buy one without being able to
>look it over first.

I'll tell you what, Dick, if you buy the Handbook and don't like it, I will personally buy it back from you.

>ARRL would do well to send those
>"bent cover" issues out to vendors to use as samples if they have so
>much handling damage they have to shrinkwrap every copy.

Most dealers open one up and put it on display. The ARRL Lobby does the same. Of course, it does get a bit dogeared from the few who sit in the Lobby and read it so they don't have to buy one.

> The new handbook must not be a very big seller.

Seems to sell about as well as it ever did, according to my inside sources. :-)

Unless the discussion is how well an HT works stuck up some homosexual's ass, I fail to see the relevance in discussing homosexualty, destroying the fine reputation of the Boy Scouts, etc., in a ham radio newsgroup.

Let's discuss the hobby, communication methods, etc. The hobby is the purpose of this newsgroup.

> Well, since ham radio is a hobby (and everyone knows that),...(SNIP)

Ham radio in the United States is a SERVICE that is ALSO a hobby. It has specific basic criteria that it must meet in order to fulfil it's "Basis and Purpose".

That a great number of Hams do NOT participate in Emergency Services is a given, but those that DO help carry the day.

There are other aspects of Amateur Radio that meet the B&P splendidly, and it is the combination of all those factors that routinely save out bacon from the spectrum guzzlers.

>the way to change that impression is to become involved in public service activities
>and perform those services in a manner that convinces people to take those
>efforts seriously.

The problem is not here. It's there. But the "it's just a hobby" crowd are teh ones who undermine our foundation with the policy makers. You can build the greatest bridge, but pull the one keystone out, and all you have is a pile of rubble. Doesn't matter how well the rest of it was put together.

Except that I never used the term "Luddite," Dick. If you unimagine that I called you a "Luddite," does it still add up to you that if I say that Amateur Radio should modernize and that hams should learn more about modern radio communications technologies but that I feel mode diversity is important to preserve that I am telling you that hams need to abandon everything they are doing?

```

I agree with Darryl on this, in fact my correspondance with the ARRL regarding E-QSL revealed they are looking into this method. What is needed is actually an organization rather than individual. Historically, individuals will eventually quit or pass-on thus leaving the system "dead-in-the-water".

On the topic of actual "wall paper" nothing should prevent the use of these cards. In fact, if modeled after the currency systems of the world paper QSLs equate to paper money and E-QSLs equate to wire transfers. I like to collect paper QSLs but right now I have several countries on E-QSL that are worthless toward DXCC (the initial 100) that are badly nedded. In fact, one overseas ham was not aware of the ARRL stand and had actually sent me an E-QSL plus one through the slow and antiquated QSL Bureau System. (On that topic I have at least 3 envelopes on file - one for each postage change but nothing comes out. In fact the Bureau assistant manager for my call group will not respond to email inquires.)

The cavet for the organization accepting this responsibility is they cannot require membership to access. They could charge a fee for registration maintenance to recover costs.

kal

I agree with John. I like getting cards in the mail and I like to see REAL
QSL cards that have some creativity. Some of the DX cards have beautiful
pictures of their homelands, station, etc. Yes, they may cost us more
(greenstamps to the DX stations) but there is a great thrill in getting
overseas mail with the QSL.

Also, I think the ARRL should sponsor an award(s) the promotes real QSLing
beyond what we have today with WAS, WAC, and DXCC - both stateside and
international.

Regards,

Duffy - WB8NUT

truckers from 'out west' are on various frequencies almost every day from here in New England. 28085 and 28535 are the most common frequencies. references in their chatter have placed them anywhere from mississippi to chicago and west into idaho and new mexico. they don't hear ham qrm most of the time because they are always running in close groups probably with squelches turned way up. they also show up on 28005, 28035, 28135, 28235, 28295, 28545, 29260, and 29295 regularly, though i have heard them on almost any 10kc channel from 28005 to 28295. they do seem to avoid 28300-28500. except for the frequencies above they only rarely seem to go above 28500, but that probably won't last.

as the arrl's recent washington mailbox column says there isn't much anyone can do about them unless you get the license plates and hand them to the fcc. i have given this info to riley and am hoping they can use their df network to at least narrow down some of these guys to particular interstates or areas so local df work can get started to track them down... the real question is who can do the ground work? the arrl doesn't seem to think they can do anything, though i have suggested they send their transmitter hunting book to all the oo's and see if kenwood will give them discount coupons for mobile hf rigs (to help their image after the truck stop stories). i would expect it will only take a few busts to get the word out that going about 28000 is a bad idea.

It is simple, can be and is. You selected a definition from your dictionary. It was incorrect for the situation. Now you're stuck with trying to defend it. As usual, you are now adding various clauses to add to the original definition you provided in order to attempt to make your case.

While I'm not generally god-like, it doesn't take much of a god to see through your flimsy attempt.

Twist in the wind.

Let me get this straight. Your excuse for adding a second definition
well after you provided the first is that your dictionary is too heavy
to lift? You're a yuk a minute, Cecil. Bill Clinton couldn't have done
better.

> Your disagreement simply shows your ignorance.

The sentence is properly constructed but it is inaccurate. If it is not
mandatory to obtain either a driving license or an amateur radio
license, no one is forced to obtain one any more than one is forced to
take a morse exam. If you have options, you are not forced.

You've stumbled on this one and now you are *forced* to live with it.

What happened?  Did the one you originally chose *force* you to remove
the egg from your face?  Why the amendment (or are you attempting to use
the new one as an addendum)?

You're now attempting another game of adding material to your original
lame statement in an attempt to make it valid. That "if" you're now
using wasn't there initially. Neither was the "required by
circumstances" portion. No one is forced to learn morse.

Nobody is forced to learn morse code, Cecil. I am forced to endure your obtuse nature. What? I don't have to put up with it? I have options? I guess I'm not forced after all.

A Californian saying that Texas is "back east"? I would advise you not
to set foot in Texas ever again. :-)

You write "Of course" as if that somehow makes it fact. Of course you
are less capable as a wordsmith than as an engineer. You are simply out
of your league. To state otherwise makes you a liar.

That is a straw man. We're not debating whether I object to
dictionaries. I object to you selecting incorrect definitions of a
word. "I forced the door open." does not mean the same things as "I was
forced to endure Cecil's endless games". You selected the wrong
definition initially and are attempting to rectify that now.

It makes you look small.

That's your opinion, Dave. It is wrong. Your opinion and a buck
fifty will get you a cup of coffee. I very carefully selected
exactly the definition that matched the concept I wanted to
convey. That it chapped your a$$ is irrelevant.

You are wrong, Dave. That sentence is obviously accurate as any
ordinary prudent man can see from reading it. The definition of
"forced - required by circumstances" is directly out of "Webster's
New Universal Unabridged Dictionary", Barnes & Noble, �1996.

Darn! I count only five *if*s in there. What do you suppose they mean?
I'd say that they imply options. I think you'd better regroup and
ponder this a while.

Nope, "Webster's Ninth New Collegiate Dictionary" gives the definition
as "forced - done or produced with effort". That overlaps the
definition of "forced - required by circumstances" which appears
in my unabridged dictionary which I rarely open because it is so large.
You don't have to be beaten with a stick to have force used against
you. Rules, regulations, and laws are almost always backed up by the
force of the issuing authority.

> Why the amendment (or are you attempting to use
> the new one as an addendum)?

Why the attempted diversion, Dave? Diversions are invariably employed
by people who are losing the argument. Please stick to the subject.
If a ham is to have legal HF ham privileges then he is forced
(required by circumstances) to pass a Morse code exam. You do
understand if/then statement logic, don't you?

People who consider themselves so expert that they don't ever have to open a dictionary often get caught with their pants down. How does it feel to have your omniscient opinion of yourself dashed by the simple act of a dumb engineer opening a dictionary and proving you wrong?

The force of the State of Texas is behind the motorcycle test requirement. If I want to operate a motorcycle legally in Texas, then I am forced by the state to pass a motorcycle test. If I choose to ignore what is "required by circumstances" then I will be forced to accept a traffic ticket or worse.

Those are true statements, Dave, just like my if/then statements are true.
In case you have forgotten your logic, if the 'if' part of an if/then
statement is false, then the entire statement is true. Thus, "if a frog
had wings he wouldn't bump his ass when he jumped", is a true statement.
So is, "If a ham is to have legal HF ham privileges, he is forced to take
a Morse code exam."

Dave, I am trying to simplify the concept down to a point where even you can understand it. There are many ways to state an 'if' function that don't use the word 'if'. "In order to" is one way. If you had simply accepted my original statement as true, then I would not be forced to mount a detailed defense. I am not changing anything. I am expanding on the discussion so you will eventually understand it. Your objections required me to expand on my original statement and then you rag on me for expanding on my original statement. Tsk, Tsk. Hope you don't treat your children that way.

Hams with HF privileges are forced to learn Morse. They are "required by circumstances" to learn Morse code. The "circumstances" is the FCC's Morse code requirement.

You obviously don't understand the rules of logic, Dave. I suggest you stop considering yourself to be omniscient and open up a good logic book. If the 'if' portion of an if/then statement is false then the entire statement is true. If the 'if' portion of an if/then statement is true and the 'then' portion is true, then the entire statement is true. The only way an if/then statement can be false is for the 'if' portion to be true and the 'then' portion to be false. Every if/then statement I have made has been true. You were mistaken when you asserted that they were false.

If a ham wants legal HF ham privileges then he is forced (required by circumstances) to pass a Morse code exam. That's a true statement, Dave. There's just no getting around it. The force of the FCC is behind the

Morse code requirement.

I made an if/then statement which follows the rules of logic.
That if/then statement is true. According to the rules of classical
logic, your statement is actually false because HF hams are forced
(required by circumstances) to learn Morse code. There is an implied
'if' function in that statement.

I can make the same conditional statement without using the words,
"if" and "then".

In order to obtain HF privileges, a ham is forced (required by
circumstances) to pass a Morse code test.

It can be stated another way with the 'if' portion of the conditional
statement only implied.

HF hams are forced (required by circumstances) to pass a
Morse code test.

The implied 'if' portion are the HF privileges. If they don't pass the
Morse code exam, they are not HF hams. Thus the implied 'if' portion
of the implied conditional statement is false and therefore the entire
statement is true, following the accepted rules of classical logic.

> definition initially and are attempting to rectify that now.

Nope, both those definitions are valid dictionary definitions, Dave. I correctly selected the one I wanted to use. You objected to my selection. Now you are trying to convince us that you are an omniscient guru when it comes to dictionaries and definitions. You are not. You have made a simple logic mistake. Many people make the same mistake.

"I am forced to endure Cecil's endless games" is a true statement given some implied assumptions. The implied assumption is:

If I choose to argue with Cecil on r.r.a.p, then I am forced to endure his endless games.

That is a true statement whether you choose to argue with me on r.r.a.p or not. That is the rule of logic about which you are mistaken. If you do not choose to argue with me on r.r.a.p, the statement is still true according to the rules of classical logic. That's why you are mistaken when you assume my if/then statements are false. If the 'if' portion of an if/then statement is false, then the entire statement is true, by definition.

If a ham is to obtain HF privileges then he is forced (required by circumstances) to learn Morse code.

Sorry, Dave, that is a true statement.

The first overtone is the second harmonic. Both the fundamental and all the harmonics are partial tones (at least in audio work). I've never heard the term 'first harmonic' before, althought the meaning is unambiguous.

Ken,

This problem is like a cancer that has spread
through the body. The FCC cannot help, and

there is not a lot that you and I can do about it either. If the intruders were stationary, there might be a chance, but these guys are running mobile, nose-to-tail. We have no chance to break in, and they will never hear us on cw or rtty.

It gives me no satisfaction, but I saw this coming a long time ago. During the latter stages of the last sunspot cycle, intruders began to appear on the ten meter band. Export radios first showed up in East Asia, especially Indonesia and Taiwan. These radios spread to our shores during the sunspot minimum, and now show up every where.

It really hacks me off personally, but I really have no idea what we can do. The FCC is no help. because they would have to have personnel in mobile DF vans in every truck stop to even begin to effect a cure. I'm open to any reasonable idea, but bitching to Mr. Hollingsworth is simply preaching to the choir. I know that it is stooping to their level, but I always try to operate on frequencies ending in five. 28.085, 28.535 etc... I persevere and possibly operating there through the QRM might help prove a point to the intruders, and the point is simply that there are already authorized users of their new "company" channel. I also have a HTX-10 and will do as another ham suggested, that is, to monitor the most popular frequencies in an attempt to catch an operator "in the act".

At any rate, I'm not going to simply concede the bands to the illegals. If we give up, where will it end? Will the next "company channel" be on 14.085, 7.085, 3.585?

Any reasonable suggestions welcomed.

Cecil, ever Mister Twister the wordmeister, insists on replacing the
proper word which is "required" with the word of quite different
meaning, "required".

For sure not the first time we've seen him do this.

I suppose that everyone sees what you're doing, and of course you know exactly. Your conditional statement eliminates "forced" from possibility of being the appropriate word. The conditional statement makes it a choice, not a mandatory action, thus a "requirement" and not a forced action. The individual chooses whether or not to meet the stated requirement. It's his choice.

It is not a true statemtment. If wants to obtain HF privileges he is REQUIRED to learn Morse code. No one was ever forced to learn if. Nor is he required -nor forced- to gain HF privileges.

By Cecil's definition that frog is FORCED to grow wings IF he doesn't
want to bump his ass, and by gard you're FORCED to go to the store IF
you want to eat.

John O'Flaherty <oflahert@toast.net>
shared these priceless pearls of wisdom:

->The first overtone is the second harmonic. Both the fundamental and all
->the harmonics are partial tones (at least in audio work). I've never
->heard the term 'first harmonic' before, althought the meaning is
->unambiguous.

I respectfully disagree. When I operate a crystal on third overtone, I'm
operating on the third resonance of the fundamental, or the third harmonic.
That is, a crystal operated at 30 MHz. on the third overtone is operating a
fundamental 10 MHz. crystal with the plate buckling three times instead of once
per cycle.

The definition I used is the definition directly from the dictionary.
That it chaps your a$$ is irrelevant.

I suspect that some of the reported decline is QSLing, besides the cost,
is simply that for younger people, there is no longer anything particularly
exotic about communicating with people in far-off places. The world
has turned into such a small place that there is nothing special about
seeing images, or getting things from the other side of the planet.

For example, my enjoyment of radio comes more from playing with the
technology, and not really from "Hey! I just talked with a guy living
in Denmark!" I suspect I'm not alone in that.

It's not *my* definition, Dick. It is the definition of a word
in the English language directly from the dictionary. Ignoring
other solutions to your hunger problem, if you want to eat then
you are forced (required by circumstances) to go to the store.
That is a perfectly valid use of the word "forced". If you would
just open a dictionary once in awhile before opening your mouth,
you would not appear to be so ignorant.

I didn't say a person had no choice so you are trying to erect another strawman. The Morse code requirement is backed by the force of the federal government. HF hams are forced (required by circumstances) to pass a Morse code exam. Non-HF hams are not forced to pass a Morse code exam. What is it about simple English that you do not understand?

Uhhhhh Dick, "required" is part of the definition of "forced". An HF
ham is certainly "required by circumstances", i.e. "forced", to learn
Morse code. If you don't like the definition of "forced", I suggest
that you take it up with Webster's. I will continue to use my Webster's
as the reference book for the words in the English language.

HF hams are forced (required by circumstances) to learn Morse code.
If they don't learn Morse code then they are not HF hams. What is it
about simple English language sentences that you don't understand?

Sure they could. That is one of the great things about this
model. It isn't one enity that is responsible. The CA (Certification
Authority) is free to put any requirements they wish. What
the awards sponsers can not be allowed to do is unreasonably
restrict the use of a CA for validating public keys. This
could mean that your local radio club could and should become
a CA. They would have the burden of proof that they should
be consider a trusted CA. If a CA does become "untrusted"
their certificates would not be honored.

By using this model it creates a open market for CA and reduces
the chances that one enity will end of with control over
the whole thing. That is why I started this effort. To
prevent a single enity from becoming the master of eqsls.

I just created a reflect on yahoo groups. If you are interest
in this please join. thanks

I posted this yesterday. If hams find a person that is using a Radio on Ham Frequencies while in the employment of another then the law can be used to prevent employees of companies from illegal use of frequencies. Let say that all the truckers from ABC company jumped on the Frequency of 460.500 across the US. Then they would be prevented from doing so by Federal law. Now the same law applies to ham frequencies. The way to deter this type of activity is to start finding out who is the employer and then with evidence contact the FCC. The FCC would then notifier the employer that there employee is breaking federal law while in their employment. Recordings, pictures and license plate numbers would help identify the employees that are violating federal law.

It is no different then if you see a trucker driving reckless. You call the police and tell them who, what and where and they issue the ticket. We are gathering evidence of criminal activity and turning it over to the FCC for enforcement proceedings.

I am positive if that enough employers are notified that their employees

```
are committing federal crimes they will put a stop to it. After all these
people need a paycheck.

Apparently Mr. Cotter Pin, you have never sent a DX QSL, they cost of "one Hellva" (using red neck vernacular) more than $0.34 to send. In fact it is now for just a basic DX QSL as follows:

sending envelope	$0.05
SASE	$3.05 (up to)
QSL	$0.15 (up to)
Total Cost	$3.25 (up to)

Now to qualify this "up to" amount, this card was sent to a German QSL manager. I would guess the average cost is around $2.00 per card, if an

American Ham is being nice and trying to pay their way.

What I cannot understand is this issue "pisses you off" so much. It just people putting ideas up for evaluation and process improvement. Personally the cheapest people in Ham Radio I have met are the ones who show up to Hamfests and want to give one $5.00 for a piece of equipment that really worth several hundred. These people usually are trying to buy low and then in turn sell high at another Hamfest. This does not have one damn thang (using neck vernacular again) with the cost of QSLing.

I dont know what exactly your problem is but dont take it out on the rest of us.

#1) No one says traditional cards would go away.

#2) If DXpeditions have this monetary need why dont they accept "Plastic
Money" donation via secure transactions on the internet or dial-in. (May be
this is why even after sending SASEs they still wont send their cards, man
gotta remember the basic financial law Money Talks BS Walks).

>
>> No nation is "REQUIRED" to obey international agreements but it is considered good relations to abide by them. The International Telecommunications Union has a number of different radio services to consider. Amateur radio is not a significant part of the total radio picture nor does it matter in the real world of radio whether or not amateurs perform a service (non-regulatory term) to anyone but themselves.

>BUT!~ The AGREEMENTS STILL require morse. PERIOD!

No. The only thing in S25 (amateur radio standards) of the ITU-R is S25.5 which specifies that amateur radio license testing for any license having below-30-MHz-privileges is manual international morse code skill ("sending by hand and receiving by ear"). A singular standard, not any sort of plural agreements.

Each and every ITU standard and recommendation is always subject to review, study, and voting by ITU member nation administrations. Resolutions obtained by such voting are carried through by each member nation administration as Good Faith. There is no specific "law" which requires strict obedience to such agreements nor is there any "enforcement" agency to prosecute those who do not abide by agreements.

>And the US has
>signed and, in so doing AGREED, to abide by that agreement.

The administration of the USA (Department of State, FCC, and NTIA) voted on S25, the entire set of ITU-R amateur radio standards. They did not "sign" some specific agreements on amateur radio but rather accepted the ENTIRE set of standards and resolutions of the ITU, not just ITU-R but ITU-T, the "telephone" part of international communications in regards to tariffs, connections, standards for signalling, etc.

>What part of this is so hard for you to understand?

Only those documents of the ITU which are not in English.

>And, since such agreements
>have been around for so many years, AND the US has abided by said agree-
>ment(s) in the past, it IS reasonable to assume we will abide by the
>current one until it expires or is replaced.

You may wish to review the radio laws of the nation of Japan. They are a member nation of the ITU and they have a license class which does permit amateur radio license granting below 30 MHz which does not require a code test.

I have no problems with agreements. I have no problem with recognizing that agreements are NOT ABSOLUTE LAW. They are simply statements of Good Faith by government administrations. It is considered good practice to abide by agreements, but those agreements are not absolutes nor are they "enforced" by any supra-law enforcement organization (there is none).

>We KNOW changes are in the
>works, It will remain until 2003 to see what these changes are...at
>which time, we can agree to it or not.

I know only that some nation administrations have stated they will seek to change S25.5 at some time. That is public record, but is "known" only by those who get such information. For that matter, RS 8 (Radio Study group 8) of the ITU-R will take up S25, is taking up S25, as a whole but what is not yet public is the particular part of S25 which will be studied for change. Such studies are done before a WRC.

Actions of the future are generally indeterminate. There is no evidence than any human being has any power to "look into the future" to know exactly what will happen. At best, one can only presume certain trends in activities to carry on into the near future based on near-past events and conditions.

>All this ballyhoo about Amateur Radio's status as a Service, hobby, or
>whatever, is achieving nothing. It's like sitting in your car which is
>on jack stands. Your engine is running, your speedo is indicting 45 MPH
>and you are going nowhere.

Strange analogy that goes nowhere.

>It is a FACT, Lennie, that Amateur Radio HAS
>rendered service to the community, state, and Nation.

Is US amateur radio defined principally on its service (non-regulatory term)? Is it a (non-regulatory term) service or is it just one of many radio services of US civil radio? It is the only one which is defined specifically as a radio activity having non-pecuniary interests (that defining "amateur").

The discussion seems to concern itself on the word "service." You

have to differentiate between a type and kind of radio defined in
Title 47 CFR ("radio services"), a military service, or some public
service rendered to the nation and citizens by its citizens.

>It is ALSO a fact that it is a HOBBY. Some hobbiests like to
>render public service when they can.

Part 97, Title 47 CFR, does not specifically state that amateur
radio is a public service to the nation...it is a radio activity engaged
in by individuals for non-pecuniary interests. The word "service" as
in "radio service" used throughout Title 47 is a regulatory term
denoting type and kind of radio regulated.

Individuals in amateur radio, just like individual citizens in the
nation, can always be of (non-regulatory term) service. That is
highly commendable. What is not of commendation is the
self-enoblement of individuals who are NOT of (non-regulatory
term) of service but use the panoply and patriotic bunting to
label themselves as being of (non-regulatory term) of service.

>I would like you to tell the local county ES officer that Amateur Radio
>wasn't a service during Hurricane Hugo. You have earthquakes, we *some-
>times* have hurricanes. During the floods in the Mississippi Valley, you
>are trying to tell me that Amateur Radio WASN'T involved? HORSE hockey!

You seem to be very, very sensitive to self-perceived negativisms.
Such is your particular problem, not mine. I mentioned nothing of
hurricanes or floods. The original posting of this thread was an
emotional tirade of an extra class radio amateur berating all other
radio amateurs for not doing enough for emergencies, such as
recently happened in the nations of India and Pakistan. I replied
with public information on earthquakes that already happened over
7 years ago in the state of California. I also gave a website for the
California OES and Auxilliary Communications Service (ACS).
I asked a question of "where were the radio amateurs during the
Northridge Earthquake of 1994?" Only one radio amateur in this
newsgroup gave a specific-detail source of where those amateurs
were...a few others seemed to explode with "outrage" even
though none of them had participated in that earthquake. None
of those listed any specifics in public view, only made generalities
and self-serving "patriotic" statements.

Now go back to the original posting under this thread and judge for
yourself just who is berating who.

>I asked this once before and I now ask it again: Can we agree that
>Amateur Radio is a R-E-S-O-U-R-C-E which has potential for assistance
>in local, state, and international disasters? Can we call it a
>"RESOURCE" and let it go at that?

US amateur radio is already defined by regulation. What you seem
to be seeking is self-glorification and enoblement courtesy of a
federally-issued amateur radio license. US amateur radio is

basically a hobby and those engaging in that radio activity not for pecuniary interest are hobbyists.

>Lastly, IF, in your ever-so-knowledgable opinion, Amateur Radio is JUST
>a "hobby", why does FCC designate certain HF frequencies as EMERGENCY
>frequencies during disasters? Hmmmmm? This CAN be documented by contact
>ing FCC (1-800-CALL FCC) and ASKING them.

All US allocated emergency frequencies are given in Part 2, Title 47 CFR. That and all other Parts of Title 47 (to about October 1998) are free for download from the FCC website (under OET page documents) or the US Government Printing Office website. Printed copies of US law or regulations may be obtained from USGPO branch offices in over a dozen major cities or by mail order, but those cost money. Public-cleared military doctuments may also be obtained from the National Technical Information Service (NTIS). NTIS offers over 14,000 Army and similar publications for sale. I recommend NTIS TM 10-412INQ for large groups with appetites ($79 to US postal addresses). Others may have different tastes.

Under certain conditions the FCC will request certain frequencies (not just HF) in amateur radio bands be used for certain emergency conditions. That is NOT under discussion, was never intended to be under any discussion. Your question in that regard seems to serve nothing but an attempt at misdirection.

Now you go back to the first post in this thread and judge who was berating who when the USA has already had much experience with earthquakes and other natural disasters. Hint: It was done by someone who is an example of a licensee who holds the "highest" class lincense in US amateur radio.

Mr. "Last Word" Lennie,

>Here is a question. Have you ever heard of Military Affiliate Radio
>System (MARS)?

Yes, ever since 1952. Between 1953 and 1955 I was one of the operators of a transmitter at Army radio station ADA which had 3rd priority use for MARS single-channel RTTY. The MARS "station" for the US Far East Headquarters was an office at the Pershing Heights main building. Receivers were at the remote Receiver Site shared by USA and USAF NW of Tokyo. [ADA had 36 to 40 transmitters serving the Far East Command]

>Who makes up the majority of the member stations of this system?

5000 members who are over 17 and hold valid US amateur radio licenses *PLUS* the sponsoring agencies of the U.S. Army, U.S. Air Force, and the U.S. Navy and their personnel. The Military Affiliate Radio System is sponsored by the Department of Defense and is the overall command agency of MARS activities.

>I'll fill you in, ole "Last Word" Lennie. It is HAMS.

See the acronym words: MILITARY Affilicate Radio System. The three principal military branches do their own daily command and control for their respective MARS functions. More on this can be seen on -

http://www.asc.army.mil/mars/ (Ft.Huachuca, AZ)

http://public.afcp.scott.af.mil/public/mars1.html (Scott AFB, IL)

http://navymars.org/ (USN, USMC, USCG)

>They pass traf-
>fic from overseas personnel, provide phone patches for service people
>and their families, and deliver messages and greetings.

Licensed radio amateurs can assist MARS in such public service roles. 5000 do so. However, MARS is essentially a secondary backup radio system to existing military branch radio communications plus existing to provide emergency communications in the USA and territories. Unlike non-member radio amateurs, MARS can utilize spectra other than the allocated amateur bands since MARS exists under the DoD.

>They do this
>on a volunteer basis. During Desert Storm, I myself passed a number of

>messages from local servicemen/women here serving there to their
>families here at home.

That is commendable.

Since the Gulf War of 1990-1991, Internet connections have proliferated in all branches of the US military. It is now possible for most members of the US military to communicate directly with family and friends using Internet facilities.

>NOW. I want you to make more of a fool of your-
>self by telling me that hams do NOT provide service to our Nation and
>its citizens.

Why do you want others to make fools of themselves? Is that the only way you can "win" message arguments?

>Len Over 21 wrote:

How does an example of amateur radio's highest class equate to "foolishness" about the Military Affiliate Radio System? How does repetition of an example of amateur radio's highest class using personal insults serve any point in Oxendine's message?

Dave's statement is absolutely true. You're adding the if/then qualifiers, which may also make your statement true, but Dave's statement has no such qualifiers and is also absolutely true.

And I thought you had a logical mind -- silly me!!!!!!

It kinda already is handled that way.  The license that permits you to
operate Morse on HF requires you to know some Morse code.

Posting a second time within 9 hours doesn't make it go away.

I downloaded Jon's link to the Hanssen Affidavit and found the
112 pages rather fascinating. Thank you, Jon.

Nowhere does the document mention any amateur radio
license call sign. Why are you disturbed?

Hey Dave, I've no doubt that you've forced yourself to endure in this
debate.  I think that's what may the applicable use of the word 'force'
here.  I forced myself to learn code.  I wanted to, but I nevertheless
met the conditions of Cecils definition of force.  I had to make myself
sit down and practice instead of sitting down and watching TV.

Nope it's not, Hams. HF hams *are* forced (required by circumstances)
to learn Morse code. Why do so many of you guys have reading problems?

You were "required by circumstances" to learn Morse code. That's
the definition of being "forced" to do it.

I think we were discussing motorcycles.

So I find myself lead by this inescapable logic to the conclusion that
since carbuerator repair isn't required for a drivers license, Morse
code shouldn't be required for any other license. :-)

Not the definition I was referring to, but also true.

One is forced to meet ALL of the requirements, because only one type of
license is offered.

are you going to create that group and do anything with the reports, or is it
just a bit bucket??? i don't see it in the group list now.

I would have no problem with that, but the pro-code group might think there's
still a reason to know it if you want to use HF phone. I've yet to see any good
reason.

Then you should read what you quote. I mentioned criteria having relevance. You then make a comment about "written hazing ritual" when you could read for yourself that was not what I meant. I see that as twisting my words. As for our respective "biases", it's obvious that you have a pre-conceived conclusion as to how things ought to be, and will only allow facts that suport that conclusion, excluding all others which may disprove it.

So apparently you think that citing carburator repair rather than manual
gearbox testing makes a big difference in Mr. Sohls proof about Morse
code and amateur radio licenses?  I guess I shouldn't be surprised.

You just don't get it, do you? No one said that it was mandatory to obtain an
amateur license. The subject is the relevance of certain test requirements to
obtain a license. Why is it so hard for you to stay on that?

Please point out *specifically*, in the quoted material above, where I said
anything about 5 WPM being high speed. You've got a serious comprehension
problem.

The point is that what someone is going to do after their license is
granted is irrelevant. The requirements are based upon the privileges
which are granted by the license, not the desires of the applicant.

Your writing that I am wrong does not make it so. What the hell does a
prudent man have to do with this? What happened to the original
definition you brought forth. Have you now abandoned it in favor of
this "johnny-come-lately" one you are now using?

You are a genuine homespun BSer, Cecil.

You mean you screwed up and chose the wrong definition and now are
forced to take your lumps. That it chafes you to be called on being
wrong doesn't bother me.

I often get free coffee for my opinion. You mean you don't?

It overlaps? How does that take place, pray tell. Did you have the
lighter book under the one which is too large (formerly heavy) to open?
Why didn't you introduce the second definition at the same time as the
first? Was it because you were beaten over the head with the first one?

> You don't have to be beaten with a stick to have force used against

Yeah and your attitude is now *forced*-strained, unnatural or affected
(Random House College Dictionary).

> > Why the amendment (or are you attempting to use

There was no diversion. You simply switched definitions after choosing
the wrong one. Then you added the *if* portion. You can't debate
without injecting new information, used selectively.

Twist in the wind.

Do you have a problem with geography? Texas is east of California, unless
you're looking for a "long path" route.

The *if* implies options. No one forces you to operate a motorcycle. No one forces you to to take an exam for a motorcycle endorsement. No one forced you to take a morse exam.

I can hear it now (Cecil to state police), "I was required by circumstances to ride this motorcycle without insurance".

You should do comedy clubs, Cecil.

...not necessarily. There are numerous circumstances in which the frog
could still bump his ass. There are a number of circumstances where,
even if we had meat and bread, we couldn't make sandwiches. Yet you
blindly state that the statements are true. Tsk, tsk.

> So is, "If a ham is to have legal HF ham privileges, he is forced to take

And you are stating that there is no way that the "then" portion is
false. I strongly disagree. I further state that the if implies
options.

> If a ham wants legal HF ham privileges then he is forced (required by
> circumstances) to pass a Morse code exam. That's a true statement, Dave.
> There's just no getting around it. The force of the FCC is behind the
> Morse code requirement.

Your statement does not become true because you insist that it is.
No one is required to learn morse or to take an FCC exam. Both are
entirely optional.

I hope you don't continue to drink to excess, Cecil. You've certainly
changed the definition from the incorrect one you initially brought
forth. That isn't expanding. It is changing the definition. I rag on
you for that.

You were not forced to learn morse code. I was not forced to learn
morse code. Leonard H. Anderson certainly hasn't been forced to learn
morse code. "Forced - enforced or compulsory" (Random House College
Dictionary)

> Hams with HF privileges are forced to learn Morse. They are "required

```
> Morse code requirement.

What's the matter, Cecil.  Don't you like your first definition any
more?  I'd really enjoy hearing tales of how you were compelled to learn
morse.

Neat logic lesson, Cecil. The following statement is also true:
"No person is forced to obtain an HF ham ticket". So is, "If a person
does not desire an HF amateur radio license, then he need not learn
morse code."

Sure, both are valid but their meaning is not the same. You chose the incorrect definition and have since abandoned it for one more to your liking. No one has to be omniscient or a guru to see what transpired.

> "I am forced to endure Cecil's endless games" is a true statement

...and you mean that the use of the "if" word implies options to do or not do something. I have not stated that your "if" statements are false, only that, in typical Cecil fashion, you added them after making a blanket statement.

> If a ham is to obtain HF privileges then he is forced (required by

>
> Sorry, Dave, that is a true statement.

Sorry, Cecil. I don't buy the "then" portion of your statement.

International treaties such as the Radio Regulations have the force of law in the United States.

If one is found violating a provision of same which does not have a counterpart in FCC Regs thw individual will receive an FCC Notice of Violation (FCC Form 793 may be used) that instead of starting with "You appear to be in violation of Section xx.xxx of the FCC Rules" will start with "You appear to be in violation of Section XXX of the International Radio Regulations". The Communications Act does, in fact, obligate compliance with treaty requirements.

As you know, US Government stations and foreign radio stations are not subject to FCC Rules, and when one is found in apparent violation of standards derived from the International Radio Regs, they are cited (FCC Form 74) as apparent violations of Section XXX of the International Radio Regulations. The Form 74 is sent to the U S Government agency frequency manager or the foreign government Adminstration, as appropriate.

If the FCC receives an equivalent notice from a foreign Administration that an FCC-regulated station was found in violation of the Radio Regs, the FCC turns around and issues a Form 793 to the licensee citing the section of the Radio Regs as reported by the foreign Administration.

When a specific Administration files a complaint with the ITU that another Administration is intentionally disregarding or

```
  violating some provisions of the International Telecommunications
  Convention, the Radio Regulations, the Telegraph and Telephone
  Regulations, a specific Agreement, or a ruling of the IFRB,
  where an exception was not taken at the time of the signing of
  the treaty or Agreement in question, the matter is referred to
  mandatory arbitration under the auspices of the ITU Secretary-General,
  per all such agreements.

  That was the route we had to take when Radio Omdurman (Sudan)
  was intentionally causing harmful interference (Middle Eastern
  politics at work) by operating 2 kHz offset from a MF broadcast
  co-channel assignment with Kol Yisrael (Israel) while I was the
  latter's ITU liaison engineer at the Israeli Ministry of
  Communications (equivalent of the FCC) in the mid-60s.  It took
  about 2 years but Omdurman was eventually brought into compliance
  by order of the ITU Secretary-General.

  The Radio Regs are, in fact, enforceable treaty.

News for you Lennie -- in "your time" in the 50s, the "A" in
the acronym was AMATEUR, not "affiliate" - certainly not
"affilicate" (yeah, cheap shot....) It was changed
sometime later. In that era, what is now known as "Navy MARS"
was known as "Naval Reserve Amateur Radio". See old copies of
QST.

IIRC one must be a licensed amateur to get authorization to
operate one's station with a MARS callsign in MARS activities.

Wow!,

You guys are a tough crowd. At first, I was little surprised at you, Dick. But
then I realized that you weren't the Dick I thought you were. No pun intended.

Harmonics are simply signals from a transmitter or oscillator occurring on
whole-number multiples of the desired operating frequency. End of story.

If you look at the title of this particular thread, you'll notice the word
"freebanding" contained therein. It's easy to forget that freebanding also
includes operation on the frequencies directly below the lower limit of the
citizens band, 26.9650MHz. I'm sure that all of you "seasoned" amateurs are
aware that the 6 meter band, 50 thru 54MHz is open to US operators holding
Technician class licenses and above. I'm not sure what all the excitement is
about? Is it because RM called it the first harmonic? That's just symantics, I
don't think there's anybody in this group, with an ounce of gray matter, that
doesn't understand the implied meaning of his statement...whether technically
correct or not. I refuse to believe that a group of grown adults could be this
petty, I'll just assume then that it was merely a "misunderstanding."

Now back to Dick,

>So, then he is deliberately a very willing renegade, an absolute radio
>outlaw, and has no desire nor intent to change his stripes. We see.

Well Dick, I'm not sure if you're referring to me n the previous post or Mark,
who made the original proposal. That first sentence describes neither of us, so
I don't really see the connection there. I'm NOT a freebander and from what

I've read of Mark's original post, he HAS changed his stripes...and encourages others to do the same. I respectfully suggest you reread his post.

>And we also see that the FCC is not particularilary interested, and is
>MORE interested in giving him a freebee ham radio license or upgrade,
>and ARRL is salivating to sign him up. Neat.

I'll agree with you on the FCC's disinterest. HOWEVER, nobody gave me a freebee ham radio license and I was a member of the ARRL before I became a licensed amateur. I "earned" my GROL long before that and my previous involvement with 11 meter radio laid a nice rudimentary foundation, thank you. As for Mark, I'm pretty sure he too is already an ARRL member and quite frankly, I personally wouldn't be too surprised if he were already a licensed amateur. Just a gut feeling.

I did attempt to satisfactorily answer a statement re. how the ARRL has "attacked" CB. If calling it like it is makes me a renegade, then I accept the title with pride. If you re-read the thread perhaps you'll get a better feel for the context in which some of these posts are worded.

73 de Bert
SSB411D

P.S. Thanks RM for the defensive support, but in the future don't bother replying. Statements like these are merely a con"troll"ed effort to fan the flames. Thanks again.

>Go reread the ORIGINAL post. The one concerning RM-9807. By "attacking"
>RM-9807, the ARRL really stuck its "two cents" where it didn't belong.

Hold on a second there.

Why doesn't the ARRL (or any other interested party) have the right to comment to the FCC? Would you say the same thing about a cb group or individual commenting on an RM about the amateur radio service?

> And
>that
>concerned "legal" 11 meters.

It is about changing the definition of what is legal in that service.

>That was an an attempt by CBer's to address its
>own "concerns" in DC. Perhaps it would have died all on its own, but disagree
>or not...the ARRL's concerns should be confined to amateur radio.

They are! Legalizing long distance communication on cb would affect hams.

>Don't like
>a
>service paralleling the amateur service?(As meritless an arguement as that
>is!)...let the ITU agreement handle it, NOT the ARRL!

The citizens radio service is not meant to parallel the amateur radio service - never was.
>
>You'll probably find that many of us agree with the illegal operators on 10
>meters.

Agree with them how?

>To call them "11 meter guys" is a perfect example of why Mark's idea
>has come about.

They are not hams. Why are they operating illegally?

>This combined with the league's self "involvement" has
>brought
>us to this point. The "concern" is very accurately placed. You can rest
>assured
>that before I cast my next vote, I'll ask my division(Hudson) director and

>under 30MHz. Good day.

All interested parties have the right to comment to the FCC on proposed actions. Freedom of speech and all that. Why would you change that basic right?

>
"Will Hunting" is a fictional character, not a real person. He is portrayed as a super-genius who has taught himself the equivalent of several doctorates in a variety of subjects, but who works as a janitor and gets in trouble with the law. He may have lots of knowledge, but he doesn't use it. He avoids the responsibility of actually DOING anything constructive besides custodial work until the very end of the movie.

He knew the price of everyhting and the value of nothing. (Shaw's definition of a cynic).

Besides, how smart can a guy be who almost let a gal like Minnie Driver get away?

Why limit it? We can have two debates: one on things that would have prevented
the collision in the first place, and one on things that would have prevented
the loss of life if the collision had occurred anyway.

For example, a bigger rudder would have allowed the ship to turn slightly
faster, and avoided the iceberg completely. Better steel might have reduced the
damage enough so that rescue ships would have gotten there before she sank.
(Almost all of those lost died of hypothermia from being in the cold water.)

>This sure beats debating the CW testing, and exam
>issues, at least for a while. 8-))

Those are dead issues, anyway. The code test in the US is reduced to the minimum, other countries are rapidly following suit, and not much else can be expected before the treaty requirement changes. The writtens won't change much because the FCC doesn't want them to - best we hams can do is make the question pools bigger and better.

> Take care.
>
You too! The lessons of Titanic need to be learned by each generation. The biggest single cause was plain old carelessness - lack of attention to detail.

Far as I can tell that's where Cecil's argument breaks down. When one forces himself to do something is he really being forced? Not at all. He has a choice to not force himself, but he declines.That's self inducement instead of force.

Yep. And if you only want to operate Pactor you've got to learn both
Morse code and all that other non-applicable stuff.

Evidently you don't accept that dictionaries have multiple definitions of many words because they apply differently in different circumstances. I do.

I also know from years of experience that one of your favorite ploys is to choose one that is totally inappropriate for the circumstances in attempting to make a ppoint that is totally wrong. Just as you are trying to do here. Won't work.

Which means he was NOT forced. Circumstances do not force him go get a ham radio license. Some people decide that exactly and don't get one. So your point (that you are wearing on hour head) is moot.

Oh. So you know what is reasonable and no one else, including the FCC nor governments who make treaties, does. We see. Right.

 Not at all. We KNOW that you routinely misuse such dictionary
definitions incorrectly to suit your own purposes.

Sometime, when you finally realize that all knowledge isn't between your ears, you will understand that everything pertaining to most subjects isn't required to be recorded in each post. When Jones said "when you touch the anode contact of a TV picture tube it doesm't matter where your other hand is" that is an excellent example. It DOESN'T matter, yet it was YOU who read something into that statement that wasn't there, and now you blame me for knowing what he was talking about.

Is there anything the you and Newington doesn't know all about? FRhetorical question, of course, since we already know the answer.

This is true, and it also shows how ridiculous Dave's "endorsement" argument
is.

How can I possibly misuse something that is down in black and white
in the dictionary? Seems your ignorance is showing.

Some forced tests are obviously reasonable, e.g. pilot's tests.
Some forced tests are obviously unreasonable, e.g. the requirement
for a deaf person to copy Morse code by ear per S25.5. Some forced
tests are debatable, e.g. Morse code tests for all HF hams.

Why can't the Morse code requirement be handled the same way?

Like I said, you evidently are not informed on the subject of harmonics. The FIRST harmonic is the fundamental frequency. It's the *second* harmonic that is twice the fundamental. And twice 27 mHz is 54 mHz. Exactly the Top End of the 6 meter band. Neither I nor any other ham hangs out up there.
And why is it the first anyone hears of harmonic problems on 6 meters from high powered CB comes from a freebander?

So, then he is deliberately a very willing renegade, an absolute radio outlaw, and has no desire nor intent to change his stripes. We see.

And we also see that the FCC is not particularily interested, and is MORE interested in giving him a freebee ham radio license or upgrade, and ARRL is salivating to sign him up. Neat.

Nobody has ever said he was forced to get a ham radio license so your
statement is just a strawman diversionary argument. What was said was:
In order to obtain legal HF ham privileges, he is forced to pass a Morse
code exam. Whine all you want about it, that statement is true and is
correct English.

Evidently you don't comprehend that the person who makes the statement gets to choose the definition of the words he uses. Rail and whine all you wish. The following is a fact: In order to obtain HF ham privileges, a ham is forced to pass a Morse code exam, i.e. it is "required by the circumstances" (the FCC rules). "forced - required by circumstances"

So "sound byte" learning is as effective as detailed reading on the
subject? That *is* news, and I majored in education.

> and the reason for the correc answer.

Which of course is NOT included on the question pools.

Sure, a well designed and written test can be a very effective learning tool, assuming that it is designed to TEACH, not just to provide a method of licensing with little or no intent of anything else.

Nowhere I know is merely passing a test in itself indicative of anything more than passing a test, with no further detailed description of how it was done. Ham radio is the most glaring example with which I currently am familiar.

BZZZZZZ yourself. The fundamental is the first harmonic both by definition and by common usage.

Jon

Lucky then that the FCC does see it as an unjustifiable
requirement. The issue of forced, mandatory, etc. is just
a semantics diversion anyway since I dare say no one has
ever raised that arguement in the FCC responses. I'm
sure the FCC wouldn't give much, if any, consideration to a
commentor that argued...No one is forced to get a ham license
so if they don't like a requirment they have the choice not to be
a ham.

>Now what do we do about that darned "forced"

YOU are the one saying that..NOT me. Anyone can make whatever
argument or comment they want...BUT it is always the pro-code test
folks like yourself that run the No theory up the flagpole.

The point is that neither is a valid requirement for the license
in question. You may disagree regarding code for HF ham
licenses, but I don't see your position being supported by
the FCC.

>> >Riding a motorcycle is not mandatory in West Virginia.

>creating a new class of victim.

No victim needed, no help needed to make the point
with the FCC that code is passed its prime. The FCC knows
it is and only the treaty is keeping the code test requirement
going now.

>It is my observation that things which are deregulated or less regulated
>seldom work as well as they did under regulation.

A liberal mindset to be sure. Only the government can be trusted
to know what everyone should be doing.

Cheers,
Bill K2UNK

Everyone is free to offer their opinion and arguments as
to what is reasonable. The FCC ends up making the decision
in the end based on their analysis. Do you have any doubt
as to the position that the FCC has regarding the value or
need for continued code testing?

Cheers,

True at that point in time. It does not, however, forclose
the person attempting to get the requirements changed.
That is the point I believe many PCTA folks want...i.e.
accept the requiremnts the way they are...after all, I did
it, so should you. If that mindset made any sense at all,
the diver's license tests would also require knowledge and
skill driving a vehicle with a manual gearbox.

Cheers,

Does your state require a license endorsement to drive a
manual gearbox vehicle even though you take and pass
the test using a car with an automatic transmission?

Cheers,
Bill K2UNK

When you can accurately say it without the prepositional phrase it will
have some meaning.

> And why is it the first anyone hears of harmonic problems on 6 meters
> from high powered CB comes from a freebander?

Freebanders operating above channel 40 (27.405 MHz) would put any harmonic in the passband for TV channel 2. It would show up as noise on the video, and would be above 54.810 MHz. The video lower vestigial sideband crap from a local TV channel 2 station does far more to garbage up the 6m band than anything else I have heard. The upper 2 to 3 MHZ near the station is unusable, particularly on FM. The sideband sub-band section of 6m is normally not to bad, as long as you don't point your antenna at the TV station.

The video carrier for channel 2 is located at 1.25 MHz above the bottom of the channel so that puts it at 55.125 MHZ. The maximum power that can be used is 100 KW on channels 2 to 6. The spec's I have requires any video signal 1.25 MHz or greater, the lower sideband radiation must be 20 db below the carrier level or more. This means you can still have a huge signal at the top of the 6m band, and falling off as you go lower.

Frankly I think the local TV channel 2 station is much more of a problem on 6m than anything coming from a CBer's splatter box special foot-warmer, or a crappy cheap 10m export radio.

"if one wants"?  Not forced.  Voluntary.

I've stated that I do not.  The argument I have is with your improperly
selected definition.

Wait a minute. "required by circumstances" wasn't part of the
definition you provided earlier. Are you amending your definition?
An HF amateur license is not mandated. Once chooses to obtain one.

> > Now what do we do about that darned "forced" written test?
>
> Nothing. Some forced tests are reasonable, e.g. a driver's test.

It is not a forced test, Cecil. It is not mandatory to obtain an
amateur radio license or a driver's license.

I'm still not buying either the definition or the premise.

Nah, that's not the reason, Cecil. We can't communicate because, 1) you haven't settled on a definition of the word "forced" yet (let me know when you've settled on one definition and wish to stick with it) and 2) you are intent on playing word games.

I'm tiring of this silliness.

You can't even stick to a single definition.  "required by
circumstances"; is that your final answer?

I think it must have been my elementary school teachers, the ones who instructed me in the use of a dictionary who died and left me in charge of definitions. If I found you trying to use the definition of a computer bus to define the kind which drives down the block discharging passengers, I'd laugh, call you a goofus and point out that it is as silly as your first choice of definition for the word "forced".

> The fact remains: In order to gain legal access to the HF ham bands,
> one is forced (required by circumstances) to learn Morse code, if one
> doesn't already know it.

...more panicky wordsmithing? We've now added the clause, "if one doesn't already know it" to your second definition (not the one you originally trotted out) of the word "forced".

Nobody is forced to learn morse code, Cecil. You're looking sillier with each post.

Nope.  It has not made obtaining a motorcycle endorsement any more
mandatory than an amateur radio license.

There's no practical or written exam required for a marriage license
either.

How the hell do you know what matters to me? I don't consider 5 wpm to
be high speed morse. Are you now telling us that you consider it to be?

Dave Heil wrote:

> The argument I have is with your improperly selected definition.

That simply cannot be, Dave. I very carefully selected the definition

directly out of the dictionary to convey the exact concept that I wanted
to convey. I chose to use the word. You are not God-like enough to
choose my words for me.

Amending? Not really. I just have two dictionaries. "Required by circumstances" is the definition of "forced" from my unabridged dictionary. I get a hernia every time I pick it up so I don't open it very often.

> It is not a forced test, Cecil. It is not mandatory to obtain an
> amateur radio license or a driver's license.

Nobody said it was mandatory to obtain an amateur radio license or a driver's license. To imply that someone did say that is simply a strawman argument because you have run out of logical arguments. In order to obtain a driver's license, a driver is forced to take a driver's test. That is a perfectly correct English language sentence, Dave. Your disagreement simply shows your ignorance.

What's wrong with "required by circumstances"?

More pap.  I am:

forced to obtain a job.
forced to go grocery shopping.
forced to feed the dog.
forced to go out and pick up the newspaper.
forced to learn morse code.

Damn all this endless torment!

Find a definition which suits you yet or are you still finalizing it?

Dave K8MN

It already has meaning, Dick, and the prepositional phrase is part of
the meaning. Are you ignorant of conditional statements? To be more
precise: If a ham is to obtain HF ham privileges then he is forced to
pass a Morse code exam. That is an absolutely true statement.

Every definition that I have used means essentially the same
thing. "Done or produced with effort" means essentially the
same thing as "required by circumstances". Both definitions
are equally valid. One is from one dictionary and one is
from another. Do you object to all dictionaries or just some
of them?

Of course they are, Dave. If I want to operate a motorcycle legally
in Texas then I am forced (required by circumstances) to take a
motorcycle test. If you say that is not a true statement then you
are simply lying.

You have completely missed the point so far, Dave. If one is to operate
a motorcycle legally it is mandatory that one take a motorcycle test, i.e.
one is forced (required by circumstances) to take a motorcycle test in
order to avoid illegal operation.

Truckers from "back east" are S-7 to S-9 here in Southern California. Hope Reilly knows about this. This posting is so we can assist in trying to locate these guys (Texas?). These guys are now appearing daily.
Thanks, Ken, WB9YCJ/6

Here's something interesting:

HANSSEN, ROBERT P, K9QVL (General)
9414 TALISMAN DR
VIENNA, VA 22182
Issue Date: Sep 15, 1997
Expire Date: Sep 15, 2007
Date of last Change: Sep 15, 1997

Same name and address as the FBI agent arrested for spying. See:
http://news.findlaw.com/cnn/docs/hanssen/hanssenaff022001.pdf (600+ kB).

Sure you do. Several times you've given a dictionary definition chosen
from one of several meanings. Several times you've chosen the wrong
definition to suit the situation. I say that you HAVE chosen
definitions which suit your purpose and ignore definitions which do not.

Call it semantics again if you like, I'd use the word "pointless" rather
than "silly". Since you've told us that you're not a contester, it's
really no skin off your nose.

You were wrong the last time you trotted out this crap and you're wrong
now.

I understand the definition to be applied to the situation, Cecil.
Learning morse is not "compulsory" or "forced". Either you are unable to
properly use a dictionary or you are trolling.  There can be no other
explanation.

> > My state requires a motorcycle endorsement in order to ride a motorcyle.

> not with me.

I have no argument with the dictionary definition.  I am not forced to
obtain a motorcycle endorsement.  It is my choice to obtain one.  Riding
a motorcycle is no more mandatory than obtaining an amateur radio
license.  No force is involved.

"Once one decides" is a really important clause, Bill. It certainly
implies choice. Obtaining a ham ticket is not mandatory. If one
decides for himself to obtain one, he meets the requirements for
obtaining it.

I know what your side believes and you know that I do not agree with

your premise, IMNSHO. Now what do we do about that darned "forced"
written test? Think we should take out all of those pesky technical
questions? After all, if we simply know the regs and a few safety
rules, we can always send our equipment back for factory service.

CPR relates to motorcycle as morse code relates to ham radio? I'm not
buying.

...and it would be a state's "job" in ensure that motor vehicle regs for
licensing are justifiable. I'm still not forced to obtain an amateur
license or a motorcycle endorsement. I'm not willing to assist you in
creating a new class of victim.

It is my observation that things which are deregulated or less regulated
seldom work as well as they did under regulation.

Amen!

I recently reinstalled my 10 meter rig in the car and I have been monitoring 28.085 (AM mode) while driving around. It is astounding to hear how many truckers are using this as a "company" channel.

I hear RTTY and voice announcements being made, but it appears that the truck drivers are chatting while going down the road within one mile of each other. Therefore, it is difficult to jam them or to get their attention. They probably have their radios at full squelch.

The latest QST addresses this issue in a 2-page article. If hams are interested in defending 10 meters against intruders (and want to do it "by the book" as the ARRL recommends), it will take a lot of stations monitoring to document illegal activity and help locate it.

A couple of years ago, I nearly had two of the truckers in sight. They were coming toward me and the signals were getting quite strong. They stopped transmitting just before reaching my location. I was going to get the names of the company and write the president. (This has worked occasionally in the past. Typically, the company president confers with his legal department and then sends the supervisors into the yards to check for FCC Type Approval on the radios).

Now, a question.......do we need a central clearing house for information so it can be tabulated by computer to look for patterns?

Dave Heil wrote:
> Learning morse is not "compulsory" or "forced".

Yes, it is if one wants to operate legally on the HF ham frequencies.
From Webster's: "forced - enforced or compulsory - required by
circumstances" The FCC enforces the Morse code requirement for HF hams.

> I have no argument with the dictionary definition.

Of course you do, Dave. That's the only argument you have.

> Obtaining a ham ticket is not mandatory.

That's a straw man argument because no one said a ham ticket is
mandatory. Morse code *is* mandatory for an HF ham ticket. It is
"required by circumstances" which is the definition of "forced".

> Now what do we do about that darned "forced" written test?

Nothing. Some forced tests are reasonable, e.g. a driver's test.

If he wants an HF ham license, he is forced to learn Morse code. From
Webster's: "forced - required by circumstances".

So you assert the Webster's dictionary definition of "forced - required by circumstances", is incorrect. Take it up with the publishers. I, for one, will continue to honor the conventions of the English language. To do otherwise is to try to confound the language for ulterior purposes.

The *fact* remains - in order to gain legal access to the HF ham bands, one is forced to learn Morse code, if one doesn't already know it.

Of course, Dave, that's what people do. Does a computer bus have wheels? Of course not. When I choose the word "bus" for something inside a computer, do you object to that usage because it doesn't have wheels? Who died and made you the great white father of definitions? When I use the word "forced", I am using it correctly and in context. I chose the usage of the word. Trying to dictate the contextual definition of another person's statement is just the despicable act of a bully.

The fact remains: In order to gain legal access to the HF ham bands, one is forced (required by circumstances) to learn Morse code, if one doesn't already know it.

One of the ways to combat this is to find out who the driver works for. If it is an independent driver there isn't much you can do, but if it is a UPS or other company driver a prompt letter to the company headquarters about the use of their equipment in the commission in a federal crime will certainly get their attention. Make sure you send a copy to Hollingsworth.

Now let me get this straight Darryl....

We now need a system of "E-QSL's" because (really) hams are
too stinking *cheap* to spend 34 cents postage to put their QSL
in a envelope..??

This is the root cause (above) which is REALLY driving this issue!
Is it no? Be honest now. What a bunch of tightwads you
hams are. When's the last time GW saw sunlight opening up your moldy
wallets? And I thought all these guys were tighter than a crab's asshole
at hamfests - hoy.

I really think cost is a secondary factor. The main factor is that e-QSLs
are
easy and fast. I known hams who have waited over a year for a QSL card.
Cost is important as well. There is the cost of printing and the cost
of mailing. $0.34 isn't much until you have to mail out 30,000 cards, then
we are talking real money. Even someone like me who only makes
a few thousand contacts per year it still adds up.

The other issue is Trusted E-QSLs will help streamline the awards process.
Not only in the amount of time it takes to process the award, but in
the time required to collect the QSL cards.

I have been getting a lot of interest in email about this concept.

Later
Darryl WA1GON

 Actually if they did away with all of ham radio except ragchewing on
CW it would be no skin off my nose. But I guess what you're really
saying is why should I care about false signal reports in a contest if
I'm not a contester. I don't. I was just interested to see if there
was any logical explanation for this "pointless" practice. Apparently
not, and judging from some of the abrasive responses (by others) it is
a rather sensitive subject...  :-)

Oy vey, what bullsnot! You are definitely on the right track concerning e-QSLs but all this damn bureaucratic rigamarole red tape nonsense over them is preposterous.

You work a guy and he sends a plain and simple e-mail conformation. "This is to acknowledge my SSB contact with WX56Fink on 14.279 at 0046 UTC, Feb.20,2001. Ur sig 5/7 and so forth and so on." You then print it out and if need be send it to the ARRL for your WAS or WAC or whatever. If they accept it,fine. If not, they're cutting off their nose to spite their face. Why my cavalier attitude?

One has to be just plain stupid not to know that computers are overwhelming ham radio in interest/popularity. The ARRL wants to do everything possible to keep their own tuchuses afloat so why would they reject such down to earth e-QSLs? You think they're out to make it tougher on Joe Ham? And besides, we are a cut above the rest, aren't we?

By nature, QSL collectors are Boy Scouts except of course if they nowadays lean toward homosexuality which is taboo. At any rate this whole concept of e-QSLs is excellent. The price of postage keeps rising and so do QSL cards. Naturally if the ARRL goes along with the idea, their QSL printer advertisers will go crazy and try to convince them of the fact that every e-one will be bogus. But in the long run they'll shut up because it's a losing battle for them.

"Wags" you're a flaming genius but enough with all this pomp and circumstance regarding the formalization and authenticity of those cards. Want to work the country of "Goochaboola." Nowadays one can either listen for it on the bands and send a signal at 186,000 miles per second to snag

it or look for a newsgroup, alt.goochaboola.politics and work it that way.
Want to keep ham radio alive? INCORPORATE computer QSLs into it instead of
scoffing at the idea. How about an autograph, "Wags?" You're a mover and
shaker.

If I remember reading the FCC's reasons for denying the petition correctly,
it was the FCC that made the comment, about not creating a service
paralleling the Amateur service, not the ARRL. The ARRL's concern, again
from what I remember reading, was allowing CBers to legally work DX would
only encourage further use of amplifiers, a practice already out of control
on 11m as it is among other things.

I've already been notified I'd be a pariah if I opposed this idea, so my continued opposition can't hurt me anymore, I guess.

There are four reasons (at least) why this idea will not be widely adopted.

#1) Traditionalists (like me) who place high value on paper QSLs will not participate in an eQSL scheme.

#2) Most major DXpeditions derive much of their funding from donations received in the QSL process. They are unlikely to participate in scheme which diminishes that funding channel.

#3) Perhaps less than 50% of the DXCC 'entities' have the required telecom infrastructure to support routine participation by the average resident.

#4) ARRL is well down the path of deploying LOTW which will become the DXCC "eLog", and thus the 'solution of choice' among serious DX players. Any other scheme is second-tier right out of the box.

73, Pariah, K0HB

Good luck on this one now!

If that's intended to mean that I haven't passed any amateur licensing exams, I suggest you learn how to use an archive service, such as deja.com. You'll find my callsign postings I've made within the past year. When you do find it, you'll also find that I have been licensed as an Extra since 1997, well before the current re-structuring was put into place. I quit posting my callsign to prove a point, and that is that no matter what your opinion is, it seems that if no one posts a callsign that shows you've passed a hazing ritual of high-speed morse code testing, some people think that you're opinion doesn't mean jack shit. Thanks for proving my point.

I like paper as well. That is one of the reasons I don't want to send my
paper QSL cards off. They do not exclude each other.   In fact paper
QSL can also be trustedQSL with a bar code signature.

> #2) Most major DXpeditions derive much of their funding from donations
> received in the QSL process. They are unlikely to participate in scheme

There may be a funding source from e-QSLs. Then again they maybe
paper only for DXpeditions and even if not paper only I think
people will still donate.

> #3) Perhaps less than 50% of the DXCC 'entities' have the required telecom
> infrastructure to support routine participation by the average resident.

Hmmm? This is where a system like LOTW and eQSL.cc breaks down. It
requires a connection. Trusted QSLs do not, it only requires a computer.
We could even set up e-buros which would collect Trusted Eqsl and send
them via snail mail to an upload point. That would still be faster and cheaper
than standard paper buros. Thanks for the idea!

Or how about this packet networks to send Trusted QSL? Is this legal?
It would be signing the plain text data, so there would be no information hiding.

> #4) ARRL is well down the path of deploying LOTW which will become the DXCC
> "eLog", and thus the 'solution of choice' among serious DX players. Any
> other scheme is second-tier right out of the box.

In the ARRL report the HQ staff was only task with doing it in Jan 01. They
are still review options. I hope one of those options will be a PK Trusted
QSL system. The problem with having a hugh database is that the
person sending and validating the QSL has to be connected. Trusted
QSL that isn't the case. They can be validate at anytime.   Of course

what will happen is LOTW will start off as a free service then they
will charge $5.00 then $10.00, $15.00, etc. But now you are locked in
and they have you right where they want you. With a Trusted Open
Source/Standard system no one group will have total control. Which
is the way I like it.

I had thought of an idea to have instantQSL, where the sending would
give you a 6 or 7 character signature, but it turns out it would be
to easy to fake, but it was a great idea while it lasted!

Happy DXings and 73

> It's called "probative evidence".

Thanks, Phil. I didn't know that term or the history before.

I wonder how many complaints of "I reported it to the FCC but they never did a thing" can be traced to lack of evidence.

> Good grief! It this myth ever going to go away?

Which myth?
>
> 1. There is no expert ham.

Sure there are - lots of them, on many different subjects. Usually they don't go around claiming to be experts, though.

I think what you're saying is that the tests don't make one an expert, and never have. That I can agree with.

>By definition, this is a hobby radio service for amateurs.

Nope. Nowhere in the definition (Part 97) does the word "hobby" appear. What
makes ham radio "amateur" is the prohibition against "pecuniary interest".
>
> 2. The license exam is an entrance exam, not a final exam.

I agree 100%. The exams are by no means comprehensive - and never were.

>It is after
>you get the license that one begins to really learn about radio.

I'm surprised that nobody has challenged this with the "friend who has a Ph.D
in EE" claims!

>The
>license exam is designed ONLY to introduce the basics.

Actually, there's a bit more to it. See below.
>
> 3. The license is a permit to learn about radio, not a graduation diploma
>granted because one passes the license exams.

It's a permit to USE radio. That's important - our licenses are for operating.
Learning is one of the goals, of course.
>
> 4. The various license classes were not designed to endorse skill or
>knowledge. Instead, the license class only shows that the person has
>demonstrated to the FCC that he/she has learned the basic skills necessary
>to operate properly and safely in the frequencies used by that license
>class.

Close, but again there's more to it. The license classes were meant to
incentivize learning - give hams a reward for learning more.
>
> 5. License class is not a gauge of knowledge or skill. A Novice could be
>very knowledgable when it comes to communications technology and electronics
>(complete with an engineering degree to back it up), and the Expert, by
>license class, could be a total idiot when it comes to both of these.

Then you are saying that the tests do not measure radio knowledge at all.
>
> 6. All of the above was as true twenty years ago as it is today.

I disagree. 20 years ago the tests were not the same, and neither was the
license structure nor the exam procedures.

> In fact,
>the recent changes in the license exam structure only emphasizes these
>truths even more.

To an extent, yes.
>

> 7. Recent changes in radio emphasis has reduced the desire for license
>upgrades.

I think it has more to do with saving the FCC a pile of administrative work.

> For example, those only interested in VHF/UHF technology (because
>of employment or whatever), will see little gain from the license classes
>above Technician.

Agree 100%. The Tech was created for just this purpose 50 years ago.

>This further reduces the claim that higher license
>classes yields higher knowledge (different knowledge, yes, but not higher
>knowledge).
>
> Lets put this "expert" ham through license exam, and license class, myth
>to rest, people. It has never been true, and it is even less true today.

Ever see the study guide for the Extra of 1963? I have - it required a bit of knowledge to pass.

--

Testing actually serves several purposes to the FCC.

The first, as you have correctly noted, is to determine that the licensee knows the basics. How well the tests do this is another question, of course.

The second purpose is to address problems in the ARS. For example, in the old days (>30 years ago), the exams were full of questions about the band edges, frequency measurement, accuracy of various methods of determining frequency, how to order a crystal, etc. The reason for this focus was that there had been problems with hams straying outside the bands, usually because of ignorance of the limits of the technology they used. Today you see less emphasis on such things because they are not much of a problem anymore, and more emphasis on other areas which are perceived problems.

The third purpose is to promote learning by rewarding it with more privileges. ("Incentives")

The fourth purpose is to promote certain technologies by introducing them to hams. That's why the questions on things like spread spectrum and EME, whcih are used by a tiny minority of hams but which are a significant part of the written tests.

There are other purposes, too, but those are the ones I can think of right now.

It is important to note that before 1953 there was an "incentive system" by which hams got more phone privileges by passing a more advanced written exam. This system was reduced in scope in 1953, when the FCC gave Generals and above all amateur privileges. But by 1958 the FCC was talking about reviving this system because they were unhappy about the perceived lack of technical knowledge of many hams of that time. It took ten years of proposals and

counter-proposals before the changes known as "incentive licensing" were
instituted.

No doubt about that. The issue with the steel quality only came about once the wreck was located a few years ago, and some samples were retrieved for analysis.

> It did not have a single cause. The list of things that
> could have prevented the disaster is a long one.

Now everyone can have fun debating which "cause" was the most significant single one, other than not hitting the iceberg, which could have prevent the ship from going down. This sure beats debating the CW testing, and exam issues, at least for a while. 8-)) Take care.

I guess you don't live close to a large Amish community, do you? Such items are still very much in use there.

But since you want examples that are a little more up to date, I might also point out that there is nothing on a driver's license test that requires you to know how to drive a standard shift vehicle in order to obtain a standard driver's license. This is a matter of choice.

All that matters to you and certain others in this newsgroup, is that you'd rather argue semantics over the usage of the word "forced" in a sentence, than the reasons why high-speed code testing should have been retained for access to HF phone portions.

  In all fairness to the complainants, a lot had to be put on the
  back burner over the years because "lack of manpower" was real
  (one of the negative supports which led to many of us retiring).

  If the "hot topic of the month" was cable leakage, 2-m carrier
  throwing took a back seat.  When the "throwing" progressed to
  cross-banding into the Public Safety channels, the priority was
  put into the foreground.  I was one of several "pendulum
  disturbers" who wanted my investigators to work ham radio cases
  despite regional and headquarters policy, and I took my lumps
  because of that in the early 90s.

Seems like six of one, half a dozen of the other to me.

Probably not. Not doubt they are more firm about requiring a motorcycle
test if you want a motorcycle license however.

I think we can safely assume that YOU do NOT operate on 6 meters. Guess where
the first harmonic of some high powered CB transmissions fall? Do your homework
before posting...please.

P.S. The guy your referring to holds a FCC GROL, is an avionics tech, and a
licensed amateur. So much for your "assumptions." 73.

"Freebanding" is a colloquialism. It is actually unauthorized, 2-way transmissions on frequencies that are reserved for other radio services. These transmissions usually take place above the upper portion of the U.S. citizens band, and often in the 10 meter amateur band.

Circumstances forced you to MAKE A CHOICE whether or not you wanted to learn Morse code in order to meet the reqiurements of a HF ham radio license. That's the only force involved.

Delude yourself all you choose, Dave. You have been exposed as being ignorant of the definition of a word in the English dictionary. There's no way for you to recover.

The two definitions overlap but the second one is a tad closer to
the concept I wanted to convey. Does your self proclaimed omniscience
limit me to only one definition?

Dave Heil wrote:
> No one forces you to operate a motorcycle.

I didn't say anyone forces me to operate a motorcycle so your statement is an irrelevant strawman.

> No one forces you to to take an exam for a motorcycle endorsement. No
> one forced you to take a morse exam.

You have missed the point entirely, Dave. Texas motorcycle riders are forced (required by circumstances) to pass a motorcycle test. HF hams are forced (required by circumstances) to pass a Morse code exam. Non-motorcycle riders are not forced to pass a motorcycle test. Non-HF hams are not forced to pass a Morse code exam. How can you possibly not comprehend such a simple concept.

Which brings us back to the question. Why is Morse code skill required of
people who don't use it while manual transmission skill is not required of
people who don't use it?

So we are back to the original question. Why cannot Morse code be handled like manual transmissions are handled?

Easy, oh clueless one. Something that is required by circumstances
normally is produced with some effort.

> Did you have the
> lighter book under the one which is too large (formerly heavy) to open?

It is because I have arthritis and the big dictionary is painful to
pick up. The two definitions are essentially the same.

> There was no diversion. You simply switched definitions after choosing
> the wrong one. Then you added the *if* portion. You can't debate
> without injecting new information, used selectively.

You are forcing me to inject new information, Dave, in an effort to overcome
your ignorance. You cannot have your cake and eat it too. You cannot criticize
me both for your requirement that I expand my explaination because of your
ignorance and rag on me at the same time for that very explaination.

But I did it for you, Dave, because of your ignorance. Why do you object
to a second definition from a Webster's dictionary that helps to alleviate
your ignorance?

> You were not forced to learn morse code. I was not forced to learn
> morse code.

We are HF hams, Dave. Therefore, we were forced (required by circumstances)
to learn Morse code. Non-HF hams are not forced to learn Morse code. HF
hams are.

You don't think the FCC has the power to compel HF hams to learn Morse?

News for you, "Phillie," the MARS acronym has meant
Military Affiliate Radio System for 38 years...since 1962
or thereabouts. Please see the history of MARS as given
on the USAF MARS home page given following.

If you wish to use cutesy nicknames for others, then you
will be subject to the same regardless of Ed Hare's
wishes...

>>Licensed radio amateurs can assist MARS in such public service
>>roles. 5000 do so. However, MARS is essentially a secondary

>
> IIRC one must be a licensed amateur to get authorization to
> operate one's station with a MARS callsign in MARS activities.

The following is a reproduction of the USAF MARS home page, converted from HTML to conventional ASCII text as near as possible to the original format -

===

United States Air Force Military Affiliate Radio System (MARS)

The Air Force MARS office is located at the Headquarters, Air Force Communications Agency (AFCA), Scott AFB, Illinois. This office is a headquarters staff function, serving as the primary point of contact, systems manager, and focal point for all matters pertaining to Air Force MARS activities, functions and management initiatives in support of DOD objectives. Governing directives for Air Force MARS: Air Force Instruction (AFI) 33-106, Managing High Frequency Radios, Land mobile Radios, Cellular Telephones, and the Military Affiliate Radio System; Department of Defense Directive (DoDD) 4650.2, Military Affiliate Radio System. The Chief of MARS is responsible for the dissemination of policies, procedures and directives concerning administration, operations, training, frequency management, equipment and logistical matters for the worldwide USAF MARS program. Represents HQ AF, HQ AFCA, Air Force MAJCOMs, and FOAs interests at meetings and conferences at the Joint Services MARS Panel, Office of the Assistant Secretary of Defense for command, control, communications and intelligence (OASD/C3I), National Communications System (NCS - SHARES), Federal Emergency Management Agency (FEMA), and other federal, national and state entities. Administers to an affiliate volunteer population of approximately 3,000 members and 300 contingency military stations consisting of active, reserve and Air National Guard unit MARS stations. Establishes and maintains procedures to manage, control and account for surplus government property used to support the affiliate portion of the Air Force MARS program. Coordinates closely with the AF Frequency Management Agency. Maintains an active liaison with the Army and Navy-Marine Corps MARS Chiefs. Promotes Air Force and public interest in MARS and amateur radio. Attends and participates in national and regional conventions of amateur radio groups; attends regional MARS conferences. The point of contact for all USAF MARS matters is:

Hq AFCA/GCGS (MARS)

203 West Losey Street, Room 3065
Scott AFB IL 62225-5234
Phones: (DSN) 576-5552; Comml (618) 256 5552

What is MARS?

The Military Affiliate Radio System is a Department of Defense sponsored program, established as separate managed and operated programs by the Army, Navy, and Air Force. The program consists of licensed amateur radio operators who are interested in military communications. They contribute to the MARS mission providing auxiliary or emergency communications on a local, national, and international basis as an adjunct to normal communications.

MARS History?

In November 1925, the Army Amateur Radio System (AARS) was formed by a few dedicated pioneers in the United States Army Signal Corps. This organization continued until the start of World War II when operations were suspended. Army amateur radio was authorized to resume operations in 1946 and the Army Amateur Radio System was reactivated and functioned as such until 1948 when the Army and Air Force established the Military Amateur Radio System, later renamed the Military Affiliate Radio System (MARS). In 1962, the Navy-Marine Corps MARS program was launched making MARS a joint service program.

MARS Mission

Provide Department of Defense sponsored emergency communications on a local, national, and international basis as an adjunct to normal communications.

Provide auxiliary communications for military, civil, and/or disaster officials during periods of emergency.

Assist in effecting normal communications under emergency conditions.

Create interest, and furnish a means of training members in military communications procedures.

Provide a potential reserve of trained radio communications personnel.

Handle moral and quasi-official record and voice communications traffic for Armed Forces and authorized U.S. Government civilian personnel stationed throughout the world.

Conduct an appropriate Amateur Radio program as a part of the annual celebration of Armed Forces Day.

Eligibility to Join MARS

The applicant must:
Be 18 years of age or older.
Be a United States citizen or resident alien.

Possess a valid amateur radio license issues by the Federal Communications Commission.
Have digital capability, i.e., Packet, Amtor, Pactor, or G-TOR.
Possess a station capable of operating on MARS HF frequencies.

MARS members must agree to operate in accordance with the rules and regulations governing MARS as follow:
A Minimum of 12 hours participation per calendar quarter with 6 hours in their primary HF assignment.

Benefits of MARS Membership

Add to the enjoyment of your, amateur radio hobby through the expanded horizon of MARS.
Become part of the Air Force MARS worldwide communications system.
Increase your communications skills and capabilities. Selected correspondence courses in communications-electronics subjects are available free to MARS members from their respective affiliated serve after completion of six months active membership.
Operate on specially assigned military radio frequencies in voice, teletype, PACKET and other digital modes of communications.
Join a group of dedicated fellow radio amateurs participating in meaningful public service.
Gain a feeling of being associated with a military mission and contributing to the welfare and preparedness of the nation.
Participate in regulated, disciplined radio nets with structured lines of organization and very specific operating rules.
Participate in the MARS Excess/Surplus Equipment Program after 6 months active membership. Issue of equipment is based on availability of equipment, and possible assigned mission of individual activity. The granting of MARS membership to an individual or activity does not in itself convey an automatic right or entitlement of the recipient to receive or demand MARS property.

Typical MARS Frequencies

MARS members stations meet periodically in scheduled networks on military frequencies outside of the amateur bands. There are various types of networks and each accomplishes a specific goal. For example, administrative networks to take care of much of the day-to-day management of the program; traffic networks which exist solely to pass third party traffic; and of course, emergency networks which are established to provide for communication needs during periods of emergency. There are also technical nets and training nets. MARS nets operate in different modes. Although high frequency (HF) single sideband (SSB) voice is predominant, there are RTTY, VHF, PACKET, other digital modes and even slow scan TV nets. You may not join or belong to more than one MARS service at the same time.

How to Join MARS

To join, send a request for application forms to:
E-mail: USAF.MARS@scott.af.mil
or,
(Conventional mail)
Chief Air Force MARS
HQ AFCA/GCGS (MARS)
203 W Losey St, Room 3065
Scott AFB, IL 62225-5222
May 2000

Return to top

===

I would requrest that any comments, critiques, or name-calling of any kind concerning USAF MARS to be directed to Chief, Air Force MARS, at Scott AFB rather than myself.

In "my day" in radio, being the 1950s, 1960s, 1970s, 1980s and 1990s, inclusive, I had little contact with MARS activities. I can only comment on what the MARS chiefs of the respective military branches have stated publicly. Any "behind the scenes" or hidden descriptions of "insider" experiences or definitions are inadmissible as inaccurate and irrelevant hearsay.

Dave Heil wrote:
> And you are stating that there is no way that the "then" portion is
> false. I strongly disagree.

Take the logic statement If A then B. If A is false then the entire
statement is true. If A is true and B is true then the entire statement
is true. If A is true and B is false then the entire statement is false.

If a ham is to obtain HF privileges, he is forced (required by circumstances)
to pass a Morse code exam.

If a ham doesn't have HF privileges, the statement is true.

If a ham has HF privileges and has passed a Morse code exam, the
statement is true.

If a ham has HF privileges and hasn't passed a Morse code exam, the
statement is false because that outcome is impossible (outside of fraud).

So yes, it is impossible for the 'then' portion to be false because,
neglecting fraud, it is impossible for an HF ham not to have passed
a Morse code exam.

The logic is completely valid and consistent.

> Your statement does not become true because you insist that it is.
> No one is required to learn morse or to take an FCC exam. Both are
> entirely optional.

```
You continue to be confused. HF hams are required to learn Morse. Hams
are required to take an FCC exam. Neither is optional for hams. Please
show me a ham who has not passed an FCC exam. Please show me an HF ham
who has not passed a Morse code exam.

Is that the point?  All along I thought the requirements were
established by the licensing authority.

As far as US amateur radio is concerned, an amateur license
is granted by the FCC, not the desires of the already-licensed.

All of the "license" arguments well away from the fact do
nothing for the conversation except to misdirect it.

To get a dog license in Los Angeles, one does not have to
be a dog or live like one. One may be in a dog's abode by
doing nasty after a marriage agreement, however... :-)

>problem.

Heil goes after misdirection a great deal. Irrelevancies are cited
well off the mark due to an inability to rationalize His having to
take a 20 WPM morse test (do we know if he got a waiver?).

So far, the PCTAs have misdirected by citing: (1) Pilot licenses
(not applicable); (2) marriage licenses (not applicable, no test);
(3) rodeo cowboys supposedly licensed by FCC (none, not
applicable, implied by Heil). Those that do not use rationales
for continuation of "hazing rituals" will bring out misdirection by
trying for English mis-use.   :-)

Heil seems to insist that all do as He did or be thought
"inferior." He has already said He is "superior." He has further
stated that only His, and His alone, definitions (of anything)
shall be considered suitable, correct, and relevant for any sort
of discussion. That should end any discussion.

Any number of word combinations logically equate to the 'if' function of an if/then statement. The 'if' function is often implied in the syntax. The following statement:

An HF ham is forced (required by circumstances) to pass a Morse code exam.

has the 'if' function implied. This is what Dave is missing or ignoring. An HF ham has HF privileges. How did he get them? He passed a Morse code exam. He cannot have HF privileges without passing a Morse code exam. Therefore, if a ham has HF privileges he was forced (required by circumstances) to pass a Morse code exam. There is no other way the FCC will legally allow a ham on HF. The Morse code requirement is required by the circumstances which exist at the FCC. That's the definition of "forced".

Dave Heil wrote:
> Neat logic lesson, Cecil. The following statement is also true:
> "No person is forced to obtain an HF ham ticket".

Of course it's true, Dave. But since nobody has asserted that anyone
is forced to obtain an HF ham ticket, it is also irrelevant and can
simply be considered as your strawman diversionary tactic. You continue
to miss the point. HF hams are forced (required by circumstances) to pass
a Morse code exam. The Morse code requirement is certainly required by the
circumstances which exist at the FCC. That, my friend, is the definition
of "forced", straight from Webster's.

But that's not my argument, Dick, that is Jim's statement. Of course,
since you cannot refute my argument, you choose to divert attention
away from my argument to Jim's statement.

I have been very careful with my syntax. I have used passive voice.
HF hams are forced (required by circumstances) to pass a Morse code
exam. Non-HF hams are not forced to pass a Morse code exam. The
Morse code requirement is "required" by the "circumstances" existing
at the FCC. That's the definition of "forced". Would Jim have forced
himself to learn Morse code if he had not been forced (required by
circumstances)?

Dave Heil wrote:
> Sure, both are valid but their meaning is not the same.

Their meanings certainly overlap and their meanings are the same in the overlap area. "Produced with effort" and "required by circumstances" can certainly mean that the effort required was required by the circumstances. Can you think of a case where the effort required was not required by the circumstances.

> ...and you mean that the use of the "if" word implies options to do or
> not do something.

The 'if' word implies conditions. Those same conditions are often implied without the existence of an 'if' word. That is what you are missing or ignoring. What is implied by "HF ham"? The implication is clear. An HF ham was forced (required by circumstances) to pass a Morse code exam. Non-HF hams are not forced to pass a Morse code exam. You have painted yourself into a logical corner and are arguing an impossibility. Neglecting fraud, it is not possible for an HF ham to exist without passing a Morse code exam.

> > If a ham is to obtain HF privileges then he is forced (required by
> > circumstances) to learn Morse code.
>
> Sorry, Cecil. I don't buy the "then" portion of your statement.

You don't buy that the Morse code requirement is required by the circumstances existing at the FCC????? Not to buy that, Dave, is not to buy reality. Please produce an HF ham who was not forced (required by circumstances) to pass a Morse code exam.

I agree with the Texas location. These folks were heard in North Carolina, at a time when Texas beacons were also coming in.

One gave a mile marker of 869. It takes a big state to have that many miles on a given highway!

Is there a central place where data is funneled, prior to sending it to FCC?

What is the specific codification of US Law in regards to "violation
of international treaties?" Or agreements? Or memberships for
some international purpose? How is membership by the USA
administration in the ITU regarded as "law?"

Those questions are asked for the purpose of clarification since
they are not easily seen by ordinary layperson citizens of the US.

Not having violated any FCC regulation, I have never seen any
such FCC Notice of Violation. How is that Notice of Violation
applicable to "international law?" As far as I am concerned as a
US citizen within the borders of the USA, I am bound only to US
law.

> As you know, US Government stations and foreign radio stations
> are not subject to FCC Rules, and when one is found in apparent
> violation of standards derived from the International Radio

> foreign government Adminstration, as appropriate.

I do NOT "know the above." How is that applicable to international
standards agreed upon by a UN body? If there is violation of an
"international law" then why is an FCC form used? What is the
importance of an FCC form number?

> If the FCC receives an equivalent notice from a foreign
> Administration that an FCC-regulated station was found in
> violation of the Radio Regs, the FCC turns around and issues

> a Form 793 to the licensee citing the section of the Radio
> Regs as reported by the foreign Administration.

What are you trying to say there? Is the USA's FCC some
kind of supra-national radio enforcement agency? Or is that
Form simply issued by a US agency citing a US citizen?
If that is the case, why is this so applicable to "international
law?"

> When a specific Administration files a complaint with the ITU
> that another Administration is intentionally disregarding or
> violating some provisions of the International Telecommunications
> Convention, the Radio Regulations, the Telegraph and Telephone
> Regulations, a specific Agreement, or a ruling of the IFRB,
> where an exception was not taken at the time of the signing of
> the treaty or Agreement in question, the matter is referred to
> mandatory arbitration under the auspices of the ITU Secretary-General,
> per all such agreements.

How is some "international law" enforced in that regard? Do
specific Radio Forces from complaining countries invade the
radiospace of the "offending" country? :-)

Let's cut to the chase there. What I am saying is that
international agreements or treaties are only "enforceable" as
the member nations want to make them, enforced by
administrations of specific countries internally. As such they
are handled "in-country" by a country's regulating agency.

It's fairly obvious that treaties and agreements should be
handled in Good Faith by all nations involved in such treaties
or agreements. There is NO supra-national agency that can
enforce any treaty or agreement violations. The closest the
earth has to such a body is the United Nations which can,
and has, made resolutions "allowing" the use of force against
certain countries who have violated any treaty or agreement.
That force is enacted by member nations, not by the UN
itself. The UN has no specific "international law" enforcement
body, only various administrations who agree to enact force
after a resolution passed by the UN.

> That was the route we had to take when Radio Omdurman (Sudan)

> latter's ITU liaison engineer at the Israeli Ministry of
> Communications (equivalent of the FCC) in the mid-60s. It took
> about 2 years but Omdurman was eventually brought into compliance
> by order of the ITU Secretary-General.

That's all very interesting, but how does a Sudan-Israel conflict
over MF broadcasting involve US amateur radio?

Lastly, how is it that one "highest" rated US radio amateur can berate other US radio amateurs for "not doing enough" on natural disaster aid when there is ample evidence of the USA having already suffered natural disasters in the near past?

> The Radio Regs are, in fact, enforceable treaty.

As far as I am concerned, US law and regulations apply to US citizens. Since when do US citizens "sign treaties" to "agree" to US law and regulations? Or are they "signing international treaties" or something just to be subject to US law within US borders? If the US administration wants to set US law and regulations according to some international resolutions and standards, fine with me. I've supported that in the past and see no problem with that. However, if you want me to abide by some "international law" within the boundaries of the USA, then I have to ask some deep specifics and do a lot of questioning, some of it possibly taken negatively by those whose agendas involve newsgroup message points.

Nope, the fact remains - HF hams are forced (required by circumstances)
to pass a Morse code exam. Non-HF hams are not forced to pass a Morse
code exam. The Morse code requirement is required by the circumstances
existing at the FCC. That's the Webster's definition of "forced".

I know of no state that requires knowledge of either in order to obtain a
driver's license. Too many people are going off on a tangent and making
comparisons that are totally without thought or reason.

IOW, regardless of the relevancy of the requirement, as long as they show
that they can beep, they can do whatever they want afterwords.

That's always been the subject. You're comparisons and miscomprehensions are
not my fault. I've pointed them out, but you seem more obsessed with arguing
about what the definition of "is" (read: "forced") is.

A person I met through a co-worker bragged about using a ham radio and ham frequencies to talk to other drivers from the same company on the road (it seems one of the drivers at the company started it, bragged about it, and other drivers followed). He even showed me the radio in his truck (one of those "imported" CB rigs). Neither of them (the co-worker or this driver) knew about my ham radio involvement.

The following Monday, I contacted a manager at the company, explained that this person was violating FCC rules, and suggested that I might file a complaint with the FCC. I followed up with a letter, complete with quotes from FCC regs.

About two weeks later, I asked the co-worker about the driver and was told that he had been fired. As I understand it, the company put out a notice to remove all illegal radio equipment from their trucks and later inspected the trucks to see if employees complied. When a radio was still found in the driver's truck after the notice, he was fired.

The purpose of this is to point out that the company itself, not the FCC, may be the best place to start if you discover a driver operating without a license in the ham bands. Many companies probably would not want this type of trouble, so may take more immediate action. Remember, even the independant drivers work for companies (the names on the trailers), so this may even work for them also.

I posted this nearly two weeks ago (give or take) and you're just now
responding to it?
```

While "Good Will Hunting" may be a work of fiction, the names of people that I posted along this thread are not fictional characters. They were all successful, and none held a college degree. It's interesting how you ignored that part of the discussion.

>>What part of this is so hard for you to understand?

>Only those documents of the ITU which are not in English.

Jerry, Lennie is a dyed-in-the-wool Clintonian democrat. Promises, treaties and vows are for "the other guy". That we Americans profess a love of laws and judicial process is just an annoyance to creeps like him.

>Part 97, Title 47 CFR, does not specifically state that amateur
>radio is a public service to the nation...it is a radio activity engaged
>in by individuals for non-pecuniary interests. The word "service" as
>in "radio service" used throughout Title 47 is a regulatory term
>denoting type and kind of radio regulated.

Lennie completely ignores the the REALITIES of Amatuer Radio. If it weren't for the service we DO provide, we'd have NOTHING to take to the table when defending OUR allocations.

Of course, Lennie has NO license, ergo nothing to lose.

More Andersonian hate, tripe and rhetoric.

Nothing we didn't expect.

>What is the specific codification of US Law in regards to "violation
>of international treaties?" Or agreements? Or memberships for
>some international purpose? How is membership by the USA
>administration in the ITU regarded as "law?"

Geez, Lennie...something you DON'T know...?!?!

Don't like it when someone holds YOUR heels to the flame, huh...?!?!

>As far as I am concerned as a
>US citizen within the borders of the USA, I am bound only to US law.

And as the Gentleman told you, Your Geezerness, Treaties ratified by the United States ARE "law" in the United States!

In what shade of black and white do you need that?

> If there is violation of an
>"international law" then why is an FCC form used? What is the
>importance of an FCC form number?

Run, Lennie..RUN!

>Let's cut to the chase there. What I am saying is that
>international agreements or treaties are only "enforceable" as
>the member nations want to make them, enforced by
>administrations of specific countries internally. As such they
>are handled "in-country" by a country's regulating agency.

OK, here's the Brass Ring. The State Department has told the FCC that it has ratified ITU treaties. The FCC will therefore enforce those provisions. Need it any simpler, Lennie?

>It's fairly obvious that treaties and agreements should be
>handled in Good Faith by all nations involved in such treaties
>or agreements. There is NO supra-national agency that can
>enforce any treaty or agreement violations.

Saddam Hussein tried the "Maybe I Will...Maybe I Won't" policy. It didn't work for him, either.

And there IS an agency..It's called the World Court in The Hague, The Netherlands.

>The UN has no specific "international law" enforcement
>body, only various administrations who agree to enact force
>after a resolution passed by the UN.

Sorry. Wrong.

>Lastly, how is it that one "highest" rated US radio amateur can
>berate other US radio amateurs for "not doing enough" on
>natural disaster aid when there is ample evidence of the USA
>having already suffered natural disasters in the near past?

US Amateurs are licensed, not rated. However I have a Private Pilot's license with a Single Engine Land "rating" on that.

>As far as I am concerned, US law and regulations apply to US
>citizens. Since when do US citizens "sign treaties" to "agree"
>to US law and regulations?

Since they elect officials to act on thier behalf in such matters.

>....then I have to ask some deep specifics and do a lot of questioning, >some
of it possibly taken negatively by those whose agendas involve
>newsgroup message points.

No, you just can't stand having your know-it-all attitude hung out to dry by someone who is obviously far better suited to comment on it than you, Lennie.

I think Phil's credentials are impeccable. Unless you care to call them into question?

     Had you been a licensed Amateur Radio operator instead of the hateful,
lying antagonist that you ahve become, you MIGHT have had some better insight
as to the true working relationships, rather than a cut-and-paste from a
website.

     Of course, this kind of thing allows you to wallow in your mediocrity,
able to dispaly only your ability to surf the net for ANY piece that can
"prove" your newsgroup message point tally.

Repeated for futher comment:

>Any "behind the scenes" or hidden descriptions of
>"insider" experiences or definitions are inadmissible as
>inaccurate and irrelevant hearsay.

    Lennie-to-English:  "I don't want to hear the truth".

     Of COURSE you don't want to hear it, Lennie.  Nothing like the
testimonials of LICENSED Hams who have "been there, done that" to ruin (again)
your rants.

     Putz.

My February 1953 QST page 50 has an article about the
"Military Affiliate Radio System" so apparently the name dates at
least that far back...

I see that I was wrong about the actual usage of the term 'overtone', and that the third overtone is the third harmonic of the fundamental, or the fundamental times three. Still, 'first overtone' doesn't sound right to me, because there's nothing 'over' about it, and the word 'fundamental' already means that.

Perhaps you can trot out several additional definitions in an attempt to
make your case. Certainly the first one wasn't applicable at all.
Since I've already stated that I claim no omniscience, why do you
persist in using that term. Are you omniscient in your ability to
choose the correct definition from a list of several? Apparently not.

...because force is not involved. Taking a motorcycle exam is not compulsory. Taking an amateur exam is not compulsory. Why can't you understand this? It must be the Libertarian leaning toward anarchy--the view that anything which is regulated is "forced".

Has it dawned on you that you are probably not going to succeed in swaying me toward your view on this?

Really. I suppose you'd then have to define the quantity of effort.
If I'm *forced* to pick up the TV Guide, I'm not really putting forth
effort.

> > Did you have the

I had no idea that health problems would enter the discussion. I
wouldn't want to cause you pain. The definitions are assuredly not the
same.

I'm not *forcing* you to do anything, Cecil. You're doing it because
you can't stand to be bested in an argument. It is your free will which
causes your continued responses. It is not compulsory to reply.
It would be refreshing for you to not to take us down the path of
substitution, weaving and whirling, in attempting to make your point.

That's kind of you. You're obviously a superior being. I'll be
eternally grateful that you saw fit to assist me in my struggle for
understanding. I'm really having trouble understanding why that first
definition was abandoned in favor of this new one. I also have trouble
understanding why you've totally ignored the definition which I provided
you. Did you have trouble understanding it?

I don't think the FCC has the power to force me to become a ham at all.

I haven't gotten that far yet.

Of course some people are successful without degrees. And others with degrees are not successful. No degree or other qualification is a guarantee of success.

But if you or a loved one needed to have an operation, would you want a surgeon who had been trained in a good medical school and who had a medical degree, or one who was self-taught from books in the library?

Plus the VE fee and a trip to a testing session.

The FCC WANTS cbers and "freebanders" to get ham licenses and go legal. That's why the test requirements have been changed over the years. It's much easier to enforce the regs on licensed operators than on unlicensed ones.

If a ham is to obtain HF privileges, he is forced (required by circumstances)to pass a Morse code exam.

So if the B portion relating to being forced to pass a morse exam is false, the entire statement is false. So "he is forced (compulsory) to pass a morse exam." can be a false statement. That makes the entire statement false. Apparently the whole thing hinges on that definition of the word forced.

How about this one: If obtaining an HF amateur radio license is not mandatory then no person is forced (compulsory) to pass a morse exam.

Does that meet your logical requirements? It sounds pretty good to me.

> The logic is completely valid and consistent.

See my logical response above.

> who has not passed a Morse code exam.

The false part is that no one is required to obtain an HF ham ticket. While a morse exam is part of becoming an HF ham, nobody is forced to obtain such license. I've never argued that there are HF hams who have not passed a morse exam, I've argued that morse exams are not forced. Please stick with the discussion at hand.

But, Cecil, if no one is required to obtain an amateur ticket, how can one be forced to learn morse code? It is certainly an integral part of the equation. Your definition (in this latest incarnation) only fits if someone is desirous of becoming an HF ham. Your earlier "produced by effort" definition did not fit at all and has since been abandoned by you. I'm happy that you've found one which suits you better. This said, one is not forced to learn morse code. There is an option of learning it or not learning it.

"I forced the door open" and "I was forced to surrender my money" do not use the same meaning of the word "forced". In the second, no effort is implied.

The word "if" implies options. The "if" tells us that the individual has choices open to him.

No, I do not accept "then he is forced to learn morse code". That is
what is being debated. You have not proven that anyone is forced to
learn morse code.

TL, you're sshowing yourself to be more and more lacking in your
ability to see what's there. There is a fair sized segment of
freebanders who now hold ham licenses but continue to do their nefarous
deeds outside the bands. If you don't acknowledge that don't assume we

will automatically presume you aren't familiar with it. Possibly very
familiar.

If you had been paying attention you would have seen a good amount of
evidence.
So far there has been no trial nor conviction.

Now this is novel. A ham who insists that radio operators should follow
the regulations, get licensed and operate legally are condemned as
"bigots". Not too susrprising, considering the source.

> >We have a nice community and we don't want to see the streets

You sound just like some radial zealots who insist that decrying the rampant illegality by members of some minority groups is 'bigotry'. Same lame claim.

I flew an airplane when I was 12. But I guess they weren't talking about
me. I was able to fly it.

Just glad I didn't have to land it. :-)

You're acting like he insulted your mother or something.  What's so bad
about saying that learning code requires a trivial effort?  I think that's a
good thing.  Though Cecil is now pretending he didn't say that.

Not on the 610 they don't. You know, as in the subject of this discussion?

Cecil:

I can't because there aren't any. That is not an issue with me. The issue at hand is whether or not anyone was actually "forced" to take a Morse code test in order to gain HF amateur radio privileges. I contend that they were not. You contend that they were. Prove to me that you're right -- you have NOT done that yet.

Now, Dick. You just ain't giving them the respect their neat hardware
deserves. Kind of like the kids with the Tommy shirts, the latest Air
Jordan shoes, the Nike hat on backwards and little wisps of what looks
like pubic hair on the chin. I'm cool man, why don't you think I'm cool.
See my Chevy Blazer -- cool man. It is all a status game and us nasty old
hams don't give them status for all that money they spent. Bigot, man,
bigot.

My own experience is that a lot of freebanders, almost universally the
sidebanders, make pretty good amateurs. Guess it depends on whether a
convict who does his time is entitled to a pardon -- or whether you are a
good Baptist and believe in deathbed conversions. :-)

If they "continue to do their defarous? deeds outside the (ham) bands" then nothing has changed. Why should what continues to happen "outside the (ham) bands" be of concern to or have an effect on hams? Seems to me, the real problem for hams is when those guys, for instance, use AM/SSB in the CW/digital portion of the 10m ham band. Then they are violating the conditions of their ham license and having an effect on hams.

Yes, that is true and the MAIN reason it does not exist.

I said a couple of postings ago that I was talking about U.S. hams.

:-) Yep, and the point is that "voluntarily" doesn't matter. U.S.
HF hams are required by circumstances to pass a Morse code exam.
Whether it is voluntary or involuntary is irrelevant. 100% of U.S.
HF hams who don't voluntarily take the Morse code exam are *required
by circumstances* to take it involuntarily.

Yep, that's true. All U.S. hams are required by circumstances to pass a written ham exam. U.S. hams who don't voluntarily take the exams are required by circumstances to take them involuntarily. Whether the exam is taken voluntarily or involuntarily is irrelevant to the FCC. Either way, it is required by circumstances.

It's very difficult to prove anything about netnews. It appears that
half the time, Dick's bratty 8-year old idiot nephew is doing the
posting to his internet account.

The government finds out if one is unable to fly a plane by giving
him/her a set of exams.

> So I wondering if you think the FCC should outlaw the use of CW by those
> who don't know how to use CW as exemplified by the many other examples
> in law?

Since it is not a life and death situation, I don't see any reason why
nocode techs shouldn't use the only CW-only frequencies in US amateur
radio for the purpose of learning Morse code.

Ok good. Glad to hear it. Back 3 years ago, you sure made it sound like
it was a bad thing. So the bad thing now is that some US amateur radio
operators don't think there is force involved?

Right. But the fact remains that the test requirements are based at
least in part, on the privileges afforded to radio amateurs. There is
no presupposition that everything must be covered in element 2.

So to be accurate, one might say that the government has rules against
doing things one is unlicensed to do?

I looked over how the FCC has changed the license requirements in the last 30
years. And taking a broad view of the problems the FCC faces in enforcing the
rules on unlicensed stations.
>
>Just what actions by the FCC support your conclusion?
>
Compare the requirements for a US ham license in 1971 and in 2001. Pay
particular attention to what was and is required for a license that allows lots
of HF/MF privileges on a variety of modes. Also look at the requirements for a
full-privileges license. I can post a detailed list, if you want.

Please understand, I'm not saying this was the ONLY reason for the changes -
just that it was one of them. And I'm not saying that these changes were all
bad, either. I'm just explaining my view of part of the FCC's motivation and
thinking on the subject, and how it has changed from the heyday of "incentive
licensing" to now.

Maybe. Or maybe you're just kidding about that.

How about posting a log of your last 5 QSOs on 40 CW?

> Never heard you there.

I'm there sometimes. Usually I'm down lower in the band, ragchewing around
7040, BA'ing around 7050 or chasing DX on the low end.

Besides, you probably wouldn't know it was me if you did hear me because of the
code speed used.

In general, I agree - just pass the tests and the license is yours. There are,
however, certain notable exceptions, where the prospective licensee has
demonstrated (in the opinion of the FCC) that he/she is not trustworthy of the
license.

> They simplified the structure because the old 6-tiered
>system was difficult to administer and a pain in the arse to enforce.

That's another reason to simplify the license structure (note that I didn't say
that
getting the "freebanders" and the non-commercial cbers to get ham licenses was
the ONLY reason, just that it was a big reason).

But the enforcement issue isn't part of it, I think. FCC enforcement of the ham
bands is mostly complaint-driven nowadays.

>The FCC's only interests in the ham bands are the efficient enforcement of existing regulations, modifying existing regulations to make enforcement easier and more efficient, and to farm out, sell, rent and other wise create revenue from under utilized portions of the spectrum that just happen to be allocated to the amateur service on a secondary (and sometimes primary) basis. The FCC is a governmental agency charged with regulating the use of the RF spectrum. They have no interest at all in the status of the Amateur Radio Service.

I agree with most of what you're saying - but add into that thought the following: There are an unknown number of "freebanders" and cbers who operate illegally on the air. Some of these operations are a source of interference and complaints to the FCC, who don't have nearly enough resources to adequately enforce the rules against such activity.

It's much easier to enforce the rules on a licensed station than an unlicensed one, if for no reason other than you know who the licensees are, and where they are. So making the ARS more attractive to "freebanders" and non-commercial cbers makes them easier to control. FCC cannot admit that maybe 27 MHz was not the best place to put cb 40+ years ago, and they certainly can't just shut down the service or move it. The "freebanders" don't even limit themselves to the 40 allocated channels, too.

By offering an alternative, the problem is partly solved.

>
>The ARRL, on the other hand, IS an advocancy (sp?) for the service, and they certainly DO have some interest in what happens to the hobby.

Agreed! Which is why some folks hate the ARRL so badly.

>I can assure you, as a member of the ARRL, that I do NOT look forward to seeing freebanders, pirates, nor anyone else with an "outlaw" attitude joining the hobby in ANY capacity. This is not official dogma from the ARRL, just the opinion of ONE member...

If they can leave their "addytood" (Philadelphia lingo) behind, they are welcome! But if not, they are big trouble for the ARS. But as you said, the FCC doesn't care all that much. Main thing is that it makes the FCC's life easier, because going after a ham with an addytood problem is easier than going after an unlicensed person with one.

In general, most of the new hams I know don't have addytood problems, regardless of their background. It's only a few who cause problems.

Sorry, I don't keep a log. On my scratch paper I have KB5WZI and KB1EVA
but I can't remember if I QSOed them or not.

> Besides, you probably wouldn't know it was me if you did hear me because of the
> code speed used.

I can copy call letters at 25wpm. It's just ten character words that
I have trouble with. By the time the seventh character rolls by, I've
forgotten the first three characters. Something to do with my short
term memory or lack thereof.

So then would force also be needed to stop people from doing what they
are unable to do? :-)

Hello Dwight

>Bert, are you really going to sit there and tell >me that the majority of CB'ers don't use >linears, modified radios, noise toys, "foul" >language, or

occasionally get into "cat fights" >with others on the radio?

No Dwight, I'm standing up and telling you.

>I doubt you could find more than a small >percentage of CB'ers who have not done at >least one, or more, of those things on a >relatively routine basis.

Dwight, I HAVE..."been there, done that," and I'm not talking about the illegal things either.(lest I arouse your fetish for zoning in on the illegal aspect) I HAVE operated on 11 meters since 1977...I believe that's one year less than you, but I'd bet the farm that I've "actually operated" there far far more than you have. I do monitor the "freeband" on a regular basis for the reason mentioned earlier...you find pretty darn good sideband operators there and they're pretty interesting to listen too. Don't hear much from you regarding the "Extra" lids on 75m.

>And, I'm sorry, there is no animosity towards >CB'ers.

Don't be sorry. I'll stand by my assertions. I've seen it, heard it, and have tasted it. When it's applied in a general manner "across the board," much like you do...it's no longer about the doing, it's just about who.

>Didn't anyone ever tell you that name
>calling is nothing more than the weapon of choice for the person who has no
>true defense of his position?

Uh, Dwight...that wasn't you that called that poor kid a troll just because he posted his reply at the end of the thread...hmmm???!!!

>Bigotry has to do with an extreme
>intolerance to another person's creed, >belief, or opinion.   Since crime, or >criminal behavor, is not a creed, belief, or >opinion, it is not bigotry to want to keep the >criminal element out of your community

You dropped your pants here, Pvt. Stewart...give me twenty! The fact that you apply your blanket of guilt to all CBer's and even mention "guilt by association" in one of your replies demonstrates your intolerance to the opinion of even legal CBer's. Geez, Dwight, because even the legal CBer's have operated in close proximity with the "criminals," they to should be treated with suspicion until they demonstrate that they are "good hams." Sounds like you're guilty until proven innocent. You blew that one.

Lastly, let me assure you that although the issues discussed herein are serious in nature...I do mean for our discussion never to get too serious or heavy as to offend one another. If the term RF bigot offended you, I do offer you my apology. That certainly was not my intent. Also, if it makes you feel any better...I think I know what a Tommy shirt is, but it'd be supposition at best. I think it's the shirt the lads are wearing that are 22 sizes too big...sue me, I saw this in a local mall, crazy.

73 de Bert

Oh, I've been paying attention, and about all I've seen is the reams of
BS from you. If you're not truly full of fecal stuff the world has yet
to see one who is. You've worked poor tired old Dr. Williamson so hard
he's surely way past ready for retirement. Don't you have at least ONE
other example??

What we've really been waiting for is the technical output from all
your hordes of techies. But Nothin' has been forthcoming whatever.

 And you are STILL spouting untruths. You are NOT required by circumstances to get a ham radio license, whatever the qualifications, even if there are no requirements to meet.

The
> federal government forces amateur radio operators to meet the
> requirements for an amateur radio operator's license.

 But you already said that no government requires you to get that license. So your ass-ertion is still wrong on its face.

 A little touchy are we TL? Wonder what might be behind all that
sensitivity to the merest suggestion that your activities might not be
assumed to be pure as the morning sun, given your attitudes that distill
out as in sympathetic leaning toward a certain cause.
 In any event, you'd best brush up on your tort law. Threatening to sue
someone for some imagined slight can get you more action than you
bargained for.

Enough! You want poetry, I got yer poetry right here...

(ahem)
>
A poem about something you may have experienced....

He laid her on the table
So white, so clean and bare.
His forehead wet with beads of sweat,
He rubbed her here and there.
He touched her neck and then her breast,
And then, drooling, felt her thigh.
The slit was wet and all was set, He gave a joyous cry.
The hole was wide...he looked inside,
All was dark and murky.
He rubbed his hands, stretched out his arms,

And then..........

he stuffed the turkey!

Exactly, Hans. In fact they probably outnumber all other ham licenses, in all other countries, combined.

But look at the numbers of JA ham stations since 1995. Not a pretty picture.

Some of what I post is not independently verifiable. But most of it is. Check
out my articles in QST and Electric Radio, my contest results in QST since
1968, my posts to other newsgroups. Set up a sked with me on-the-air or drop by
for a shack visit. Ask other hams who know me personally.

>The impression you gave originally implied bad things.

How? I simply reported the idea and the FCC's actions. Nowhere did I say it was a bad thing - in fact, I repeatedly stated that I wasn't passing judgement on this course of action.

The only possible bad thing I see is those who don't leave their bad habits behind.

>Your clarification indicates pretty good results.
>
I would think most hams would agree on them, too.

>
\>Not on the 610 they don't. You know, as in the subject of this discussion?

Are you now ordering all discussion to narrow in on a FORM?

Is the discussion to be about the appearance of the FORM, the typeface used, arrangement of words, fancy scrolling around the edges, artwork/engraving illustration, background color?

The FCC said openly that it welcomes comment from anyone. The FCC regulates US amateur radio. Ergo, the FCC chooses the various license forms. Comments on the FORM are just as welcome to the FCC as anything else...from anyone...

Problem is, you have suddenly become petty and narrowminded and wish to control discussion and topics. Talking about "papers" sounds like the beginning of a bad WW2 movie scene...

A "license" exists as a permission/grant to emit RF in a regulated manner. The license FORM is a certificate attesting to a permission/grant but the FORM itself is not the "license." A licensed amateur might have his/her 610 (or whatever number) destroyed and such will not affect their legality or permission or grant from the regulating agency.

This is true. In reality, all one has to say is, "I didn't write that. Someone must have hacked my account". I was merely speaking from the standpoint of having worked at a newspaper 20 years ago, when an article was published accusing a local high school football coach of recruiting violations. (The town takes it's HS football way too seriously) The article was based on one family's hearsay. This lead to an investigation, state play-off suspensions, firings, fines, and a lawsuit against the paper by the school district.

While the net is different, someone somewhere will eventually test the limits of this medium of free speech. It's just a matter of time.

Jim:

The dividing line seems pretty logical to me. The CDL general knowledge test covers topics which are specific to larger, heavier vehicles -- covering differences in handling, braking, and the nature of the payload (cargo, passengers). The endorsements require additional knowledge on special vehicle characteristics such as passenger-carrying, hazardous material, air brakes, etc. The dividing line seems well geared toward excluding the type of vehicles which would normally be operated by non-commercial entities such as automobiles, light truck/trailer combinations with a GVWR less than 26,000 lbs, and smaller cargo-carrying vehicles (such as the U-Haul/Ryder/Penske etc. rental moving vans).

I wish I could make that claim, but I can't! Let's just say I scored very high on them all, but I didn't "ace" them, unfortunately!

Where would we find "any test for a ham license that the FCC has used for the past 50 years"? I am pretty sure that most of the tests are unavailable and you know it. Who is buying the plane tickets for us to come give you the tests for verification of your claim? I'm betting you are pretty sure we won't, so no worries on that account. And even if you did pass, how would we know that it was "easily" passed? Maybe it was hard for you, but you wouldn't admit it. How could we tell for sure? No Jim, I'd say that you (and the rest of us, especially me...) are pretty safe from any verification when posting personal stories and claims, and we *all* know it...... :-)

Amateur radio users of 7.010 MHz are HF hams, are they not?  The point I
make is correct nevertheless.  Thank you for making the statement more
accurately than I.

Well, that's what matters after all. :-)

I'm going to take the tax refund to Vegas. Been winning roulette on the computer long enough. I'll be betting that I can avoid those 4 sigma events long enough to get out of town with some cash. If not, it'll be fun while it lasts. I showed the system to my dad (he's a blackjack player) and he was pretty impressed with how much he could win on the computer. I can't think of the name of the program now - it's one of those casino games you can buy. Looks just like the video games in Vegas.

73, Jim

No. I mean what's the big deal?  Dave isn't making your point.  You are.

> Please reference the "Forced code exams?"
> thread.

Set your follow-ups to "Forced code exams" if that's where you want the
follow-ups to go, or start a new thread.  It's your idea, not mine.

     Sure, when we can be verbally abused by self-professed "experts" in
commercial radio.

    He doesn't need Charles Atlas' course to like what I have in mind for him.

The point in making that statement is to illustrate that singling out
Morse code in this debate is silly. If it's true that hams are forced
to learn code, then by extension of the same logic they are likewise
forced to learn the rest of the material that fulfills the

requirements.

Be kinda silly for a federal agency to write a rule prohibiting someone
from doing something they were unable to do, doncha think? Their
purpose for creating the Tech license was to allow people to get on the
bands without having to learn, or operate, code.

Not at all. That's why they have rules prohibiting someone from
flying an airplane when they are unable to do so.

Well, that *was* your argument. I haven't argued that someone forces
himself to learn. You said you forced yourself to learn. I've argued
that *circumstances* require hams to learn (or already know).

Jim Kelley wrote:

> Amateur radio users of 7.010 MHz are HF hams, are they not?

Yes, but not all HF hams are allowed on 7.010 MHz. Only the HF hams
authorized to operate on 7.010 MHz were required by circumstances
to pass an Extra exam. One has to be accurate about such matters.

Cecil:

That's obviously the pot calling the kettle black.  You can't comprehend
the fact that no radio amateurs are "forced" to take Morse code (or any
other) exams.  They do so on a purely voluntary basis.  End of story.

>
>I never said anyone is forced to enter amateur radio so your
>statement is just another of your strawmen diversions.

Cecil:

It is only by attempting to enter the ARS that one becomes obliged to meet the licensing requirements. However, this entry itself is entirely voluntarily; and the decision to enter the ARS can be unilaterally rescinded by the prospective ham without any consequences which would affect his ability to lead a normal, happy, healthy life. Therefore, he is never "forced" (required by circumstances) to do anything he doesn't voluntarily agree to do.

>> Produce a person who was forced to learn morse.
>
>If I remember right, Larry was required by circumstances to learn
>Morse code. Please switch the discussion to the premise/conclusion thread.

I may have been "required by circumstances" to learn the Morse code, but being in those circumstances was entirely my own choice. Therefore, in spite of the fact that I was, admittedly, "required by circumstances" to learn the Morse code, I was not at all "forced." I think (methinks?) your Webster's Unabridged Dictionary may be defective...

They can very easily be replaced by intelligent, educated,
cultured, and dignified people willing to do the job as well or
better than it is being done now.  Anyway, as usual, it is
just a small minority of all truckers who give the rest of the
lot a poor image.  Those who don't fit the negative stereotype
should exert some influence to clean up the overall image
of truck drivers.

These days, truck driving is a complicated, demanding
business which requires more out of the individual than just
the ability to sit behind the wheel for extended periods of
time.  Here in Delaware, we've recently had a spate of
fatal accidents involving truck drivers who were obviously
operating outside the limits of ICC regulations and common
sense.  I blame it on the fact that the drivers involved were
not intelligent enough to recognize the importance of
operating within their limits, and exceeded them in the
interest of making themselves look good among their
peers and superiors, giving no thought to the consequences.
This is pure ignorance born of low intelligence.  Not all
truckers are like that, but unfortunately, enough are to
cause grave concern among the motoring public.

Cecil:

I've confessed to no such thing -- that's merely a figment of your
psychosis. Mr. Hollingsworth can examine my license credentials
to his satisfaction, at his convenience, and he will find nothing
wrong with them. And if he doubts my ability to pass a 20 WPM
Morse code exam, I'll gladly take one for him, any time -- as long
as he can create circumstances which require me to do so! If he
does, I'll take the exam voluntarily -- so I won't be being "forced!"

>
>Conclusion: Hams are forced to pass a ham exam.
>HF hams are forced to pass a Morse code exam.

Cecil:

Well, that may be comforting to you, but here's the monkey wrench in the works: I'm an "HF ham," and nobody "forced" me to do a damn thing! I met the licensing requirements purely as a volunteer! It was my choice, my decision, my effort involved. Nobody else influenced me, cajoled me, and certainly, nothing I would define as "force" was applied at any time. Therefore, I must logically conclude that the definition of force, i.e. "required by circumstances," is somehow defective.

I would think that the definition "required by circumstances" would better fit a word such as "inevitable." I would define "forced" as "motivated by coercive influence or threat of negative consequences."

I was *required by circumstances* to pass two Morse code exams, Larry.
The circumstances were the FCC requirements. All HF hams were *required
by circumstances* to pass a Morse code exam. Only nocode techs and
non-hams were not *required by circumstances* to pass a Morse code exam.
You, as an HF ham, were required by the FCC requirements to pass a Morse
code exam. Otherwise, you wouldn't be an HF ham.

> BTW -- is it pronounced "Seecil" or "Cessil?"

In Texas, it's pronounced "SEE'sul". In Japan, it's pronounced "SEE'saw".
The native Japanese don't handle 'L's very well.

Yes you did, Larry. Read it again. You confessed to being an HF ham
who used his free will to decide NOT to take a Morse code exam. Being
on HF ham bands without taking a Morse code exam is a crime. Therefore,
you are a confessed criminal.

Larry Roll K3LT wrote:
> It is only by attempting to enter the ARS that one becomes obliged to meet the licensing requirements. However, this entry itself is entirely voluntarily;

The attempt is voluntary, Larry, but the entry is not. All HF hams are required by circumstances (existing at the FCC) to pass a Morse code exam. What is it about "required" that you don't understand?

Requirements are not voluntary. Requirements MUST be met. Voluntary implies a choice. HF hams have no choice when it comes to passing a Morse code exam. HF hams cannot volunteer NOT to meet the Morse code requirements. Only non-HF hams and non-hams can volunteer NOT to meet the Morse code requirements. HF hams have absolutely no choice. Please tell me the name of just one HF ham who volunteered NOT to pass a Morse code exam.

> Therefore, he is never "forced" (required by circumstances) to do anything he doesn't voluntarily agree to do.

If that is true, there has to exist some HF hams who weren't required by circumstances (existing at the FCC) to pass a Morse code exam. Where are those guys, Larry? I don't know of any. HF hams who volunteered NOT to take a Morse code exam are criminals.

> >> Produce a person who was forced to learn morse.

> I may have been "required by circumstances" to learn the Morse code,

Thanks, Larry. "Required by circumstances" is the Webster's definition of "forced". You have earlier said that your Morse code skill was "produced with effort". That's another Webster's definition of "forced". That one is in your cheap dictionary.

Larry Roll K3LT wrote:

> Well, that may be comforting to you, but here's the monkey
> wrench in the works: I'm an "HF ham," and nobody "forced" me
> to do a damn thing!

You have already admitted that you were *required by circumstances* (FCC regulations) to take a Morse code exam. "Required by circumstances" is the Webster's definition of "forced". You previously admitted that your Morse code skill was *produced with effort*. "Produced with effort" is another definition of "forced". You as much as admitted that you had to *force* yourself to learn Morse code.

> I met the licensing requirements purely as a volunteer!

As an HF ham, could you have volunteered NOT to take the Morse code exam? Nope, you couldn't, Larry. Nocode techs and non-hams are the only ones who can volunteer NOT to take the Morse code exam. Sorry, but HF hams have no choice except to yield to the conditions required by circumstances (FCC regulations).

> Therefore, I
> must logically conclude that the definition of force, i.e. "required
> by circumstances," is somehow defective.

Then your argument is not with me, it is with the Webster's dictionary. Please take it up with Barnes & Noble.

> I would define "forced" as
> "motivated by coercive influence or threat of negative consequences."

That's one definition of "forced" but certainly not the only one. English words often have multiple definitions all of which are valid.

You can say, "I was not motivated by threat of negative consequences when I became a ham".

I can say, "You were required by circumstances to pass a Morse code exam".

Both statement can be true because of the different definitions of "forced".

I have graphically diagrammed my argument using symbolic logic and
the rules of classical logic. There is nothing wrong with it.

Please produce just one HF ham who used his free will NOT to take
a Morse code exam, Larry. That's the only way you can prove that
you are right.

Well put Mark,

I see nothing wrong with a friendly e-mail to your particular area(division) representative(director) to inquire about their position re. 11 meters. Should they respond that there is no ARRL position; Politely refer them to RM-9807 and let them know that this is considered by many 11 meter interests to have been league involvement in an issue for which they claim to have "no position." This is no longer acceptable and they now have another aspect of "league involvment" to consider for your vote.

I do NOT, however, agree with trying to get the ARRL to lobby the FCC on behalf of 11 meter interests, merely NOT to involve themselves in 11 meter rule making proposals by and of legal 11 meter interest groups/individuals.

Other than that, good luck and BRAVO on a "heads up" call.

>Telephones, cable service, airlines and the like have been deregulated

Personally, I'm satisfied with my telephone and cable service. They're far from
perfect, but in all honesty I can say that they're better than they were five
and ten years ago. As for airlines, I can't comment, since I haven't flown
anywhere for about 15 years.

>for some time. Prices continue to go up; service goes down. As far as
>amateur radio, I've noted a number of newer ops, mostly using voice
>modes who have some pretty bad operating habits and a pronounced
>"accent". It hasn't kept me from working some of 'em.

So now you're attacking accents? That is a very veiled and subtle racist
statement. The fact that you work such stations dosen't change this.

No one has ever made such a statement that ham radio would have an "explosion
in growth" with professionals and technical types. This is your distortion of
the facts. But I suppose if there was such an "explosion" they wouldn't count
because they didn't pass the "real" code test.

Dwight, Dwight, Dwight...,

I have to go easy on you because you were a coastie...well, sort of anyway. This'll get flamed something terrible by the "Dick & Dwight Comedy Show" but here we go.

>There is no animosity towards CB'ers. Instead, there is animosity >towards what some in the CB community do (and, yes, those people are >very much the majority).

You, Dwight are as wrong as two left feet! Yes, there IS animosity toward CBer's. Yes, SOME engage in behaviour that is offensive to MOST hams as well as MOST CBer's. NO, NO, NO, Dwight...these people are very much NOT the majority. Your broad generalizations bear out that you have NOT the slightest idea of what you're talking about re. 11 meters. You may cite your 25 years of experience and allude to how you "know of" and have monitored the "whole" band...but your inaccuracy shows that you really haven't got a clue.

>In other words, the resistence in the ham community towards CB'ers is >nothing more than similar efforts in "real" communities to keep the >criminal element out.

In other words, you're an rf bigot.

>We have a nice community and we don't want to see the streets >(frequencies) in that community taken over by criminals (freebanders, >linear freaks, rude operators, or whatever).

In other words, you're an rf bigot.

>Of course, just like in "real" communities, "decent" people are always >welcome (including those from the CB community). However, just like in >"real" communities, that CB'er will not be immediately accepted just >because he expresses an interest in joining this community. Since even >the "decent" CB'er has spent time hanging around bad people, he is >going to viewed with suspicion, and mistrust, until he has proven himself >(has that license, acts like a ham, etc).

MORE RF BIGOTRY!!!, but at least you threw in:

>"decent" people are always welcome (including those from the CB >community).

......but felt it necessary to qualify it with......

>Since even the "decent" CB'er has spent time hanging around bad >people, he is going to viewed with suspicion, and mistrust, until he has >proven himself (has that license, acts like a ham, etc).

Yeah and some of my best friends are CBer's...yada, yada, yada...! I've gotta tell you though, you two make a good tag team! Your neat little explanation of the "imagined" animosity and your "expert" knowledge on the behavioural habits of the "general" CB populace may fly with those who want to believe that. But to those who have "been there and done that," your know-it-all claims are as transparant as saran wrap.

This shows that you don't know the difference between flagrantly violating the law, and working through proper legal means in an effort to change the law.

Posting an opinion is one thing. Posting an opinion under the guise of it being
an actual fact is quite another. In such cases, I expect to see some proof.

And it takes too damn long and Germany is an easy one to work. The hard ones
WANT DEMAND more. The whole thing is a racket. EQsl Must and soon WILL
exist. If ARRL does not do it soon some will and start independent awards
that will destroy the ARRL monopoly. Yes the Dxers will have to find another
way to make money, BUT , they will save a LOT by not printing cards.

I'm quite aware of the other requirements. I'm also quite aware, evidenced by
the subtle postings of many in this newsgroup, of the caste system that exists
with in amateur radio, with regards to newer licensees.

Naw, just wait 3 months, and you'll get 15 cards from Germany in
your "Buro" envelope, 34cents for the whole stack. You're just too
eager to spend money.

Ahem...you might want to amend one word in the "advice."

Once a pugnacious drunk wandered into a gay bar and announced "I can lick anyone in the house!" You can guess the rest... :-)

Do I need a Charles Atlas course? In Internet terms I am 8' 4" and 560 pounds with 3% body fat and can bench-press a Schwarzenegger. Almost as strong as others claim they are.   :-)

Please let it be without music...no violins. :-)

Meanwhile, back to accepted amateur radio policy subjects like Commercial Drivers Licenses, politics, drugs, firearms, and espionage...all approved by amateurs for amateur radio policy discussion.   :-)

On the contrary, the FCC welcomes comment from any citizen
on FCC regulations for any radio service, does not exclude
anyone. They say so in their "FCC Manual." Check it out...free
download on the Internet or pay a small fee to the US GPO for a
printed copy.

Glaucoma seldom results in "coke bottle" eyeglasses. Glaucoma is an increase in internal eye pressure resulting in eventual retinal damage. While there is some defocussing of the lens, it is not to the extent of needing extreme correction via "coke bottle" glasses. Usual correction procedure is a topical liquid medication to reduce internal eye pressure. That is what I have.

There are no symptoms of the onset of glaucoma. A simple painless pressure check will determine it. No check may result in advanced glaucoma that can result in blindness.

A lot of those rare dx-peditions might not wanna use a freebie
service because some of the excess 'green stamp' proceeds aid in
defraying the cost of the expedition.

  With the morass that CB becams, spawning the "freeband" movement that
has continuously boten more and more brazen as time advances, you don't
see any reason for FCC to wish that most of them would give it up in
favor of a easy ham license? It's only logical and certainly an easy way
out of difficult enforcement headaches. Or wishful thinking.

  They simplified the structure because the old 6-tiered
> system was difficult to administer and a pain in the arse to enforce.
> The FCC's only interests in the ham bands are the efficient
```

> enforcement of existing regulations, modifying existing regulations to
> make enforcement easier and more efficient,

Anything to make life as an FCC staffer more accomodating in the face of
a recaltricant congress...and after while thiniking more of those issues
instead of focusing on the work at hand naturally causes that work to
suffer from neglect.

and to farm out, sell,
> rent and other wise create revenue from under utilized portions of the

Naw, it has been made pretty clear by them that anything they can do to
eliminate need for direct oversight of the ARS is beneficial to them and
likely to becomne fact. Regardless of the possibility, even liklihood,
of negative effects resulting.

That is an example of construction-assembly ability and
would pose an inordinate burden on the VECs, both for
time and capital equipment for testing.

All the PCTAs have posted that the US amateur radio license
is for an OPERATOR so no assembly or construction skills
are needed. :-)

Larry,

Thanks for the info! Looks like I can drive more vehicles than I thought.

So I'll rephrase my rhetorical question: What happens at 26,000 pounds that
suddenly makes me unsafe to drive? Why am I safe for 26,000 but unsafe for
26,001? Why am I qualified to carry 15 passengers but not 16?

Answer: Because the DMV had to set the dividing line somewhere.

Yes, but the necesary force requires trivial effort. Now Cecil will
analyze that aspect of it all.

Bottom line: You have totally trivialized the term "forced" into
something much less 'forceful', indeed very ordinary. You have made it
the exact equal of "required". In so doing, you have lost the entire
impetus of your argument.

From what you have said now, it appears YOU want the
code test as a means to draft new code users...which

is not the purpose of the requirement. If someone sends
poor code does that have a BIG effect on other hams...or
only an effect on the other person trying to copy code.

If you want to hype the narrowbandwidth value of morse
over voice, that's fine, but the FCC sure hasn't bought
that argument as a justification for code testing.

Cheers,
Bill K2UNK

Sounds like a good thing to me. Even the "non-prior outlaw" group
of hams has it share of "bad-habit" characters.

>Many of these folks would have become hams straightaway, but they perceived the

Sounds like a good thing to me.

.....
>I'm not passing judgement on any of this - just reporting what has happened.

The impression you gave originally implied bad things.
Your clarification indicates pretty good results.

Cheers,
Bill K2UNK

There are enough holes in it to fly a 747 through. But then again, you
can dismiss anything as irrelevant and change both conditions and
definitions to suit your argument. I don't have a personal problem in
this. I don't accept your view. Nothing can be settled unless you and
I agree that it is settled. I have not agreed.

No one is forced to learn morse code.

> I think we can reach agreement on what we are both saying if we replace
> the word "forced" with the definition of "forced" that we are each using.

> Morse code", I will agree that is a true statement given your very narrow
> definition of "forces".

You mean, my narrow definition when compared to your, "everything I do
is required by circumstance" definition? I surely wish I could take you
seriously, Mr. Mensa.

> > Under your peculiar supposition, we are all required by circumstance to

> Mother Nature might as well be holding a gun to your head.

I gave you a fairly lengthy list of items, all of which you described as
"required by circumstance". These were the kinds of things which a
normal person would never say are forced on him like picking up a
newspaper. But to you they all were. It is apparent that you do not
believe in free will or choices open to man.

Mother nature, by the way, is a ficticious character.

Dave K8 Mother Nature

Well then, I sincerly thank you for accepting my view. If you were not
"required by circumstance" to learn morse code, you'd be hard pressed to
state that others were given that all had options to undertake it.

I take this as pretty much of an admission that your view of "forced
learning of morse" are a Texas tall tale.

> > I surely wish I could take you seriously.

But you have insisted that even the most mundane and ordinary daily
activity is, in some manner, "required by circumstance". Are you now
stating that this isn't necessarily true?

...not unless these characters were ordered by a judge to become HF
hams. Amateur radio is not a mandatory activity any more than newsgroup
posting is.

You're writing more Bravo Sierra, Cecil. My statement was: No one is
forced to learn morse code.

No one is forced to enter amateur radio....absolutely no one. Produce a
person who was forced to learn morse.

I am aware of none. I'm the one who maintains that no one is forced to learn morse code. It is only within the last few posts that you've come around to my way of thinking. I believe that we have choices open to us in undertaking any action. Of course there can be consequences to our choices but we still have the choices open to us.

> > A statement does not become irrelevant because you say it is irrelevant.

If a guy sez, "Ham radio still requires passage of a morse code exam. I'm not going to learn any stinking morse code", that is his choice. He had options. He was not forced to learn morse code and he was not forced to enter amateur radio. Then again, he is not going to become an HF ham.

I just pinned your conundrum.

Yeah, not proofreading before sending sounds pretty bright.

How do you know what my views of morse testing or use were during those
years? Pretty dismissive comment coming from a fellow armed with few
facts.

Telephones, cable service, airlines and the like have been deregulated
for some time. Prices continue to go up; service goes down. As far as
amateur radio, I've noted a number of newer ops, mostly using voice
modes who have some pretty bad operating habits and a pronounced
"accent". It hasn't kept me from working some of 'em.

I've already accepted that and I've been living with it. I'm still
looking for the explosion in growth. According to some, many of the
newcomers will be professionals who will dazzle us with technological
advances. I'm waiting for that too.

No one who desires to become a ham is turned away at the gate--not even
Leonard H. Anderson. Allowed to become a ham? Is this your pet phrase.
I acknowledge that there are examination elements required. That still
doesn't mean that anyone is forced to undertake them.

No one is forced to learn morse code. No one is forced to become a
radio amateur.

> I will meet you halfway. I will agree that no one holds a gun to the

That's awfully kind of you.

You can't lose when you change the statement, dictate the definitions
and set the conditions. Of course you'd have to have the aquiesence of
your opponent. Unfortunately for you, I'm not agreeing to that.

> > Doesn't win you many points though.

Any time someone gets into a discussion with you here, he'd better be
aware that he's going to end up playing a silly game. I've not forgotten
that you've said that nothing you post here is to be taken seriously.
You're never hear for real debate or discussion.

> > Do whatever you need to do in order to think yourself a winner.

As with your arguments, there had to be a change in the conditions
before it could happen.  Weren't the you the guy who told us that you
would not ever take the Extra exam?

Man, I wish I could take you seriously.

You're having a senior moment, Leonard H.  That was precisely my point.
You were giving me hell about jumping in.  Try to stay with the flow.

So when you do these things--using the German military terms, assigning
ranks and coming up with the droll names, that is humor. When someone
else does it to you, it is an attack or denigration. You certainly have
a dual standard.

> Quit acting like some bad stereotypical Oberst. This is not the

The posting of an entire article from a web page was needed because you are not a MARS official. That defies belief!

> > Are you a MARS member?
>
> No. Are you?   :-)

I was from 1968-70 and from 1980-85. You may recall that I've been overseas for fifteen years.
>
> The USAF MARS home page gave membership requirements

I can sell beef and be a vegetarian. You aren't an FCC commissioner or on the FCC staff and don't regulate amateur or any other radio. You aren't even a participant in amateur radio.

> Why are you jumping in on a thread Barking Orders? Aren't

>
> Wow, this amateur radio activity is sure tough as a hobby!

What's your hold up in getting your license, Leonard H.? You've been shedding skin cells on this planet for seven decades. What is it you are waiting for? It may be tough for you to swallow but until you go ahead and take the plunge, you are an onlooker, a bystander, a sidewalk superintendant, and SWL, a wannabe. If you had any serious interest in obtaining an amateur license, you could have had it in the several years you've wasted blathering here. Study material is available.

Good luck with that 5 wpm!

Dave K8MN

Truth? You've boasted that nothing you post here can be taken
seriously! Logic? When you change the conditions, call any statement
made by your opponent irrelevant and make the definitions? The American
Way of Life? Maybe some Texas rustic Libertarian variant...

>Gosh, I thought all these public messages were public.
>Seems to me that anyone can "jump in" on public
>postings. Guess that isn't "supposed" to happen in
>the good Oberst's orderly little world

Nor in yours, Lennie the Undecided. YOU have chastised ME for having the temerity to comment on your "comments" to third parties as if I had tapped your private e mail.

Of course, I expect no less from you.

>Ah, so the Oberst Gives Orders on what is acceptible for
>posting and what is not acceptible.

Gee...I WONDER from whom he got THAT idea...???

>Quit acting like some bad stereotypical Oberst.

Ahhh...but LENNIE! Why should YOU be the only one to have some play-fun time?

>This is not the
>Waffen SS. You try but cannot cow anyone with all the Orders,
>cowboy.

What's WITH you and the NEED to assert that anything stated contrary to The Word of Lennie MUST be Nazi? In this post and others you have been riding Dave with the same neo-Nazi crap that you pummeled ME with?

Of course, you have since denied DOING those things, yet here you are, once again, caught in ANOTHER lie. But don't worry, we weren't surprised.

>This is not a playground to act out your control-freak fantasies.
>I know that is disturbing news to you but try to accept it.

You should read what you write, Lennie. Seems YOU are the one with the comprehension problems here.

>Does the FCC require Commissioners or FCC Staff to have
>amateur radio licenses in order to regulate US amateur radio?

I find it amusing that this was posted at 9:11...mostly because all of Lennie's stuff is in dire need of assistance...like some TRUTH.

>I guess all that stuff about the Tennessee STATE Guard is
>"not accurate.

There are some CURRENT changes that are NOT reflected on the Web Page, Lennie...which only PROVES my assertion that you CANNOT take what you read on ANY web page as verbatim fact.

>>You ASSUME the webpage contains all the information that is
>"essential".

>You betcha.

And proof positive that you assume the worst...the worst since you think this stuff is essential or even current.

>You seem to be claiming some webpage is "inaccurate" just
>because a newsgroup opponent presented it...while anything
>Robeson presents via webpage is absolutely truthful.

No...it's inaccurate because it's neither timely nor is it necessarily complete.

You assume it is both and present it as absolute fact.

An engineer should know better. But then, it is YOU we are talking about.....

>This is getting to be in the area of Oberst Heil's "definitions"
>where he and only he defines the "truth" in messaging.

Nope...just once again laying your rants to waste.

>program very soon. The organization is simply not meeting its >obligation. Most overseas military installations, even the largest ones, >have no MARS operation in place. Of those which do, most have a >difficult time staffing those facilities.

Agreed on the staffing, Dwight, but not the rest.

In most cases, the mission of MARS has shifted significantly. In the case of Air Force MARS, it is no longer centralized around H&W traffic, but in supporting various installations with "Base Support Teams", groups of Amatuers who can help with ancilliary communications ON the facility.

That, obviously, is almost impossible to do on an overseas facility.

> If you live near a military installation, consider conducting classes, >and exam sessions, targeted towards military personnel. Make sure to >introduce MARS during those classes. Offering classes to military >ROTC programs is also a good idea.

Excellent ideas.

Another program being used by NAVMARCORPS MARS and AFMARS is to incorporate the activities of the USCGAUX and the Civil Air Patrol. Army MARS is being used by various State's Guards and Defense Forces.....contrary to what Lennie might tell you......

I'm just pointing out that the old Soviet requirements were much tougher than
anything US hams have been required to do.
>
>Why would you impose so many things on newcomers that
>you did not have to do?

Did I write that I wanted this sort of thing for a US ham license? No.

And how do you know what I had to do? As a matter of fact, I built my first SW
receiver and amateur transmitter. I also built many since then, including the
setup I use now.

I DON'T ask others to do what I haven't done.

>Are you trying to make US amateur
>radio more exclusive by excluding some newcomers?

Nope. Why do you think that?
>
>Why do you want ot make an avocation into some sort of

>--

Simple:

If I use Morse, I use far less spectrum than any voice mode. That leaves lots more room for other hams.

If I use Morse, I can run far less power and still have the same S/N ratio at the receiving end. Less QRM for other hams.

Those are good things.

Nope. HE faces the death penalty, y'know.

But on a serious note, consider this: A while back the guy in Massachusetts who
shot up his workplace and killed seven innocent people was mistakenly
identified as a ham. Turned out there were two people with exactly the same
name and similar descriptions living in the same town.

>Hint: The FCC regulates US amateur radio.

We KNOW, Len. Is the FCC infallible in its regulatory decisions?

>It has done that since
>1934.

And before them, it was the FRC. Before the FRC, it was the DOC.

Doesn't mean they are infallible.

>The FCC doesn't require Commissioners or FCC Staff to
>hold amateur radio licenses in order to regulate US amateur
>radio.

So? What's your point?
>
>>My point was not to rehash the old arguments for or against code testing,

>
>There are many in here who rationalize about all newcomers
>having to do just like they did.

Who? Not me. My point was that it's not one of MY reasons.

Show me where I've posted "I did it, so you must do it too" as a reason for
keeping code tests. The only place I've seen it is in the posts of nocodetest
folks who claim to know the motivations of others.

> In another post you seemed to
>want all newcomer to do Much More than you had to do...

That's YOUR misinterpretation. Show me where I wrote that American hams should have to do what used to be required of Soviet amateurs.

And by the way, I did all of those things. And I can still do them. Not only did I design and build my current HF ham station, and many of its predecesors, I can explain its operation in detail. And it wasn't a copy of any published design.

>Which is it?

Read my posts and set your biases aside, Len.

The over-reaching imagination here is yours. Not mine.

>>I think my PA driver's license allows me to operate vehicles up to 10,000
>>pouinds GVWR. Beyond that, I need a CDL.(Weight is not the only criteria, of
>>course, but it is one of them). What happens at 10,000 pounds that suddenly
>>makes me unsafe to drive? Why am I safe for 9,500 but unsafe for 10,500?
>>
>>> No such similararity
>>>exists regarding the privileges between tech/gen/extra.
>>
>>Sure it does. Listen to the HF ham bands and see how much Morse you hear.
>
>Why not listen to ham bands above 10 m? Tell us how
>much morse code you hear there.

Morse is used far more on the HF and MF ham bands than on VHF and UHF.

>
>Commercial Driver Licenses are COMMERCIAL.

In the context of driver's licenses, the word does not mean "for money". To
legally drive a motor vehicle over 10,000 pounds GVWR in PA requires a CDL,
even if I drive it as an "amateur". But I can be paid to drive my car without
one.

>US amateur
>radio is defined as "a radio activity not having pecuniary
>interests." That's "amateur" in any definition.

Driving many vehicles "without pecuniary interest" still requires a CDL,
though.
>
>Do you want all amateurs to become commercial operators?

I want them to have the basic skills and knowledge of the amateur radio
service.
>
>>>Indeed,
>>>the lowest license (Tech) can build and play with the highest power
>>>levels at frequencies ANSI considers more dangerous than HF
>>>at the same power levels.

necessary qualifications.

>
>By keeping the morse code test for HF privileges, it insures
>that SOME newcomers will know morse (your favorite mode).

So? Is that a bad thing?

>It also insures that many newcomers will not accept or
>bother with HF-privilege class license testing, thereby insuring
>a minimum of operators.

How does it do that?

>Exclusivity.

Qualification.

> All for a "better" IN-
>group...to your personal liking.

To my judgement.
>
>Seems a pretty clear thing to me, old-timer.

Nope. You're projecting your biases onto others.

> It's not an
>"environmental" or "resource" thing at all..

Sure it is. Morse signals use less spectrum than voice signals.

>.just another
>manifestation of "that's the way you had to test and therefore
>every newcomer has to test the same way."
>
In your imagination, maybe. Not in fact.

I tested in front of the FCC. I didn't advocate going back to that because it's both inconvenient and impractical. I took 13 wpm to get a General, and the General written was one element. I didn't advocate that, either.

>Rationalize all you want.

I'm just telling it like it is. Why does that bother you so much?

> Keep on insuring that US amateur
>radio turns into the "US Amateur Radiotelegraphy Service"
>to keep the 1930s alive and well in a living radio museum
>of the air.
> Keep that "morse resource" alive long after its
>usefulness to the nation.

What ARE you talking about?

I recall that way back on January 19, 2000, you told us you were going for an Extra "right out of the box". Hasn't happened yet, though. Guess those new writtens are too tough, huh?

Dave Heil wrote:
> There are enough holes in it to fly a 747 through.

Let's reduce the scope to keep it simple. Exactly where are the holes
in the following?

Premise:
All HF hams are required by circumstances to pass a Morse code exam.

From Webster's: "forced - required by circumstances".

Conclusion:
All HF hams are forced to pass a Morse code exam.

Please show me the holes in the above (and only the above) without muddying the waters by resorting to diversionary tactics. I'm not going to respond to any of your diversions. I will respond to any holes you find in the above premise/conclusion.

> I gave you a fairly lengthy list of items, all of which you described as

> believe in free will or choices open to man.

The reason you are unable to change your mind in the face of overwhelming evidence is that you are predestined to have a closed mind that believes in free will.

I agree that those are good things but one single ham choosing one single
mode is not a BIG effect on the other 600,000 hams. I've never heard you
on any mode so it has had absolutely no effect on me.

Methinks you should change your statement from "my use of CW has a BIG
effect ..." to "thousands of ham's using CW has a BIG effect ..."

I am not accepting your view, Dave. Just because I and a few others are
exceptions to the rule does not change the fact that MOST HF hams are
required by circumstances to learn Morse code. I never said that ALL
HF hams are required by circumstances to learn Morse code. I've said
that most or the majority of HF hams are required by circumstances to
learn Morse code. However, ALL HF hams are required by circumstances
to pass a Morse code exam. Since you keep diverting away from that
statement, you must believe it to be true.

> I take this as pretty much of an admission that your view of "forced

> learning of morse" are a Texas tall tale.

You take wrong. If they don't already know Morse code, HF hams are required by circumstances to learn Morse code. That there are a few people who already know Morse code is irrelevant.

On another thread, I presented a premise and a conclusion for you to use to indicate holes in my argument. Let's focus our discussion into one branch of a thread for obvious reasons. You can have the last word in all the threads except the premise/conclusion thread.

Dave Heil wrote:
> But you have insisted that even the most mundane and ordinary daily activity is, in some manner, "required by circumstance". Are you now stating that this isn't necessarily true?

Just because something is mundane and ordinary doesn't mean they are not required by circumstances. Eating is an example. Seems more things are required by circumstances than you realize. But some things are not required by circumstances.

> ...not unless these characters were ordered by a judge to become HF hams.

Being ordered by a judge is not the only way to be required by circumstances, Dave. I'm sure you realize that.

> No one is forced to enter amateur radio....absolutely no one.

I never said anyone is forced to enter amateur radio so your statement is just another of your strawmen diversions.

> Produce a person who was forced to learn morse.

If I remember right, Larry was required by circumstances to learn Morse code. Please switch the discussion to the premise/conclusion thread.

So you agree with my above position?

The sheer number of parallel threads have gotten out of hand. I am starting a new thread entitled "Forced code exams?". You can have the last word on the multitudes of "Pride" threads.

To simplify things, here is a premise and a conclusion. Please point out any holes in it.

Premise: All HF hams are required by circumstances to pass a Morse code exam.

Quote from Webster's: "forced - required by circumstances"

Conclusion: All HF hams are forced to pass a Morse code exam.

Please don't continue to muddy the waters with your plethora of diversionary tactics.

Read my lips, Dave. I have not come around to your way of thinking. A few
HF hams were not forced to learn Morse code because they already knew it.
MOST HF hams are indeed required by circumstances to learn Morse code.
Please switch to the "Forced code exams?" thread.

> If a guy sez, "Ham radio still requires passage of a morse code exam.
> I'm not going to learn any stinking morse code", that is his choice.

That's true, Dave, but irrelevant. That guy is not an HF ham so my
statement doesn't apply to him. HF hams who didn't already know
Morse code were required by circumstances to learn Morse code. The
reason that the above guy was not forced by circumstances to learn
Morse code is that he is not an HF ham. Please switch to the "Forced
code exams?" thread.

Nobody has ever said that anybody is forced to become a radio amateur.
Why do you insist in reposting that red herring?

HF hams who didn't already know Morse code were forced by circumstances
to learn Morse code. Please switch to the "Forced code exams?" thread.

Your entire premise is diversionary. My statement was: No one is forced
to learn morse. Please try to stay on track.

> > I gave you a fairly lengthy list of items, all of which you described as

Diversionary. You did not respond to what I wrote. You have told me
that even the most ordinary daily event is required by circumstance.
I disagree.

It is a diversionary tactic. No one is forced to learn morse code.

Yes, but I was wrong. I can see the problem you are having if you
consider yourself to be so omniscient that you cannot ever be
wrong and therefore you never change your mind for any reason
whatsoever.

...except it is not the statement you originally took issue with.
You can't win unless you can change the statement, provide the only
acceptable definition and are free to dismiss any statement provided by
me as irrelevant or diversionary. Sure wish I could take you seriously!

That obtaining an HF ham ticket is not mandatory is certainly relevant.

That's awfully big of you in that it isn't yours to give.
Tell you what: I'm going to Cincinnati this morning and will return on
Thursday evening. That'll give you some time to stew about the issue.

No one is forced to learn morse code.

Which way is it now? Let's see--you were not required by circumstances
to learn morse in the cub scouts but you were required to respond to my
posts. I think I see a Cecilian pattern emerging. If you and I had
options in learning morse code, we were not forced. I had options and
you've told me that you have options. It would seem that everyone has
options. No one is forced to learn morse code.

> > ...not unless these characters were ordered by a judge to become HF
> > hams.
>
> Being ordered by a judge is not the only way to be required by

...nor did I say it was. I'm saying that I've never heard of such a
thing and that we all have options to do or not do something.

> > No one is forced to enter amateur radio....absolutely no one.
>
> I never said anyone is forced to enter amateur radio so your

Use that spell checker. It is "straw man" or "straw men". If you
weren't forced to enter amateur radio, you weren't forced to learn
morse.

> > Produce a person who was forced to learn morse.
>
> If I remember right, Larry was required by circumstances to learn
> Morse code. Please switch the discussion to the premise/conclusion thread.

I don't think you remember right.

N2EY wrote:
> Maybe you need an antenna that works.

I have a 40m EDZ pointed toward AZ and QSO with my numerous friends
around Phoenix. It works great in that direction. Unfortunately, that
puts you off the end of my 40m EDZ. I have a 40m vertical with eight
buried radials but it is worse than the EDZ even toward your area.

> Wednesday, 0300Z, 7037 plus/minus. W3RV will be there. I will try to be.

Just to be sure - Wed 0300Z = Tues 10pm EST = Tues 9pm CST
When Brian said Wed 0230Z, I converted 0230Z to 8:30pm CST
but didn't convert from Wed to Tues.

No, I didn't and of course you know it, you just can't pass an
opportunity to twist words to suit your intentions.

That must mean that you agree with the above. Please switch this subject
to "Forced code exams?".

So averaging the attitudes of the two bank managers yields 50%
difference. Why am I not surprised that the math works? The
FBI certainly wishes there were 50% fewer bank robberies.

Personally, I don't think the FCC gives a flying fig WHO gets a ham
license. They simplified the structure because the old 6-tiered
system was difficult to administer and a pain in the arse to enforce.
The FCC's only interests in the ham bands are the efficient
enforcement of existing regulations, modifying existing regulations to
make enforcement easier and more efficient, and to farm out, sell,
rent and other wise create revenue from under utilized portions of the
spectrum that just happen to be allocated to the amateur service on a
secondary (and sometimes primary) basis. The FCC is a governmental
agency charged with regulating the use of the RF spectrum. They have
no interest at all in the status of the Amateur Radio Service.

The ARRL, on the other hand, IS an advocancy (sp?) for the service,
and they certainly DO have some interest in what happens to the hobby.
I can assure you, as a member of the ARRL, that I do NOT look forward
to seeing freebanders, pirates, nor anyone else with an "outlaw"
attitude joining the hobby in ANY capacity. This is not official
dogma from the ARRL, just the opinion of ONE member...

You are a credit to metrologists everywhere. You should do
consulting for NIST on developing primary standards.

You have now equated US amateur radio to the Boy Scouts.

Here, have a Brownie...

Did anyone else notice that Jimmie likes to confuse the
issues by nit-picking, phrase-arguing, and general trolling?

Tell us, oh Lawgiver, that the FCC does not welcome comment
from any citizen on anything, amateur radio included.

Tell us that only already-licensed US radio amateurs are
allowed to judge, rule, and otherwise establish all criteria
on and about amateur radio.

All amateur radio operators are required by circumstances to qualify for an amateur radio license. Are you saying hams don't have to satisfy any requirements? Hams have to satisfy the requirements, Dick. "Have to" is another way of saying "forced".

> > The federal government forces amateur radio operators to meet the requirements for an amateur radio operator's license.
>

> But you already said that no government requires you to get that
> license. So your ass-ertion is still wrong on its face.

One more time, Dick. Read it slowly this time. Amateur radio operators
are forced by the federal government to meet the requirements for
an amateur radio operator's license. That's what governments do.
Please list the names of any hams who were not forced by the FCC to
meet the requirements for entry into the amateur radio service. The
only people who are not required to meet those requirements are not
hams.

Hey, that was fun! Been a long time since I've participated in a CW "roundtable". We gotta do that again some time.

At 1010PM EST Feb 27 W3RV called the first session of the RRAP CW Net.

Checking in were;
W3RV Brian- NCS
W0EX Dick
AC6XG Jim
K0HB Hans
N2EY Jim
W6RCA Cecil

All signals were good in spite of considerable QRM and some QRN from early spring thunderstorms in the South. Cecil W6RCA reported thunderstorms in his area (southeast Texas), with sparks in the hamshack! That had to be noisy, and risky too. Gutsy guy, our Cecil. None of that for me!

Jim AC6XG initially was weak (549 here) and W6RCA wasn't able to copy through the storm static, but the skip distance on 40 meters changed and his signals improved (to 569 here) and all stations made direct contact with each other.

The same band change caused N2EY and W3RV (both in E.Pa.) to shift signal levels. Initially W3RV had been considerably stronger than N2EY but changing band conditions nearly reversed their signal levels as received in Missouri. That's a phenomena that occurrs on 40 meters when two close stations work a distant station and propagation shifts occur.

Anyone who thinks that "CW is dead" should have heard the clamor between 7035 and 7040, with a PACTOR signal occupying 7038-7040 for a time. I wondered for awhile, before the announced time, whether or not we would be able to find a free slot in the activity. Fortunately the PACTOR station left the air and we took that frequency.

Hey Jones, why didn't you check in??? <g>

We're certainly in a decent position to be able to comment on it from first hand experience.

Nice to put a "fist" to all the calls/names here on rrap. We ought to make
it a regular thing. K0CKB tried to check in at end, but Brian had to go
get a drink. She thinks he's stuck up.

And I don't understand what the sparks are all about. I have a
set of knife switches mounted on a piece of plexiglas in my
hamshack window. Those switches arc like crazy during a
thunderstorm. During the roundtable, I could hear a flock
of Canadian Geese flying around in the storm in the dark.
The actual thunder was so loud it drowned out some of the
signals.

That was my first CW net. I use a brickwall filter and everyone
wasn't on the same frequency. I had to keep tuning everyone in
which changed my TX frequency. How is that problem handled on
real life nets?

General information for rrap readers. Admiration of the skill, knowledge and determination of radio amateurs who persevere in order to get on the air, regardless of where they happen to live.

Nowhere do I propose making such requirements a part of any US radio licensing process.
>
>>>Why would you impose so many things on newcomers that

>radio operator license in the last half century...

Never been required in this country at all. I find it admirable that hams build things, that's all.
>
>You are trying to equate a personal situation with something
>not required in the USA.

I am simply stating that I don't say others should do what I have not done. I think hams should build their own gear if possible. I have done so myself since before I got a license. You seem to be bent on minimizing the accomplishments of others.

>Bad equation.

Why? Is it "bad" to build radio equipment for one's own use?

> Bad, bad, sit in a corner...

HAH! That's a good one!
>
>>I DON'T ask others to do what I haven't done.
>

>...Living at the exact same address?!?

Not the Massachusetts guy. But it could be a mistake, or a relative, or a
coincidence. Nobody thought there were two people with exactly the same name,
approximate age and general description in a small burg in Massachusetts, but
there were.

>Try reading the Affidavit
>and the FCC database for addresses.

Does the affidavit say the alleged spy and the ham in the database are one and
the same person?
>
>Denial is a strong emotion that defies logic and rational
>thought.

Then why do you do it so much, Len.

>Try not to practice it.
>
I don't. I was simply advising caution before jumping to conclusions.

One thing about double agents - they are never really trusted by the "other
side". If he had managed to escape to Russia, they would watch him very
carefully.

making
> proposals by and of legal 11 meter interest groups/individuals.

It should be pointed out that groups other than the ARRL, or Ham Radio related organizations, often get involved with Ham Radio issues. It happens all the time. Whether it has to do with the desire to get more spectrum for a commercial application, or public agencies like the LA police looking for spectrum for aerial TV surveillance, and so on. Likewise the ARRL gets involved with issues such as Part 15 and Part 95 devices, whose operation, or future potential operation, poses an interference issue for Hams, and protecting our spectrum from intruders.

As far as the ARRL getting involved in the 11m band issues, it is nothing more than business as usual to watch out for the interest of Ham Radio. Let me refresh your memory a little bit, it was due to the use of linear amplifiers, illegally on the 11m band, that prompted the FCC to enact the rules which crippled or eliminated the commercial sale of any amplifier that will function over the range of 12m to 10m. Granted that most of those amplifiers never operated on the Ham bands by a CBer bootlegging, it never the less impacted the Ham Radio community. And this is an activity that occurs on the 11m band, almost exclusively for all practical purposes. The argument is valid because it DID affect the Ham Radio community, while to what degree is not really the point. Nor is it the point about how easy, or difficult, it is to modify the amplifier to restore the ability to function on those bands either.

That in a nut shell is why I think the ARRL has a legitimate interest in what goes on in the 11m band, even if the immediate view appears not to affect Ham Radio. It's like the nose of the camel in the tent. If you don't watch out, and act quick, you end up with the rest of the camel inside. Then it's too late.

> And I don't understand what the sparks are all about. I have a set of knife switches mounted on a piece of plexiglas in my hamshack window. Those switches arc like crazy during a thunderstorm. During the roundtable, I could hear a flock of Canadian Geese flying around in the storm in the dark. The actual thunder was so loud it drowned out some of the signals.

I switched in my amp so Cecil could hear me. I heard everybody Q5. Had some QSB on the East coast stations. Hans was loudest. Lots of signals on the band. Somebody at 20 over came up a few hundred Hz above us and I've just got the stock filter in there right now. I ran the PBT all the way to the peg and got rid of him. I think I need Pa. so I'll QSL. I enjoyed hearing all the familiar calls checking in. Pretty neat. I'm the least experienced op in the group - and it probably showed a bit. Sorry if I was too long winded, guys. Anybody hear any gravel on my CW note?

> That was my first CW net. I use a brickwall filter and everyone wasn't on the same frequency. I had to keep tuning everyone in which changed my TX frequency. How is that problem handled on real life nets?

RIT? ;-) I turned off my DSP so I wouldn't miss anybody, but I think we were probably all within 150-200 Hz or so of each other. The difference in offset from one rig to another can run that much.

Great job running the net, Brian. Thanks very much. I hope we give it another shot in the future. Forty worked great for us.

Was that you tuning up on top of us at the beginning of the net, Hans? ;-)
I could hardly hear Brian with all that racket. I could tell Jim had his
bug set for about 30 WPM at first. Thanks for not using any of that swing
we talked about, Hans. Cecil's got a pretty steady fist with that straight
key, don't you think? I appreciate being invited to be a part of the
notorious group. Haven't been on CW much since Field Day. Thanks for the
excuse to get on the air again.

Well they wouldn't have to worry about trusting him with a ham license. He certainly wouldn't use outdated CW to send secrets. He was much more sophisticated than that...   :-)

From Tucows PDA News:
Quoted: Hanssen allegedly tried to sell the Russians on using handheld Palm VII organizers. According to the FBI affidavit, Hanssen wrote his handlers, "we do need a better form of secure communication -- faster." "The VII version comes with wireless internet capability built in," Hanssen allegedly wrote. "It can allow the rapid transmission of encrypted messages, which if used on an infrequent basis, could be quite effective in preventing confusions if the existence [sic] of the accounts could be appropriately hidden as well as the existance [sic] of the devices themselves. Such a device might even serve for rapid transmittal of substantial material in digital form."

Damnit, Jim -- I'm an amateur, not a professional! This is a voluntary hobby, and just because there are government regulations that must be obeyed in order to practice this hobby, doesn't mean I'm being forced to obey them. I do so voluntarily, gladly, willingly. I totally agree with what little regulation still exists over this hobby -- I wish there were more. Government does have a legitimate role, particularly

when managing finite, shared resources such as the radio spectrum.
For the government to de-regulate this hobby and give away full
privileges to as many people as want them with dumbed-down
licensing requirements doesn't make a bit of sense to me! So, with
all due respect, Jim -- "get real" yourself!

>If you had not been required by circumstances to learn Morse code,
>you would not have learned it. My argument was (is) that hams
>will learn Morse code without it being required by the FCC.
>Remember?

Cecil:

The term "forced" implies an external influence. How can one be
"forced" to do something which he MUST volunteer to do of his own
accord? Nobody gives a rats ass whether or not I obtain or upgrade
a ham ticket. Therefore, nobody is "forcing" me to meet the
requirements. I do that strictly on my own volition, free of external
influence. That the requirement exists and must be achieved in order
to obtain the goal is a mere fact; it is not "force."

Cecil:

If any force was applied to me to learn the Morse code, I applied it to myself. I did, admittedly, disagree with the requirement at one time. However, at that time I was looking at the situation through the eyes of a selfish and immature individual. Once I grew out of that particular mental state, and began to accept responsibility for my own personal growth, I realized that the Morse learning/testing requirement was valid, essential, and eminently practical. Not surprisingly, it was at that time that I realized that nobody was "forcing" me to take the Morse code tests. They became a rite of passage which granted me entree into a worthwhile activity, and as such, I was more than eager not only to meet these requirements, but to excel at them. Go figure.

>
>Earth to Dick: Forcing their citizens to obey regulations is one
>of the things that governments do for a living.

Earth to Cecil:

I am "forced" (required be the presence of negative consequences) by the government to pay my taxes. If I don't pay them, I can receive stiff fines and even a jail sentence. That's quite a gun to my head -- and to keep it from firing, I keep sending a totally unfair portion of my income to the government every April 15th.

I am not "forced" (required by any damn thing whatsoever) to take a Morse code test for an amateur radio license. If I choose not to do so, there is no negative consequence, apart from simply not being granted permission to do something that I could already live without doing. Trust me, if I "choose" not to pay my taxes, the consequences are not nearly as benign. I can't live very well without my freedom, or if I lose my financial independance due to being "required by circumstances" to pay heavy fines to the IRS.

For there to be "force," there has to be some sort of gun to your head. Not being granted a ham radio license isn't even a straw with a spit-ball in it.

Jim:

Whining no-coders won't be satisfied until the code testing requirements are eliminated.

The present code testing requirements are dumbed-down to insignificance, and now, Cecil is satisfied with them. I'm sure that when they are totally eliminated, he will be even more satisified with the "code requirements."

Cecil is just another whining no-coder.

Cecil: Type your way out of that one, logic boy!

What about Texas liberals? They're the worst, by far. Remember that it was a Texas liberal (LBJ) who got us mired in Vietnam, started the whole US welfare state setup with his "Great Society" programs, and funded the whole mess with deficits. And all the while the real problems of society (like overdependence on foreign energy, and an aging industrial infrastructure) were ignored, setting the stage for the staglfation of the 1970s and the huge national debt that we are only now beginning to pay off.

LBJ was so awful he makes Richard Nixon look good.

Because a competent ham who got his technician license in the 50s,
who has an engineering degree, who had a commercial radio license,
who for years was chief engineer at an AM broadcast station, and
who tried for hundreds of hours to get his code speed up to 13wpm,
was not allowed reasonable privileges on HF ham bands until the 90s.

Here's Larry logic in action:
Cecil is satisfied with the present requirements.
Whining no-coders are not satisfied with the present requirements.

Therefore: Cecil is a whining no coder.

Why am I not surprised at your continued use of invalid logic?

> Cecil: Type your way out of that one, logic boy!

I just did, Larry, where were you when we had the r.r.a.p
CW net last night? Does joining a CW net in the middle of
a severe lightning storm sound like a no-coder to you?

Depends on how and how much they are reduced. For instance,
I don't see much utility in requiring the examinee to know,
off the top of his head, the answer to the following:

"What should be the approximate capacitance of the resonating
capacitor in a gamma matching circuit on a 1/2WL dipole antenna
for the 20-meter wavelength band?"

Then you are admitting, as you have previously admitted, that you were required by circumstances (at the FCC), to learn Morse code. "Required by circumstances" is the dictionary definition of forced.

> ... it was at that time that I realized that nobody was
> "forcing" me to take the Morse code tests.

It was at that time that you figured out how to rationalize the requirements. Governments create and enforce requirements. That's what governments do.

Here's a little logic exercise for you. Take a piece of paper and draw a circle. Label that circle, "the set of all US HF hams". Now how many individuals in that set were not required by circumstances to pass a Morse code exam? "Required by circumstances" is the dictionary definition of "forced". Larry, ALL US HF hams, including you, were required by circumstances to pass a Morse code exam. Only people outside the circle are not required by circumstances

```
to pass a Morse code exam.

It is irrelevant how you feel about the regulations. The truth is
that you, as a licensed amateur radio operator are forced to
obey the regulations. If you don't believe that, please try
contacting the foreign hams in the US CW/digital portion of
40m. See how long it is until you are forced to obey the
regulations.

> Morse code test for an amateur radio license.

Taxes are what you pay for the privilege of living in this country. Morse code tests are the "taxes" you pay for the privilege of being a US HF amateur radio operator. All US HF amateur radio operators have been required by circumstances to pass a Morse code exam. You are a US HF amateur radio operator. Therefore, you were required by circumstances to pass a Morse code exam. How you feel about being forced is irrelevant. Is this a case of relax and enjoy it and then it's not rape?

> If I choose not to do so,
> there is no negative consequence, apart from simply not being granted
> permission to do something that I could already live without doing.

There is no way a US HF amateur radio operator can choose not to take a Morse code exam. Obviously, there is no way you can change your mind and not have taken a Morse code exam.

> For there to be "force," there has to be some sort of gun to your head.

That's a false statement according to Webster's dictionary. Even your cheap dictionary says: "forced - produced with effort". You have already admitted that your Morse code skill was "produced with effort". Therefore, your Morse code skill was "forced".

So you seem to be admitting that you cannot refute my logical argument.
It doesn't matter what you feel, Larry. Your feelings are irrelevant.
What is relevant is the dictionary definition of "forced". You met that
definition of "forced" when you took your Morse code exam. I'm sorry
that facts upset you, Larry, but you getting upset and denying reality
is irrelevant.

> "A closed mind that believes in free will?"

A closed mind that believes in free will is predestined to believe
in free will and has no choice in the matter. Only an open mind that
questions the existence of predestination VS free will is actually
open.

Although I didn't listen to the net, I'll wager that none of you folks
called each other a name, said a cross word, or ran each other down
during this QSO/Net. Why was that? You folks often do one or more of
those things to each other here on rrap. Is this the gentleman's
effect of the CW mode at work??

> Hey, that was fun! Been a long time since I've participated in a CW

Actually, last night I was wondering if it's time to give up on physically being able to send CW without a keyboard. My familial tremors are getting worse. Sometimes I press down and nothing happens and sometimes I press down and two things happen.

Strangely enough, last night I realized that I had not paid enough attention to call signs on this newsgroup to recognize them on the air. When Brian said to give AC6XG a call, I thought, "Who's that?" :-)

I agree, Jim. I wish LBJ had not been a Texan. There's
a historical pocket of corruption down around Duval and
Jim Wells Counties. When LBJ went to Congress, dead
people had voted for him and lots votes were cast for
him in alphabetical order. LBJ and Clinton were out of
somewhat the same mold. Anything goes as long as they
don't get caught.

>1934. The FCC doesn't require Commissioners or FCC Staff to
>hold amateur radio licenses in order to regulate US amateur
>radio.

Which is NOT germane to ANY discussion in ANY thread vis-a-vis Amateur regulations. It is your ONLY "defense" against your putrid spewings.

>Why not listen to ham bands above 10 m? Tell us how
>much morse code you hear there.

Depends on where you listen...just like HF. There's a lot more than you'd think all the way up to 23cm. Of course, not being an active Amatuer Radio Operator yourself, nor being involved in any Amatuer programs, you wouldn't know this.

>Do you want all amateurs to become commercial operators?

Why not? You do.

>Seems a pretty clear thing to me, old-timer. It's not an
>"environmental" or "resource" thing at all...just another
>manifestation of "that's the way you had to test and therefore
>every newcomer has to test the same way."

Gratuitous name calling, Lennie? Besides THAT, there was nothing factual here.

>Rationalize all you want. Keep on insuring that US amateur
>radio turns into the "US Amateur Radiotelegraphy Service"
>to keep the 1930s alive and well in a living radio museum
>of the air. Keep that "morse resource" alive long after its

Jim:

If you have an ordinary (Class D) driver's license, you are authorized to operate vehicles up to 26,000 lbs. GVW and carrying up to 15 passengers (yourself, the driver, included in the count). To carry the 16th passenger, you would require at least a Class C CDL with passenger endorsement; to carry the 26,001 st. pound, a Class B CDL would be required. Of course, PA requirements may vary; but I think CDL's are supposed to be uniform in requirements throughout the 50 states.

And why should anyone take it seriously anyway?
There is NO score attached to anyone's license. You pass
with a perfect score and you pass with just a 75% score
and no one ever has the details as part of the license
then issued.

The rubber meets the rode in what and how each person
does with the license granted.

Cheers,
Bill K2UNK

Dead on Nebraska's

You haven't lived until you follow Methusala's nephew down the road as he bops along in a moose Winnebago on his Class D. I would mention coke-bottle glasses but all that means is that he is one who got his cataracts fixed.

That's the way it is for those of us who have passed all of the tests, Mr. Sohl.
The FCC doesn't expect folks who don't know the code to use the code. Do you?

Who was it that recorded the song Mr. Soul. Was it the Byrds? ;-)

So have I. But your arguments never make any such distinction.

No games. I'm setting up in a temporary QTH at the moment with a
weenie TS-50 ssb mobile rig but it kicks out 100w and the antenna is
decent. I worked eastern Siberia on 7.012 last nite, Texas should be a
pizza cake. Caveat on my end is S8 electrical noise which comes for
hours and stays for hours before it peters out. I can usually copy
thru it, though. Despite the barn-door ssb flter and the #@!**^! AGC.

Neither do they prohibit it since nocode techs are allowed to use
the only CW-only frequencies in ham radio.

Peter,

Are you free to type? Are your kidnappers out of the room? How often do they have a gun to your head forcing you to read and reply to Charles Johnston's messages? It must be awful. It makes me cherish my freedom even more knowing I can killfile or just plain ignore a poster. I feel sorry for you comrade. I have watched you for a long time forced to read and comment on so many of Charles Johnston's messages. It must be hell for you. Be strong!

Glenn

Just to be safe, is that 10:15pm - 10:30pm EST on Tuesday?

>>Do you have any quotes from any FCC that proves this?
>
>Their actions speak louder than any words could.

Very true, but I do remember several Notices over the years that dealt with the desire of the FCC to persuade violators whose only crime was lack of license to "straighten up and fly right" and get licensed.

The analogy was always made to someone who drives a car without a license. We always lived in fear of some judge remarking to a "pirate" whom we would catch and finally drag into court: "OK, you operated a radio transmitter without a required license. I sentence you to obey the law and get a license...."

Fortunately it never happened - the judges were more "with the program" than most of the big-city Federal prosecutors of that era.

We did have one case where a "big bad CBer" that we caught saw the light and studied and took the test for his ham license. His application came up for hearing before issuance, and he claimed (rightfully) that since the time he was caught he didn't commit any more violations. He got a one-year probationary period on his license, and he turned out to be one of the most responsible hams in the community.

The door can swing two ways.

In article <3A99FD33.3212191B@ovis.net>, Dave Heil <k8mn@ovis.net> writes:

>I've already accepted that and I've been living with it. I'm still
>looking for the explosion in growth. According to some, many of the
>newcomers will be professionals who will dazzle us with technological
>advances. I'm waiting for that too.

The "explosion in growth" already happened, but some are deaf to plosive conditions. US amateur radio licensees are now a third of all US amateur licensees, exclusive of the Tech-Plus "transfers." To have the total licensees grow by 50 percent in only 11 years sounds like growth to anyone reasonable.

Who insisted that there "must" be an explosion in growth? Seems like that was the PCTAs who were looking for any excuse to denigrate anyone not taking a code test. Such denigration was common in this newsgroup about the FCC 98-143 NPRM. It is still continuing long after the FCC 99-412 Report and Order.

It must be that no-code-test Technicians aren't "real hams" and therefore they "cannot be counted," hence there is "no" explosion in growth.

As to "professionals advancing the state of the art," there are plenty of examples in QST, QEX, even a few in 73 and CQ magazines. G3PLX's innovative PSK31 (lots of good thinking on devising that) is a shining example, but of course Peter is a Brit and probably doesn't count? It isn't about morse code so it shouldn't count?

Of course you will discount this entire message since it was written by someone not licensed in amateur radio.

>Of course.

It is difficult to converse with a god...

>>Hint: The FCC regulates US amateur radio.
>
>We KNOW, Len. Is the FCC infallible in its regulatory decisions?

To nearly every PCTA prior to 99-412 the FCC was absolutely infallible in having the three-speed morse tier tied in with the "incentive licensing plan."   :-)

>Doesn't mean they are infallible.

If the FCC requires a code exam for a license they are

"infallible" according to the PCTA premise. Is that
premise "infallible?"   :-)

>>The FCC doesn't require Commissioners or FCC Staff to
>>hold amateur radio licenses in order to regulate US amateur
>>radio.
>
>So? What's your point?

Somehow I just knew you were going to come up with "you
know what is best for [US] ham radio."   :-)

You are licensed as a US radio amateur, at the "highest"
class...ergo, "you know what is best" and no one else
with a "lower" class (and certainly not anyone not having
a US amateur radio license) can "know what is best." :-)

>>There are many in here who rationalize about all newcomers
>>having to do just like they did.
>
>Who? Not me. My point was that it's not one of MY reasons.

My apologies...but be careful what you write in the future,
such may come along to haunt you later.

>Show me where I've posted "I did it, so you must do it too" as a reason for
>keeping code tests. The only place I've seen it is in the posts of nocodetest
>folks who claim to know the motivations of others.

The "only" place?!? Look at all the "real ham" mentions...
"real hams" know/tested-for morse code. For an
extreme, see the idiotic postings that go only
"Know code = know ham   No code = no ham."

Do you need that sign illuminated to see it?

>>>Sure it does. Listen to the HF ham bands and see how much Morse you hear.
>>
>>Why not listen to ham bands above 10 m? Tell us how
>>much morse code you hear there.
>
>Morse is used far more on the HF and MF ham bands than on VHF and UHF.

Oh? Why is that?   :-)

>In the context of driver's licenses, the word does not mean "for money". To
>legally drive a motor vehicle over 10,000 pounds GVWR in PA requires a CDL,
>even if I drive it as an "amateur". But I can be paid to drive my car without

>one.

How about leaving US civil radio regulation to the FCC and
driving licensing up to the individual states? I still can't see
any similarity between the two.

>>Do you want all amateurs to become commercial operators?
>
>I want them to have the basic skills and knowledge of the amateur radio
>service.

Then the "fallible" FCC gave that power to the VECs as part of
99-412. The VEC Question Pool Committee can decide "the
basic skills and knowledge of amateur radio" through selection
of the appropriate questions. The VECs are composed of
licensed US radio amateurs. If you want to comment on that,
please address the VEC QPC, not me.

>>Seems to me that was the PCTA position before the 98-143
>>NPRM.
>
>Not me. I suggested many chnages to the FCC. You didn't even bother to file
>comments, Len - just "reply comments".

Ah, so 14 pages of text single-spaced (wrong format) was "not
bothering?" Insignificant?

There's over 2600 documents in the NPRM 98-143 public file.
Perhaps you could go through all of them and note which ones
are "significant" or "insignificant."

>>By keeping the morse code test for HF privileges, it insures
>>that SOME newcomers will know morse (your favorite mode).
>
>So? Is that a bad thing?

Yes, to newcomers. The FCC has gone on public record in
1990 and again in 1999 that it does not consider a morse
code test to be relevant to its task of determining who should
or should not get an amateur radio license. It must continue
to do so for external factors, namely ITU-R S25.5.

>>Seems a pretty clear thing to me, old-timer.
>
>Nope. You're projecting your biases onto others.

You can project your biases freely but others cannot?   :-)

>I recall that way back on January 19, 2000, you told us you were going for an
>Extra "right out of the box". Hasn't happened yet, though. Guess those new
>writtens are too tough, huh?

Heh, I don't recall that. What I recall saying is that I *MIGHT* do that. I don't recall any promise no guarantee to do that.

Since 13 months ago, I've seen no lessening of the "superior" attitude of many already-licensed individuals who depreciate, denigrate, and insult those not having amateur radio licenses. Why should any professional bother with testing for a hobby where the existing hobbyists have such a "superior" attitude?

I don't consider the US amateur radio written test elements "too tough." I have them on file, have done practice tests. The point is WHY BOTHER to seek self-glory in title, rank, status, something that far too many display to others?

Amateur radio is a hobby, not a profession, not a (non-regulatory term) service to anyone but the licensee. Amateur radio activities radiate RF, hence such activities need regulation. As part of that regulation, the regulatory agency issues licenses. The viewpoint of many who turn down amateur radio is that too many within the hobby make far more of their license than the activities...they make themselves far more than they really are...and they seem to spend an inordinate amount of time defending their position due to delusions of self-grandeur.

I have no quarrel with the "writtens" for any class of license. I've faced far, far worse "exams" in my career and "passed" all of them...including an FCC-given First Class Radiotelephone license test that so many denigrate and dismiss as "nothing" or "irrelevant."

Why should anyone enter a hobby where they are abused verbally by self-professed "experts" in amateur radio?

Then why post it?

>And how do you know what I had to do? As a matter of fact, I built my first
>SW receiver and amateur transmitter. I also built many since then, including
the
>setup I use now.

I am familiar with FCC radio operator test requirements. None

have required "bulding any equipment as test proof" for any
radio operator license in the last half century...

You are trying to equate a personal situation with something
not required in the USA. Bad equation. Bad, bad, sit in a
corner...

>I DON'T ask others to do what I haven't done.

OK. Keep that sentence in mind... :-)

>>Are you trying to make US amateur
>>radio more exclusive by excluding some newcomers?
>
>Nope. Why do you think that?

Because you mentioned an old test in a foreign country,
tried a faulty equation to justify mentioning it...

>Is building one's own radio gear a bad thing?

No. Why don't you broach the VEC QPC on making such
an amateur radio test condition? Otherwise, why post a
condition of past testing that isn't applicable today?
Especially so in a case of treason against the USA?

  In all other services where manual Morse is permitted,
  operators using that mode must hold commercial Radiotelegraph
  Operators' licenses (20 wpm text, 16 wpm code groups minimum).

  Ham radio IS different.

  The law was amended that if the info that is passed results in
  the death of someone who is exposed as a double agent, he is
  liable for the death penalty.  Apparently two such doubles were
  executed by Russia, so that liabiulity does exist in this case.

>See another treasonous son of a bitch still

  His knowledge of Morse will serve him well for the time while
  he sits in K-Block at Marion where Mister Walker is also
  confined.....they can knock-beep at each other.

As much as I'd like to take credit for it, Cecil, you were the one who first introduced me to the idea. And I agree. I had to force myself to learn code instead of watch TV or talk on the radio. Do you now disagree with the first definition you used?

So the word 'when' could be used instead of the word 'if'?

You know, you're right. They're just trying to be efficient by robbing the
bank. I saves them from having to steal a burger from Macdonald's, and then
having to steal a Pepto-Bismol from the drug store.

I think the question is irrelevant, because whether a person even wants
to get on the radio is irrelevant at test time. No one is asking what
somebody intends to do with their license. The only question being
asked is whether they meet the qualifications for licensure.

You will now state your views about the qualification requirements.

It's different in that we are licensed generally according to frequency
restrictions, rather than by mode restrictions. The license requirements
are based however on, among other things, the modes we can use.

Right. Neither the desires of the applicant, nor any third party (such
as yourself) are relevant. :-)

Well, not exactly.  We have to show quite a number of other things as
well (as I'm sure you're aware, but have conveniently forgotten.)

I think so. One of his definitions said somthing about "requires
effort". It required effort to learn code. I have to force the chair
away from my desk if I want to get up, etc, etc,.

Wouldn't this mean that taking written FCC exams is also NOT a voluntary
act, and therefore there's no difference between the Morse test and the
written test in this regard?

No, it's because the foreign QSL cards now cost so much. In order to get
a QSL card from Germany, I've got to put 80 cents worth of postage on
the envelope and 2 dollars inside. $2.80 for one QSL card. Yeah, I know
a radio costs a thousand bucks, blah blah blah. Still, 2-3 dollars for
each QSL card that I want from a DX station gets expensive. And these
days, 90% of these guys have email!

Is element 4 the Extra question pool? If so, your statement is not
entirely correct. It should read: Amateur radio users of 7.010 MHz
were required by circumstances (forced) to pass an Extra exam.

Several comments on this group of late got me thinking. Bad Mistake.

Larry notes that truck driving is more these days than bladder capacity. Jim N2EY notes that most of the interlopers he has heard are truckers (also true in the I-80 corridor where I live) at short distance from each other. Skip-shooting from fixed stations becomes an issue on several newsgripes -- which truckers could generally care less about. And I recall that there has been babble about a truckers' band virtually forever. Might it be that they are trying to get away from the rest of CB???

So perhaps it is time to give it to them and where else but below the present 40? It now being nearly 50 years since CB was invented and 30 since the Fuel Crisis and Double Nickels that started the whole cesspool, maybe we can do it right this time. The sense of isolation from driving a big rig is pretty good motivation for a lot of things and perhaps protecting their terrain is one of them. So you need to give them a fighting chance.

So here is my specs for you to shoot holes in.

20 Channels on some bizarre channel spacing. I used 12.9 kHz
FM with M1-M7 selectable but required PL. A 200 Hz buzz should keep interlopers down to a belch.
Five and 25 watt selectable.
Channel 1, M1 is a calling channel. M1 selected automatically on Channel 1.
Two timer circuits: ten-second transmit on channel 1 and a 5 minute reversion to Ch1 M1

The FM, PL, and odd spacing should allow some privacy. Having done about all that is possible technically, what can you do with regulation? It would be nice to limit sales to holders of Class A CDLs but this is really not practical. The band should be mobile only, no fixed stations of any kind including dispatchers, customers, nada. The whole idea is a truck-to-truck band, period.

As the area is basic garbage frequencies to begin with, certainly with the skip shooters, there is not a hell of a lot of risk in devoting some of it to the truckers. From an enforcement perspective, it is really the old police trick of establishing one saloon two blocks from the station to attract all the Noids to one bar. One hopes to accomplish two things: get the truckers off Channel 19 two up (28.085) or three up (28.535) and make it readily apparent that anyone on AM from about Channel 15 to 40 one down will be strangled.

I kind of like it.

OK Policy wonks, let me have it.

Dick N�BK

Of course. I think we all know that but, typically, Cecil attempts to make his points by using twisted language that doesn't mean what it really says at all.

He's not
> saying the government forces us to be ham operators.

Evidently he doesn't mean that at all, but that's sure what he has been
saying, loudly and often. And incorrectly.

We're not forced
> to pass exams ***UNLESS*** we want a ham license. Under THAT
> circumstance we have no option as to whether or not we must pass a
> test. It's a simple idea, and has virtually no implied significance.

Like so much that he has to say here.

 You'd heighten the height of the ridicuous? Have a legally licensed ham
cited for QRMing an illigal Freebander who deliberately, brazenly and
pugnaciously sets up shop inside a ham band?

 How far can we go from the 'good old days' when FCC had teeth and most
anyone who intentionally violated soon felt the bite? And when virtually
all hams supported that?

The FCC will tell you that it is impossible to interfere with unauthorized
transmissions. Call them up yourself and ask them.

How many times do I have to say this?

With regards to unauthorized signals, there is no such thing as deliberate interference. It is *impossible* to interfere with an unauthorized signal. These are the FCCs words not mine. Call up the FCC and they will tell you the same thing.

A noble proposal, Dick. But---how long do you think it'd be till the wandering jackals would chew it apart, like they have the rest of that part of the spectrum.....just because "it was there" and they "could"?

They might not be able to hurt the close-in intertruck comms much.. but you an be sure that some illegal(under your proposal) base stations would get into the act. Lots of truckers used to have base station contacts accross the country they'd talk to regularly (I haven't had exposure there for a LONG time, fortunately). I'm afraid a whole new set of "violations" and violators would result.

What puzzles me is why the truckers would choose to land within a ham band to do their thing. Don't they know that stirring up a lot of ill will among hams is much more likely to get the Feds AND the hams down on them than if they used some obscure unused frequency outside a ham band?

Dick

Hey, Phil, and Hans, I don't think this is the same FCC that Phil used
to work for and the rest of us used to know so well.

I agree the very concept of deliberate interference, regardless, seems
to be anathema. But that was then. This is now.

I would agree with you, Dick, if I believed that they even knew they were in a ham band. Those that do either don't care but more likely have simply found there ain't nothing there -- certainly the case with most of the 25-30 range. If the object of the game is to talk 2 miles in relative peace, why not. The biggest thing to overcome is Truckstop Annies and Andrews.

The way most of these rigs work, the PLL is expanded in 450 kHz increments. This is how Channel 19 (27.185) turns into 28.085 and 28.535. Six ranges, including the legal ones, seems to be the norm. Not a lot different than the people who futz their 2 meter rigs to talk to the nice lady at McDonalds. That is why I specced a weird spacing

As a practical matter, enforcement is not the answer. There is the old story of the company which was losing inventory in the toolroom at an amazing rate. So it put a man near retirement age in charge with the idea that his retirement fund got a third of any reduced shrinkage. On Monday, Big Louie came up for a tool and was handed a requisition and asked for the broken tool. Big Louie reached thru the cage and grabbed our hero by the throat making it known he did not do such things. Louie's attitude changed dramatically when he saw the .357 at his nose. Such is the difference between an owner and a user.

The odds? Probably about even among reasonable success, screwing up by the reasons you suggest, and finding a new and different way to crap in the nest. On the other hand, what the hell do you have to lose? Garbage frequencies get different pollution, BFD. Seems worth the try to me and a lot less expensive than a monumental enforcement action.

The underlying assumption here is that the motivation for interloping on ten is the desire to talk with the fellow rig-jockeys on the road in relative calmnity and dignitude. The search for the clear or private or company channel is not limited to truckers or CB, the fishing fleet is equally notorious. So give it to them, WTH.

Yes, rigs will show up in fixed locations. The idea of the mobile-only is to nix the idea of running one's fleet of garbage trucks that way. It is more likely that jitney cabs and a few other less-than-reputable operations will stake a claim before the OTR boys do. There are any number of ways it can bomb out. My hope is that the sense of ownership will prevail and being able to have it squelched with a range beyond 50 yards, a lack of screaming hetrodynes, and some hope of relative privacy will prevail.

Please stop lying about what I said, Dick. I never said the government
forces us to be ham operators. What I've said is that before citizens
are granted amateur radio privileges, they are required by circumstances
(forced) to meet the requirements for a ham license. Any ham who didn't
meet those requirements is a criminal.

Often they don't even know what frequency or band they are on. Most have no clue that it is an amateur band and have no clue as to what amateur radio is. All they know is they have a radio with all these channels and these upper channels are free and clear so they assume the can use them. Even for those few who do know it is a ham band couldn't care less that they are stirring up any ill will among the hams. The FCC isn't going to do anything about these illegal ops, at least anytime soon, the only recourse for hams is to use the frequencies and attempt cause enough interference so they go somewhere else. And in spite of what some on the group would like to have you believe, the FCC isn't going to come after any ham for transmitting on top of these morons. What the FCC needs to do is catch a few, and it wouldn't be very hard, and fine the heck out of the trucker AND the company they are driving for. If a few of the trucking companies get some heavy fines for their drivers operating illegal radios, things might change.

That some participants on this newsgroup are not capable of considering
two separate concepts is not my problem. The answer to your question
is maybe, maybe not.

Well, it's obviously physically possible to interfere with an
unauthorized transmission. Question is, is it legally possible?
Phil says it is a violation of sect. 333.

Talking to an individual at the FCC is not good enough. Where is it
officially published?

I am sure Riley will really be excited if you do that. Just how will you know it
is
me and what are you going to cry to Riley? "Here Mr. H this licensed ham is
interfering with these poor truckers operating illegally on 10 meters. Please make
him stop sending his cw on top of them, oh please Mr. H. he is violating the rules
concerning interference." But never mind about the illegal truckers I guess.
Your
going to really be busy, because I hear lots of hams everyday on 10 attempting to
interfere with the illegal bootleggers. Hope you have a lot of time and tape.

> that his retirement fund got a third of any reduced shrinkage. On Monday, Big Louie came up for a tool and was handed a requisition and asked for the broken tool. Big Louie reached thru the cage and grabbed our hero by the throat making it known he did not do such things. Louie's attitude changed dramatically when he saw the .357 at his nose. Such is the difference between an owner and a user.
>
> The odds? Probably about even among reasonable success, screwing up by the reasons you suggest, and finding a new and different way to crap in the nest. On the other hand, what the hell do you have to lose? Garbage frequencies get different pollution, BFD. Seems worth the try to me and a lot less expensive than a monumental enforcement action.
>
> The underlying assumption here is that the motivation for interloping on ten is the desire to talk with the fellow rig-jockeys on the road in relative calmnity and dignitude. The search for the clear or private or company channel is not limited to truckers or CB, the fishing fleet is equally notorious. So give it to them, WTH.
>
> Yes, rigs will show up in fixed locations. The idea of the mobile-only is to nix the idea of running one's fleet of garbage trucks that way. It is more likely that jitney cabs and a few other less-than-reputable operations will stake a claim before the OTR boys do. There are any number of ways it can bomb out. My hope is that the sense of ownership will prevail and being able to have it squelched with a range beyond 50 yards, a lack of screaming hetrodynes, and some hope of relative privacy will prevail.

You've made a pretty good case for it. Anything moving in that direction that you know of?

Dick

There you go again, talking in circles. Any ham who hasn't isn't a ham.

 Of course, you use dual concepts so that you can switch at will, making
the last answer of any respondant incorrect, in the now-switched
different rendition of 'concept'.
 You've been doing this sort of crapola for all the years I've been
reading your stuff here.

This is the main reason why I despise the freebooters who have for so long so blatantly disregarded all rule and order. They have been primarily responsible for promoting the idea that outlawry is the answer, and all too often the only working answer. They've made illegality the norm, have gotten away for much for so long that it just looks like it doean't matter any more, even on ham radio. I blame them and that attitude for most of the slippage we see on the ham bands. It's actually amazing that it isn't a lot worse than it is.

its funny because many media outlets took some very good shots of this unit
on video. one could simply measure the waveguide and resonance chamber and
easily figure out the frequency. of course, the right amount of power is
another issue, but 20 rats and an assortment of different gain dishes would
fix that problem. the $50 million? inflated salaries for the last ten
years..any good geek could do it under $10k easy.

>you didn't honor those requirements, you are a criminal.

Cecil:

How could I be a criminal if I didn't meet the requirements, Logic Boy? To make that statement, you'd have to ass-u-&-me that I would have been operating HF without the requisite license -- which I've never done! And don't look now, but neither does the vast majority of other unlicensed citizens. There are a few of your "criminals" out there, to be sure, but I'm not one of them!

>Once more, please point out the faulty logic:
>
>Axiom/definition: From Webster's: "forced - required by circumstances"

Regardless of whether or not the logic is faulty, that particular definition is not germaine to the argument.

>Premise: US HF hams were forced to pass a Morse code exam.

False premise. Try again, Logic Boy.

>Proof: US HF hams were required by circumstances (FCC regulations) to
>pass a Morse code exam.

Only if they voluntarily consent to meet this "requirement." There is absolutely nothing recognizable as "force" being applied to them.

>Conclusion: US HF hams were forced to pass a Morse code exam.

Only in your twisted, illogical mind, Cecil.

>It doesn't matter whether they felt good or bad about it, Larry.
>Their feelings were irrelevant.

That's one of the few true things you've said in the past two weeks,
Cecil. Feelings have nothing to do with it. Just the facts, Ma'am.
And the fact is, nobody was "forced" to take a Morse Code exam
to gain HF privileges. They were, indeed, required to do so, but
they met this requirement by voluntary consent, not force.

And of course, nothing was mentioned about the effects if the potential "victim" were wearing a suit made with metallic fibers. Metal reflects or shields RF, so a prepared adversary would most likely be immune to the effects.

Since you're such a stickler for definitions, look up the definition of QRM,
and tell me how it is possible to interfere with interference.

I called the FCC about this before. I was satisfied with their answer. I can't
help it if you want everything in writing.

Can't prove a negative, Cecil.

Deja is defunct. Google doesn't go back very far at the present time, and its archive is still in development. All you proved is that your search didn't turn up a certain word in the limited search time.

So the proposed bet is in limbo. Cecil cannot prove he didn't swear, Dave hasn't yet proven Cecil did swear.

Actually, Cecil has repeatedly pointed out that you can't prove a negative. So
he cannot prove he did not swear something.

We don't actually know that he did a search since he can't be taken
seriously.  My claim was never that Cecil used the actual word "swear"
at any rate.  One can make an oath without using that word.  He could
have said, "If I eat a piece of cake today, I'll kiss your *** in the
middle of Main Street!"  He could then change his mind and forget the
smooch.

I wouldn't trust Al Gore to undertake the Florida recount and then
declare himself the winner. You may not have conducted such a search.
After all, nothing you hear can be taken seriously--unless you weren't
serious about that statement either.

On the contrary, Dick, your statement that a ham isn't a ham is absolute nonsense. A ham is an individual who holds an amateur radio license. My statement is true. Any ham who didn't meet the requirements for a ham license is a criminal. If you, as you contend, weren't required by circumstances (forced) to meet those requirements then you are a criminal.

Human beings often change contexts, Dick. It is up to the listener to
comprehend the changes in context. That you are too slow to do so is
a problem you need to solve.

Why don't you just say you don't know where it's officially published?
Why the diversion? As you know, talking to one Supreme Court Justice
is not good enough. Only officially published material is binding. Why
do you think that talking to one person at the FCC (probably not even
a commissioner) is good enough?

Did you talk to a real commissioner? Did you record the conversation? Getting the verbal opinion of one Supreme Court Justice is meaningless. What makes you think an opinion by an obscure person employed by the FCC carries any weight? Why is that person's opinion any more valid than Phil's? Note, these are simple questions with no hidden meanings.

Since we all know (you've told us) that you can't be taken seriously in anything you post here, that would be a chump bet and totally pointless.

I wish I could take you seriously.

Dave K8MN

This is why you didn't see it.

> >It is not important to know power levels -- only that, for use as a weapon, they would swap anything for speed. A wider beam will require more power to get the same depth of damage in the same time frame. Thus, the beam is narrow to get more depth (and speed) from the same power.
>
> ?? I think you missed the point of the weapon. It is for crowd control, so the whole idea is to cause people pain without doing damage to them. This makes the shallow penetration depth a feature, since all the nerves are located near the surface of the skin. If you want to cause people more pain you actually want the beam to be bigger, with the power density constant, so that you heat more skin and more nerves.

If you don't provide sufficient signal density, your weapon isn't a weapon. Essentially, this thing is a point-and-shoot microwave oven. There are a number of things which can prevent it from working as intended, and the only solution is to boost the effective power. That can be done by more watts or more antenna gain. Watts are expensive. You already need an antenna system, so making this more effective is the reasonable solution.

> This is a bit beside the point, however, since they give the specifications in the article (increase skin temperature to a depth of 1/64" to 130 degrees F in under 3 seconds) and all you really do by varying the width of the beam is to vary the power density. So what power density is required to achieve that effect, and how wide a beam having that power density can you generate with a power supply that is carried in a truck?

Theoretical power is beside the point. There are several lines on the graph, including duty cycle and reliability.

> >Unless, of course, you plan to require the targets to stand absolutely still for 9 seconds, just so you can double the beamwidth and get the same results . . .
>
> If you double the beamwidth while keeping total power constant you'll reduce the power density be 4 and it will take 4 times as long to get the same effect (I think this question might be on the Technician exam),

Beamwidth is on the "cube-square" rule. What takes 3 seconds at one width will take the cube of 3 seconds (9 seconds) for the same power distribution on a bean double the width but the same power.

> so let's figure out the power density required to do it in the time they specify. If skin has the same specific heat as water then

>
>Thanks, I didn't think so myself having passed that general
>test as a teenager (1958-9) with a good memory.

All sorts of people passed both the old and new tests. I passed the 1968

General and Advanced at the age of 14 and the 1970 Extra at 16. I was surprised
at how easy they were.

>Didn't know why things
>were what they were, but had no problem memorizing
>enough to pass.

Much of ANY ham exam is memorization - the band edges, for example. Much of
what is on the tests, then as now, is regulatory stuff like that.
>

>
>So you are validating the dis-satisfaction that generals
>of the 60s had when they lost privaleges.

All of the Generals and Advanceds that I knew who were ticked off by the loss
of privileges thought they had "earned the right" to all privileges, and did
not want to have to take another test to retain them. The FCC disagreed.

>You note
>that they (the pre-incentive generals) took a tougher
>test than Extras do now.

In my opinion, the old General test required morebasic radio knowledge than
today's Extra does. Just my opinion. But ham radio, radio technology in
general, and the test process were VERY different back then.
>
>>There was still a 2 year waiting period to even take the Extra test. For a

>amazingly were indeed on the test in sometimes, exact
>format.

But you did not KNOW ahead of time that the questions and answers would be so
similar. Today, a prospective ham knows that the exact Q&A in the study guide
will be on the test.

The ARRL LM study guides were just reprints of the official FCC study guides. I
always thought it was odd that the study guides were in essay format while the
actual tests were multiple choice. The reason is now obvious: it added the step
of translation to the testing process.
>

>
>Absolutely agree.

One can even imagine that the old difficulty of access could be challenged in
court. After all, the amateur license is not a commercial license, and the FCC
had a long history of mail order license testing. A prospective ham who lived
174 miles "air line" from the nearest FCC quarterly exam point might have to
travel a lot more than 174 actual miles to get there. For school kids like me,
getting out of school for an FCC exam was out of the question, so the
opportunities to take the test were severly limited - only sessions in the
summer or Christmas break were possible, and Christmas sometimes fell on exam
day.
>

>to be viewed by industry as technically competent.

EXACTLY! Excellent point!!!

I think they DID see it in the early '60s, and that is what drove the
"incentive licensing" changes. But by the 1970s that idea began to be
abandoned.
>
>>The FCC thought as early as 1958 that the requirements for full privileges

>
>Except for 20 wpm, what changed on code tests?

FCC proposed demoting existing Advanceds to General, then creating the "Amateur
First Class" license to replace it. A "First" license would have required a 16
wpm code test and a new written. ARRL and others opposed it so vigorously that
the idea was eventually dropped.

> Indeed, the
>FCC added the Advanced which only required a written test
>to upgrade to.

They reactivated the Advanced - there were about 40,000 existing Advanceds in
1967. The original 1963 ARRL proposal (made in response to an FCC inquiry) was
simple: Reopen the Advanced and require either an Advanced or Extra for full
privs. Simple and NO new code test for anybody to retain full privileges. FCC
didn't go for it.

> For years the majority of generals didn't bother.

Unless you wanted to operate 'phone, there was no reason to. For serious CW,
you needed an Extra.
>

Of course not. They aren't going to admit a thing like that in public. It may
not even be a "conscious" effort.

> That is
>only your own perspective. We obvioulsy disagree.

But you must agree that the idea is reasonable.

Don't need them. I'm not saying this idea will work! If most "freebanders" are
motivated by 1) or 2), changing the licenses tests will have no effect on them
because they WANT to be illegal.
>
>>>>Please understand, I'm not saying this was the ONLY reason for the changes

>been
>>for a long time.
>
>Yet we finally see an actual increase and commitment
>of such resources for enforcement in the last 2
>years.

The big commitment of resources is in enforcement, not license testing. And
that commitment came because of endless requests and complaints from the ARRL,
other ham groups and individuals. The R&O changes created a short-term flurry
of activity, but will result in long-term savings because the whole structure
is simplified.

One interesting side effect is the number of Novices who have renewed since
April 2000. Maybe their interest has been renewed, too.
>
>>Think about that question, though. Why would anyone operate illegally when
>so
>>much is available legally?

>
>The tech with 5 wpm has been around long enough to
>counter that argument.
>

The Tech with 5 wpm only gets you limited-power 10 meter SSB in the busiest part of the band, plus the Novice CW stuff. No 'phone or data anywhere else on HF/MF. If you don't want those limited privileges, you need at least a General. Pre-R&O General meant 3 written tests totalling 100 questions and 13 wpm code (or 5 wpm and a medical waiver). Now, a General requires just two writtens totalling 70 questions and 5 wpm code. You tell me which one is a bigger "investment" to get the same privileges.

The "price" of full privileges has been reduced even more. But remember, the FCC's idea of the appropriate requirements has wandered all over the map in the past.

The interesting thing is that pretty much anyone can build this thing --
and, if the government is claiming that it's NOT a dangerous weapon,
then if the intended victims "do unto others before they are done unto,"
there isn't a lot of room for the Feds to complain, is there?

Wouldn't you love to be in THAT courtroom?

ATTY:  "Officer, you testified that the defendant was using a Scrooch
Gun on you.  Yet we have heard testimony that the defendant had an
Amateur Radio license, and was transmitting at legal power and frequency
. . ."

Don't you believe that the government should not force radio amateurs
to do certain things? (Like dunk a basketball?)

The present argument is limited to the definition of the word "forced".
K7JEB put it wisely when he said, in effect, that governments force
citizens to obey laws and meet requirements. That's what governments do.

Translation: I know I would lose the $100 bet because Cecil never swore
that he wouldn't get an extra license.

Even if you weren't lying, there's nothing to prohibit me from changing
my mind. Have you ever said you weren't going to do something and then
changed your mind?

It might be if there were direct evidence to support it, or at least if there were not direct evidence to dispute it. Each of the changes the FCC has made to licensing requirements has been accompanied by explanations of the rationale behind the change. I'm not aware of anything the FCC has said in those documents that supports your idea. You've suggested that the FCC either didn't know that was why they were taking the actions they did or that they lied about it. Neither is "reasonable," particularly when you consider that the changes took place over a span of about 30 years, under the auspices of a number of different FCC commissioners and staff members. To accept your thesis requires accepting that all of those people have, for 30 years, been acting unconsciously, or that there has been a 30-year conspiracy to

commit misfeasance. Unless someone can adduce credible evidence to
support your thesis, I think it's just blather.

Jon

Oh, absolutely right, Dick. Certainly no one is authorized to break the
rules just to 'punish' another rule breaker. I abhor the idea that we
find that we should feel the need to "drive him off our band" but that's
about what we're left with. No proper means of dealing with that sort of
problem is in the offing.

That is plain stupid. The FCC has stated that it is not considered
interference.

>

I have spoken to FCC engineers at monitoring stations and they agree that
such is not considered interference.

Your statement has got to be in the running for the DAPOTYACAP (Dumb Assed Post Of The Year Award Certificate And Plaque)!

First, I've got better ways to spend my time than transmitted deliberate interference on top of some dump huck CBer.

Two, the dump huck CBer probably doesn't hear you anyhow.

Three, your interference masks the interlopers signal during DF efforts.

Four, deliberate interference is deliberate interference -- you're nothing more than another rules violator, no better than the dump huck CBer that you're jamming.

73, Hans, K0HB

The direct evidence is the changes in licensing procedures for the past 30
years.

> Each of the changes the
>FCC has made to licensing requirements has been accompanied by
>explanations of the rationale behind the change.

Of course. As I have stated before, there are a number of reasons for each
change that has been made. For example, the change from FCC-run tests to VECs
wasn't just to save the FCC some money. It also made the test procedure much
more accessible to prospective hams.

> I'm not aware of

>anything the FCC has said in those documents that supports your idea.

Neither am I. But the pattern of changes is still there. Can you name any changes since 1971 that have made licenses harder to get?

>You've suggested that the FCC either didn't know that was why they were
>taking the actions they did or that they lied about it.

No, I did not say they lied. I don't think they lied, either. Not putting every possible reason for something in their report is not lying, in my book.

And government agencies, in general, use language that can support a variety of ideas and interpretations.

> Neither is
>"reasonable," particularly when you consider that the changes took place
>over a span of about 30 years, under the auspices of a number of
>different FCC commissioners and staff members. To accept your thesis
>requires accepting that all of those people have, for 30 years, been
>acting unconsciously, or that there has been a 30-year conspiracy to
>commit misfeasance.

I don't think they were conspiring or commiting misfeasance.

> Unless someone can adduce credible evidence to
>support your thesis, I think it's just blather.

Your opinion noted. Mine's different.

Consider this analogy:

Back in the '70s the Feds imposed a national speed limit of 55 mph. (As I understand it, they made compliance by the states "voluntary", but a state that didn't comply lost Federal highway funds in a big way). This change was reportedly done to save fuel and to encourage alternate means of transportation. It also was credited with reducing pollution and saving tens of thousands of lives.

Enforcing this limit was tough, because many people felt it was their "right" to go faster. "I can't drive 55" was a popular phrase....;-)

Once the fuel shortages of the '70s ended and the price of fuel stabilized, pressure to raise the speed limits increased. So did wholesale violations - in fact, one excuse used by many speeders was "If I go 55 I'll get rear-ended!!!"

Many drivers felt that the 55 mph rule was overly restrictive. Respect for speed limits of ALL types decreased among some drivers.

So a few years ago the rules were changed, and now we have higher speed limits on many roads. Did the regulatory agencies say "55 was a mistake" or "we know that nobody is obeying the speed limit on many roads, so we're changing the

law"? I doubt it. Can we say that the wholesale violation of the 55 speed limit
on many roads had no effect whatsoever on the regulatory agencies' decision?
You tell me.

Wrong! the FCC doesn't consider it interference since the dump huck cb is illegal,
so if I transmit on the same frequency I am not violating any rules.

  What was said was that the  operator of said unlicensed
  communication has no protection against harmful interference
  from a station operating within the terms of its license.

  That doesn't put teflon coating on an "interferer" who is doing
  so willfully.

  There was a lot  of misunderstanding on that....which was
  cleared up with the individual.  We discussed this a while
  back, IIRC.

Just because a change may have had a certain effect (which is arguable
in the first place) does not imply that the effect was intended. The law
of unintended consequences is called a "law" because unintended
consequences are common. Direct evidence of the FCC's motives cannot be
gleaned from the effects. It can only come from those who knew the
motives.

But was the intent of the change to minimize illegal operation?

> > I'm not aware of
> >anything the FCC has said in those documents that supports your idea.
>
> Neither am I. But the pattern of changes is still there. Can you name any
> changes since 1971 that have made licenses harder to get?

Irrelevant. I don't question that fewer impediments to getting a license exist than in 1971. I do question your assertion that the changes were made in order to convert illegal operation to legal operation. But I'm willing to believe it if the evidence is forthcoming.

> No, I did not say they lied. I don't think they lied, either. Not putting every
> possible reason for something in their report is not lying, in my book.

I don't want to quibble about definitions. Can we agree that your claim is that the FCC either did not know (!) or did not tell a substantial part of the truth about their reasons for taking the actions they did?

> And government agencies, in general, use language that can support a variety of
> ideas and interpretations.

No more so than rrap posters. :-) But if you know of language from the FCC that can support the interpretation that they were making changes to amateur licensing in order to reduce illegal operation, I'd be interested to know of it.

> I don't think they were conspiring or commiting misfeasance.

Again, let's set the definitions aside. Do you think they have withheld substantive information about their intent?

> Consider this analogy:

Analogies are irrelevant. If you're going to claim that someone's -- or some agency's -- motives are different from what they state them to be, I think you have a moral obligation to support your accusation with something more substantial than analogies.

> So a few years ago the rules were changed, and now we have higher speed limits

They did in Connecticut. The legislature said, in essence, that Nutmeggers had voted with their accelerator pedals so may as well acknowledge the fact and raise the limit.

Jon

Hans, don't you know that Mister JR knows more about this
subject than FCC enforcement professionals do?

Better yet, let a third party point it out, or more
realistically, the FCC observes it while in the process of
investigating the illegal operation, and guess who the
mousetrap springs on...two for one is not a bad deal.

Hey there Dick,

Once again, you seem to be the grand prize winner! You took an innocent question presented for no other reason other than curiosity and despite a request for civility, you found it necessary to interject with a sarcastic quip.

Dick, what could've possibly happenned in your life to make it impossible to respond to people in a nice manner. I've read a great deal of really informative information here, much of it presented by some that I don't necessarily agree with...but they posted with good intent. I've just about never see you agree with anybody unless they've joined you in attacking somebody else whose views differ from your own.

>Could it be that he is trying to make us believe it's what he actually
>uses?

Gee whiz Dick, I thought I answered this adequately when I responded to Richard. The issue is not about whether or not I wan't you to believe that this is actually my gear. It's about why you feel it necessary to question my honesty or attack my integrity. Didn't mum ever teach you that "If you don't have anything nice to say..." You know the rest, don't you?...don't you?! I'd understand if you were part of the "me" generation, but The Amazing Kreskin senses that this is not the case. Is it because I'm "just" an 11 meter op, would you fell better if I listed my call? I don't think so since you seem to attack everybody...even your contemporaries.

Anyway Dick, you take care now and I hope whatever is eating at you subsides. There's much fun to be had if the bag of anger is checked at the door. By the way Glenn Miller played, those that made the hit parraaaaade; Guys like us, wehad it made...those were the days. "Ya dun good, Edit!" 73.

Bert

P.S. Dis I mention the Bencher LPF. Oh, I forgot...you probably wouldn't believ that an 1 meter operator would use one of those. Take care, Dick.

Neither the word 'yes' nor the word 'no' are to be found anywhere in
there. Is your answer yes?

Sorry Dick, but this is an urban legend, right up there with the
"Good luck, Mr. Gorsky" statement during Neil Armstrong's Apollo
11 EVA.

Good luck on this one now!

If my present argument is limited to a definition, then it is without
commentary as to merit. It is limited to quoting the dictionary.

So do you agree that the reason you might be meeting some of this resistance to the idea that the government forces people to take code tests is that you've argued in the past that the government _shouldn't_ force people to take code tests?

I'm just curious about that.

And a predictable consequence doesn't have to be stated to be involved in the planning. It can be realized to be a likely beneficial consequence and never be noted in the stated reasons for regulation changes. I, too, believe that this has been the case.
If the FCC had the resources to fully deal with the illegals they would do so. Since they don't it's easy to adopt regulations which can be incentives for them to straighten up their act. Clearly easier access to ham radio licenses does just that, with no notice necessary. Notice would only be seen as a form of capitulation.

Dick

>WRONRO, Bozo.

And still champon!

>Sure you do. And the moon is made of green cheese.

Ouch! (I have violated that 250Km rule once or twice though;-p)

Dick, I've been informed that you're ret. LE. I come from a family of law enforcement, so I have a soft spot for cops...but you're my first exception. JUST KIDDING...I've actually been told that you're a good egg underneath it all. I don't necessarily agree, (yet) but I regard my source with high respect so I'll give you the benefit of the doubt.

I really do follow the rules. I won't lie and tell you it's always been that way, but it's been that way for over fifteen years now so I think the statute of limitations has passed. We all make mistakes...and then some of us grow up. I don't want to jeopardize my ticket so yes, I play by the rules. I may not agree with them all, but I follow them. Take it easy, Dick...& 73. (I mean that.)

Bert

In article <3AA3180D.29A34770@ovis.net>, Dave Heil <k8mn@ovis.net> writes:

>Yes, you made the statement. If you are now reversing yourself, that's
>fine with me. Your "distorting things again" comment bothers me. I
>haven't distorted things this time and I don't know which other occasion
>you refer to since you saw fit to add the "again" term.

You distort by accusation without evidence. You distort by taking things out of context. You've done it again above.

>That's why I recommend that anyone interested look up the archived
>material himself so no one can be accused of cutting and pasting.

Fine by me. Are you now going to play another distortion game by saying I "will accuse you in the future about cutting and pasting?!?" Interesting paranoia there.   :-)

>I don't care if the model hobbiest organization is active or not. I was
>not referring to it.

I was. And the spelling is "hobbyist."   :-)

>How do you know about who cares and how much? You tried to shift my
>disagreement with what you posted into a disagreement between me and the
>League's by-laws. It was never that.

You were manufacturing a conflict. I was not in any argument with ARRL by-laws.

>Anyone who cares to see what you actually said can check Google.
>Otherwise, you'd accuse me of doing a cut and paste job on it to make it
>look like something other than what you'd actually said.

Tsk, tsk. More accusatory "what I will do in the future" nonsense.

>I'm not obsessed, Len. There have been no distortions and untruths.
>Anyone can look up the statements you made--the most recent and the past

>League bashing.

I have spoken against the ARRL's policies and I've also praised
ARRL services. Your distortion is pulling out only those items
which suit your purpose.

>No one who isn't interested in this need review any archives. That way,
>no one gets bored or has his time wasted. The "vendetta" outcome is
>sort of like oral sex, Len. It depends one whether you're kicking off
>or receiving.

To me this is as far from sexuality subjects as it can get.
However, this newsgrouping stuff must be sexy as hell to
you... :-)

>> Yes. I've also made some positive comments. The ARRL is not
>> divine, it's policies are made by men not gods.
>
>Sort of like those FCC folks you keep bringing up...

The FCC regulates US amateur radio. The ARRL does not.

>If this has been painful for you, Len, and you're getting tired, don't
>bother to respond. I think most folks here knew that unlicensed ARRL
>members can't vote. It was only you who seemed to think this unfair.

I don't recall any "unfair" statement. Maybe you are "recalling
for me" or something like that?

Davie boy, this is NOT about ARRL membership voting
privileges. Your post is all about manufacturing some
dispute which did not happen...and you "need" some kind
of dispute to win your message points.   Tsk, tsk.

>No one can refute something which exists and can't be taken back because
>it is archived either.

Bad sentence structure. I said "no one can refute something
which wasn't said." You can't archive something that doesn't
exist.

>Wrongdoing? Did you do wrong or did you just espouse an opinion which
>almost nobody would support?

What are you trying to say there? You've managed to construct
a sort of double loaded question in one sentence.

>Is poor Len getting picked on in the manner he picks on others?

Awww...did you feel "picked" on, big davie?

I think you've been taking lessons from Jim Kehler. Too bad you
aren't as sarcastic or ascerbic as he is... :-)

>Aside from a couple of concessions by you
>that the ARRL does some good, you've blasted the League on numerous
>occasions.

"Blasted?!?" I have disagreed with the ARRL's past policy
statements. Last time I checked, it was not against any
freedom or law to disagree with a Special Interest Group.

I have agreed with their recent policy on international code
testing...as far as it went. I thought they should go farther,
but, if I said that, you would make a Big Thing about
"blasting" the League.   :-)

>> Remember, you are an example of the "highest" class license in
>> US amateur radio.
>
>This isn't the ham bands. As you are fond of pointing out, this is
>usenet. You are a representative of no license class in U.S. amateur
>radio.

I've not pointed out that this is "usenet." I've pointed out this is
the Internet...and had a public argument on that with a two-mail-
addressed, multiple-club-call individual who was once a regular.
[see? you are screwing up quoting through mistakes]

Of course you are a "representative" of the "highest" class license
in US amateur radio...on or off the radios. Whatever statement you
make on amateur radio reflects off that shining set of dented armor
you wear. :-)

Anyone interested in amateur radio but not yet licensed in that
radio activity is a potential licensee. Is that wrong? If it is
wrong, then point out why you should be an "elite" controller of
the hobby and why you have the power to push others around.

Davie, you don't "own" amateur radio any more than another
citizen. You can have 38 years or whatever "tenure" you claim
but it doesn't make your word "more correct" than anyone else.
If it makes you happy to wave your legal ham license and go
"nyah nyah, I got one and you ain't," go ahead. I'm trying to
address the subject of licensing requirements for any newcomer
but you take that soooooo personal. Tsk, tsk. Get over it.

>on many roads. Did the regulatory agencies say "55 was a mistake" or "we know
>that nobody is obeying the speed limit on many roads, so we're changing the
>law"?

Actually, that was addressed in many respects with regard
to the various federal discussions that took place. The "mistake"
in the original legislation was a failure to have the 55 National
limit end automatically when the oil embargo ended.
In hindsight, the safety nazis got the better of everyone because
to oppose 55 after the embargo ended lead to being
labeled a speed freak, anti-safety, ad nauseum...

The other strong supporter of 55 was the insurance industry which
just loved giving higher rates to people being
ticked for driving over 55 on roads designed for 70+.

> I doubt it. Can we say that the wholesale violation of the 55 speed limit
>on many roads had no effect whatsoever on the regulatory agencies' decision?

The failure of your analogy is that there is NOT any
equivalent wholesale disregard for FCC rules by the vast
body of the populace. In contrast, even those that
said they wanted to keep 55 were usually in gross violation
of 55 when they drove on the highway.

Cheers,
Bill K2UNK
also a member of National Motorists Assoc. which played
a lead roll in ending the 55 mph farce.

I agree that ham radio and general radio technology
was very different then, but how much different was
the testing? General test was already multiple choice
(except for those "draw a diagram of..." questions).

.....
>>>No Bash books, no CSCEs, no VECs or test sessions at hamfests, all test
>>>questions were secret and you had to wait 30 days minimum to retest. Because

>>amazingly were indeed on the test in sometimes, exact
>>format.
>
>But you did not KNOW ahead of time that the questions
>and answers would be so similar.

Sure we did. The testing on which those manuals was
based didn't change dramatically from month to month.
Did we know the exact questions? No, but clearly the
license manual publishers had a solid track record of
providing more than enough material in an abbreviated
form (the license manual) to enable people to use
the manual and pass the tests.

>Today, a prospective ham knows that the exact Q&A in the study guide
>will be on the test.

Yet the syllabus of those questions being used takes more
pages to print than any of the old license manuals did.

>The ARRL LM study guides were just reprints of the official FCC study guides. I
>always thought it was odd that the study guides were in essay format while the

>of translation to the testing process.

If I memorized the fact that AMPS is the unit of electrical current,
the detractors (wrong answers) make little difference. Any good
test taker knows that.

<SNIP>

Possibly so, and the reason being (IMHO) is that the
knowledge level needed to be competent by industry
was still growing...as it is today. The ironic part is that
while the complexity has increased by many orders
of magnitude, the quality and reliability have also.

Likewise the cost of production has plummeted to a point
that we can buy mid-range size (19-27") color TVs with
remotes and stereo for under $300 and VCRs for
less than $100. That puts such consumer electronics
into the "dispossable" catagory. Assuming any
consumer electronic device doesn't fail during the
warranty period, odds are it'll last 10 or more years
(I had an old 13" Sony that went 20 years, we have a
19" color set that is over 10, VCRs, etc.) Few
peple will "risk" repair costs of $40 an hour on a
consumer product they can buy brand new for
under $300. That's especially true since technology
advances offer marked improvements in
products over every few years (e.g. TVs now have

composite video inputs, stereo output/input jacks,
etc.

Several years ago I read marketing article that
stated the price point for "impulse purchase" was
about $300. That is, if something costs 300 or
less, most consumers don't consider such a purchase
as requiring considerable thought, planning, or
justification...they just buy it.

>>>The FCC thought as early as 1958 that the requirements for full privileges

>not even be a "conscious" effort.

ROTFLMAO! So if it isn' some big internal
FCC secret, then the FCC is doing it without
even knowing that is what they intended?

>> That is
>>only your own perspective. We obvioulsy disagree.
>
>But you must agree that the idea is reasonable.

I can create many scenarios that explain actions as
viewed from my perspective. In doing so, that is all
they are (i.e. personal perspectives).

>>>The basic question is this: Why operate cb illegally? Why "freeband" when
>>ham
>>>radio offers so much more? As I see it, there are only three explanations:
>>>
>>>1) To do things that ham radio does not allow legally. Examples are
>>commercial
>>>uses, jamming, music, operation without proper ID, superpower,
>>>obscenity/profanity, etc.
>>>
>>>2) To be part of a subculture that supports the activities of 1)
>>>
>>>3) To avoid the test and license requirements for a ham license.
>>>
>>>Making ham licenses easier to get won't address 1) or 2), but will affect
>>those
>>>people primarily motivated by 3).
>>
>>And I don't see any mass influx of former freebanders
>>to validate your analysis.
>
>Don't need them. I'm not saying this idea will work! If most "freebanders" are
>motivated by 1) or 2), changing the licenses tests will have no effect on them
>because they WANT to be illegal.

Which the FCC should, by now, have a clear understanding of
since the no-code tech license has been available for 13 years
and even before that, coded techs had access to 10m phone.

If 5 wpm is soooo easy and the tech license written is soooo
easy, why hasn't there been any great drop in illegal CB
activity? You'd think the FCC or anyone else could make the
determination that most illegal CBers have no desire to
become "legal" via the ham radio route.

<SNIP>

>>Yet we finally see an actual increase and commitment
>>of such resources for enforcement in the last 2
>>years.
>
>The big commitment of resources is in enforcement, not license testing.

No resource commitment is needed in license testing. The
system appears to work quite well...or do you think
otherwise?

>And
>that commitment came because of endless requests and complaints from the ARRL,
>other ham groups and individuals.

I care not why or how it came about, I am simply happ
to see the enforcement.

>The R&O changes created a short-term flurry
>of activity, but will result in long-term savings because the whole structure
>is simplified.

Savings for who? On what basis?

>One interesting side effect is the number of Novices who have renewed since
>April 2000. Maybe their interest has been renewed, too.

The novice numbers, however, are dwindling rapidly.

>>>Think about that question, though. Why would anyone operate illegally when
>>>so much is available legally?
>>
>>The tech with 5 wpm has been around long enough to
>>counter that argument.
>>
>The Tech with 5 wpm only gets you limited-power 10 meter SSB in the busiest
>part of the band, plus the Novice CW stuff.

Yet that limited power is way above legal CB limits.
As to the "busiest" part of the band, so what, it still is
rarely wall-to-wall (28.3 to 28.5) filled with phone
signals.

>No 'phone or data anywhere else on
>HF/MF. If you don't want those limited privileges, you need at least a General.

But you were talking about those pirate and bootleg CBers
who operate 11m...are you now addressing some
unknown pirate operations in the lower HF segments?

>Pre-R&O General meant 3 written tests totalling 100 questions and 13 wpm code
>(or 5 wpm and a medical waiver). Now, a General requires just two writtens
>totalling 70 questions and 5 wpm code. You tell me which one is a bigger
>"investment" to get the same privileges.

If you wish to measure the "difficulty" or the need
to invest study time based on the number of
questions, then your method "appears" to suggest
the former.   If you look at the total volume of
questions which can be asked, then I would suggest
the later may be. In the end it makes no
difference. On my trip to Extra I took and passed
6 tests (Novice, Tech/General, Advanced, Extra
and both 5 wpm and 13 wpm). I care not one iota
that others can do the same thing now via only
four tests, nor that some others took 8 tests to
do it.

>The "price" of full privileges has been reduced even more. But remember, the
>FCC's idea of the appropriate requirements has wandered all over the map in the
>past.

Because the purpose of that testing has changed to reflect
both ham radio in general and the global aspects
of radio theory and individual mode usage (i.e. the
role of CW in today's world).

Cheers,
Bill K2UNK

>Subject: Bootleg Operators on 10 Meters

No need to get upset about the bootleggers - just make 28.085 MHz the national
CW rag chew and calling frequency. When the ssb stations move, move with them.

In my younger days as a HAM - when 11 meters was one of "my" bands - we thought
it was bad when the FCC turned the frequencies over to CB. One of the plus
factors turned out to be that most of the bootleggers back then switched over
to CB, and the bootleg problem went to NIL. Just like "incentive licensing",
things seem to have gone full circle.

The good news on 10M bootleggers is that find there is usually some ham
monitoring soon after a phone station pops up deep in the 10M CW section. Once
I'm sure it's not a legit DX station, I start my CW CQ-caller running, turn my
sharp filter on, and look for a QSO - as long as it may take. Usually get a
contact pretty fast, and seldom find the bootlegger on frequency by the time
the CW contact is over. Just one more reason to keep CW around. HI HI 73, AK

"Pay-to-Pay" (e-file) is not the smart way.
If only IRS were really a "service" !   AK

When we asked the FCC for an amateur radio license, we weren't offered
testing as an optional. The didn't ask us whether we'd like to take a
test before they mailed the license to us. They gave us their terms,
and it wasn't open to discussion. Given that it was our intent to
obtain a license, and given that we are required by law to be qualified
to have a license, the circumstances dictate that we must pass the
appropriate examinations. That's all Cecil is saying guys. He's not
saying the government forces us to be ham operators. We're not forced
to pass exams ***UNLESS*** we want a ham license. Under THAT
circumstance we have no option as to whether or not we must pass a
test. It's a simple idea, and has virtually no implied significance.

But my question regarding your opinion has only one answer. That answer is either yes, that might be the case, or no, that isn't the case. It's apparent to me that, in the minds of some folks here, the two arguments are not divorced from one another.

>
>Then do your pitch for using one mode over another as a "sales"
>effort. It shouldn't require a test element to get those new
>converts.

In case you hadn't noticed, Bill, the whole code test issue is a dead duck. The FCC is clearly come to the conclusion that the ONLY reason for a code test is to meet the requirements of S25.5. They eliminated all but the minimum test that they think meets that treaty provision. They can't do any more reduction until the treaty changes.

The ARRL BOD decided at their January meeting to simply step aside on the treaty issue. They're not going to push for keeping S25.5 - and neither will a whole bunch of other countries. The final wake-up call was the Region 3 ITU meeting last fall, where ALL of the other national societies in attendance voted to support elimination of S25.5.

Sure, the ARRL BOD sez they will support keeping a code test without S25.5. Do

you really think the FCC will follow that recommendation for access to 'phone
and digital modes? I don't.
>
>>>which
>>>is not the purpose of the requirement.

>on other hams?

Because inability to copy means they almost certainly won't use the mode. And
for most people, learning to send is far easier than learning to receive.
>
>>>If you want to hype the narrowbandwidth value of morse
>>>over voice, that's fine,
>>
>>It's not "hype" - it's fact.

Is that a bad thing?

>If it is so
>efficient, then why are some people worried that
>it will cease to be used if there is no test requirement?

Because before it can be used effectively, some skill is required. Like manual
transmissions....
>
>>> but the FCC sure hasn't bought
>>>that argument as a justification for code testing.
>>
>>Agreed. They are into minimum requirements now.
>
>Which is ALL they should be.
>

Minimum requirements often lead to minimum performance. And the real question is - who decides what "minimum" is?

n2ey@aol.com (N2EY) wrote:
>Can we say that the wholesale violation of the 55 speed limit
>on many roads had no effect whatsoever on the regulatory agencies' decision?

The speed limits on most of the major (non-freeway) city streets in Phoenix have been set for many years by the citizens. Traffic Engineering checks the speed of motorists on a particular street over a period of weeks and then sets the speed limit at or near the average speed...

Further the state (non-freeway) speed law 28-701A is not an absolute law. It says that you can go no faster than what is reasonable and prudent. This may be above or below the posted speed limit depending on the conditions (road-weather-traffic) at the time.

We gutted our freeway 55 mph speed limit law some years back. If you were going up to 15 mph over the limit you would be cited for misusing a natural resource, not speeding. The fine was very low and there were no points given to your drivers license. But we still got our highway funds...

We are just now getting some of our outlying city freeway limits raised to 65 mph. However the downtown areas are still 55 mph. I was coming through one of those downtown areas a few days ago and keeping pace with all the traffic around me. I was going 75 mph...

Is the distintion here between that of 'throwing' and unidentified carrier, and legally calling CQ or having a legitimate QSO? It seems to me that if there were an interference issue between two truckers having a conversation and two hams having a CW QSO on the same 10 meter frequency, the interference issue would be easily resolved - in favor of the hams. Is this not true?

Otherwise I agree with your point about malicious interference.

It ain't yer ears Cecil, it's well-known fact that several of the digital modes can outperform cw with respect to weak signal performance and Pactor II is at or near the top of that list. But particularly in the case of Pactor II there are a lot of hardware dollars involved beyond just the radio. Not a show stopper but ya can buy a decent kit qrp cw xcvr for less dinero than ya hafta pop just for the Pactor modem.

A PACTOR II modem only costs 15% as much as an IC-775. :-)

You are looking at the problem from the wrong end.

It is not important to know power levels -- only that, for use as a weapon, they would swap anything for speed. A wider beam will require more power to get the same depth of damage in the same time frame. Thus, the beam is narrow to get more depth (and speed) from the same power.

Unless, of course, you plan to require the targets to stand absolutely still for 9 seconds, just so you can double the beamwidth and get the same results . . .

Still, having the cause occur after the effect is quite clever. I've seen worse patents.

You're the one who asserts that people who are not amateur radio operators are not forced (required by circumstance) to take a code test even if their circumstance is a personal whim or desire is to become a ham, so it obviously matters to you despite your protest that it doesn't. What do you have against personal whims and desires, that this particular circumstance entirely precludes one from being "forced (required by circumstance)"?

Whether it matters to me or not is irrelevant. Everyone is forced to
meet the requirements no matter how he/she feels. Happy people and
angry people alike are required by circumstances to meet the same
requirements.

I don't have anything against personal whims and desires. But when
it comes to governmental requirements, personal whims and desires
are simply irrelevant. Are you saying, "Relax and enjoy it and
then it's not rape."?

But your statement is incorrect. HF hams are NOT forced to learn and
pass a test.
All citizen applicants are required by law to pass the tests required.
Once they do that, then and only then are they HF hams.

Up till this point no govermemt has ever forced me to take any radio
test whatever. If your has, you should be be protesting to your
congresspeson.

How is it than that so many people have never heard of ham radio if they
were all forced to take tests?

Lennie:

The AMA still exists, and it is bigger than ever. With your membership
comes a subscription to their journal, _Model Aviation_. You can
also purchase it on newsstands, if you want to get a copy and
catch up on the latest that aeromodelling has to offer.

Lets not make this a political issue, or divide ourselves by trying to blame individual groups. Its not about Democrats or Republicans (the research had to have started while Clinton was in the White House, but I don't doubt Bush will love it).

Instead, this is about everybody outside of the power elite, and _ALL_ of us will have to live with this stuff in the future.

Your attributed the above to the wrong person, W4JLE. I didn't write the material you quoted - it was written by someone else in reply to something I had written earlier. And you may want to read what I wrote in reply to that (about not turning this into a political debate between the two parties).

```

Since it's stated purpose is "crowd control," I don't think that the beam on the fully functional unit will be that narrow. Since it's vehicle mounted, one could sit inside an armored vehicle, or in a concealed position, to use it.

Just for kicks, what happens if it is left on for say 2 minutes instead of the recommended 3 seconds. Do you come out looking like a cup of coffee hot from the microwave? What if you put it in a storeroom in a skyscraper, preset a timer, and just left it on?

The possibilities are endless...and a little scary.

If you'd like to read the sentence in that manner, go ahead. I don't
think it makes any sense that way, but you're the Mensa member.

Check out QST for June, 1994. Page 55, I think. True story - but the rig
described is the predecessor to what I use now. The cartoon is from the cover
of a 1951 QST.

>was not allowed reasonable privileges on HF ham bands until the 90s.
```

By the definitions set forth by the FCC, a pre-1990 "competent ham" had to pass the 13 wpm code test for what you call "reasonable privileges". Also had to pass 20 wpm for full privileges after 1968.

The FCC's definition of "competent ham" has wandered all over the map. For the past 30 years or so they have been gradually reducing the test requirements that a person has to meet to qualify as a "competent ham". For several years before that, they increased the requirements for that same definition.

How many hours a person has to spend studying something to learn it is often a reflection of poor study methods. Many of the code study methods used are very inefficient.

For a good book on the subject, see:

http://www.raes.ab.ca/book/index.html

Absolutely. Or, you could gamma-match the 30 ft tower and feed it on 80/40 meters. Probably need some radials, too.

I think they did. Why do something illegally if you can do it legally with just a small investment?

There was also the purpose of repelling illegal stations by increasing ham use of 10 meters, even during sunspot minima.

Ham activity on 10 meters used to rise and fall with the sunspot cycle. Before "Novice Enhancement", almost all hams who had 10 meter priviliges also had lots of privs on all the other ham bands, so there was no compelling reason to use 10. Novices and Techs were limited to tiny slices of a few HF bands, and were allowed only Morse on HF.   "Freebanders" or "HFers" (or whatever you want to call illegal unlicensed folks) started showing up in the 10 meter band, using modified CB gear or old ham gear. This was going on as long ago as the '70s. By filling the band up with hams, the logic went, those illegal stations would be pressured to go elsewhere.

>persist in "knowing" what they are.

No, Len. You are way off base on this whole thing.

What I wrote (above) is a logical conclusion derived from things YOU wrote.

I previously wrote:

"You simply don't like the idea that hams are not all "appliance operators"."

And you replied:

"Quite true",

Those are your EXACT words. Where's the lie? Where's the distortion?

You also wrote, in that same sentence:

"but, under FCC regulations for a long, long time, US radio amateurs can be ONLY appliance operators."

This phrase does not change the meaning of the "quite true" part.

You have agreed that you don't like the idea that all hams are not appliance operators. By basic logic, you would like it if all hams WERE appliance operators, and none of them built anything.

No lie. No distortion. Just basic logic applied to your own words.

Now maybe you didn't mean to write "quite true" in response to my statement. Maybe you like the idea of hams building their own gear. If so, why not clarify the situation?

>

>You are fabricating a false condition without knowledge of
>another, then arguing against that false condition.

No, I'm not. I'm simply analyzing what YOU wrote. Refute the analysis, if it's not correct. Clarify your statement - don't shoot the messenger.

>You are
>really arguing against yourself.

Not me. But I'm beginning to think that there is no point in responding to your posts.

>It would be better for you to
>have another account-and-handle,

That's what YOU do, Len. Since I've been reading newsgroups, you've had at least four AOL screen names: "nocwtest", "lenof21", "averyfine" and "lenover21". All that time I've just been myself. When I had a deja account I purposely chose a screen name as close to my AOL one so there would be no confusion.

You're the one who keeps changing IDs.

>then you could send
>yourself or rather yourselves messages "debating" something.
>[hopefully in private e-mail to avoid large storage space]

It's clear to me that you don't want to discuss any thing here.

>

>You have done a lot of such fabrication of false conditions

Where?

>and (in a very long post) insist on debate of single sentences.

Is that not allowed? Who made you god?

If my analysis of the quoted sentecne and your reply is not correct, then refute the analysis.

>That's a useless exercise, wastes time just to gain message
>points.

What are "message points"? I have never heard the term used by anyone other than you.

> If you think you gain points by taking so much time,
>feel free to call yourself a "victor" and give yourself a high-five.
>You've not won anything. :-)

I have no idea what that is supposed to mean.

Looks to me like you realize that I've argued you into a logical corner. Rather than refute the argument or maybe clarify one of your statements, you start the name-calling game. Doesn't work on me, Len.

You claim to see in others the very behaviors you demonstrate. The psych types call that "projection", I think. Well, have fun with it.

Tsk, tsk indeed. C'mon Lennie, fess up! It wasn't very long ago that
in an exchange with Ed Hare, you made the statement I attribute to you
after Ed suggested that you join the League.

You've said much, much more about the ARRL over the period of several
years. Your "right to comment" has been used to lambast the League on
more than one occasion. The statement you made in the exchange with Ed
Hare is archived too. Anyone who cares can check out your numerous
posts and see if your "falsehoods, lies and innuendo" charge is true.

Right. Bring up the term "AMA" in a room full of people and see how
many believe that you mean the Academy of Model Aeronautics. I suppose
that you once worked for the FBI--"Finnegan's Bottled Ink".

> >Which lies and fabrications, Len, Lennie, Len Over or whatever? You are

I know what the ARRL by-laws state, Len. I also know what YOU stated.
My disagreement is not with the League but with you.

> Davie boy, you are reaching way too far to try to develop some kind
> of "issue" here. Don't go there, it leads to nowhere.

Changing your tune? You've made some charges of "falsehoods, lies and
innuendo" in a strongly worded post. You've now soft pedalled and back
pedalled.

> >Time for you to fess up...
>
> Time for you to put away your uniform and quit acting like a Dill
> Instructor. Another in here has assumed that task, warts and
> warrants aplenty. :-)

Time for you to go easy on accusations of untruth unless you are sure
that your record on the matter is clean.

> For the record: I've written in here that the ARRL offers many
> good services for its members and also several good things
> for non-members. I've written in here that I am in difference with
> some of the ARRL policies in regards to amateur radio licensing.
> I've never written that I've "wanted to become an ARRL member."

While that's not exactly what you've written, you have made numerous
negative comments about the League. I've never said that you wrote that
you wanted to become a League member. I wrote that you said you refused
to become a League member because you would not have a vote in League
affairs.

> You might need to print that out, Davie. Maybe off-line reading

Izzat right? I think I understand you pretty well, Len. You're
currently not doing a very good job of negating your prior statements.
I've not attributed anything to you which you didn't state here.

Dennis, I commented that this is true if the income is from U.S.
sources. A non-U.S. citizen who has no income from U.S. sources is
quite free to totally ignore the IRS no matter what it says it requires.

I stated that you would need to file such a return.

Dave K8MN

You seem to be admitting that you fraudulently obtained your Extra
license. Please tell us exactly how you got an Extra class license
without being required by circumstances to pass the Extra class exam.
The government forces everyone to meet the requirements for Extra
before awarding the Extra class license. Exactly how did you get out
of meeting those requirements?

Your two sentences contradict each other, Dick. Which is it? If someone
is required by law (required by circumstances) to pass a test then they,
by definition, have been forced (required by circumstances) to pass a test.
"Required by law" is just another way of saying "required by circumstances"
and is the dictionary definition of "forced". You simply cannot have it
both ways.

Please explain to us how you became a ham without meeting the requirements.
Governmental requirements are prima facie evidence of force.

Earth to Dick! We are talking about amateur radio operators. Everyone
within amateur radio is forced to meet the amateur radio requirements.

In his case, it was a physiological problem, the kind of problem that
the waiver was designed to solve. Unfortunately, that solution came 30
years too late for him.

You're the one doing the criticizing. If you never change your
mind, then that could be the root of your problems.

writes:

>
>I don't have anything against personal whims and desires. But when
>it comes to governmental requirements, personal whims and desires
>are simply irrelevant. Are you saying, "Relax and enjoy it and
>then it's not rape."?

Cecil:

If a woman "relaxed and enjoyed" an initially unwanted sexual act
and then admitted to doing so, she would have a difficult, if not
impossible task ahead of her proving that she was raped.

After I gained the intellectual and emotional intelligence and maturity
to accept the fact that I needed to learn the Morse code in order to
be an amateur radio operator with HF privileges, I found meeting that
particular requirement to be fairly easy, enjoyable, and in the whole,
a highly satisfying experience. You, on the other hand, have gone
on for days, whinging about being "forced" to do it. Again I ask, for
you have not yet answered, what is the point of this constant, tiring,
pedantic, and boring discussion of "force" re: the Morse code testing
requirements? Is there a point at all, or are you just trying to prove,
beyond a shadow of a doubt, just how big a jerk you can be?

Hey, genius, no one FORCED nor demanded that I meet the requirements -
I did it willingly! Sorry about you!

Subject: A Friendly Question re. The 155 mi. Rule on 27MHz?
Message-ID: <20010304105555.09041.00000447@ng-mp1.news.cs.com>
Xref: supernews.google.com rec.radio.amateur.policy:16781

Hi everyone,

I have a qustion for you. It's friendly in nature so please check your judicial robes at the door, thanks. I'm posting it here because I truly believe that this group is more knowlegeable re. rules, regs, and the FCC in general.

Does any body know if the 155 mi rule has ever been enforced and what the "realistic" penalty is?

Please leave linear amplifiers, non class D type-accepted radios, export radios, modified radios, and other violation out of this picture. I mean an unmodified (except for increased SSB receive filtering) 12 watt Uniden Grant XL feeding a four element wire quad at a height of approx. 65 ft. (legally suspended in trees) fed by true ladder line via a Palstar AT1500C tuner. (what a beauty...what a brute!) The mic's a D-104 TUG-8 (modified for fuller base) and the receive audio is routed through a DSP-599zx. Thanks in advance for your replies and please, let's try to keep it nice. Thanks again.

Cecil:

In order to be "forced" to do something, one must be influenced by threat of negative consequences to do the "required" action against his free will. HF hams do NOT take Morse code exams unless they voluntarily consent to do so. Without such voluntary consent, the FCC has no way to levy this testing upon the individual; however, they will refuse to grant the license. The license is not granted unless the individual voluntarily takes and passes the tests. No "force" is applied other than the FCC's observence of its own rules and regulations, which are public law.

Again, I ask you to give up your foolish quest to prove the unprovable. Nobody is "forced" to take Morse code tests. "Required by circumstances" is obviously a very distorted and false definition of the word "forced," at least in this context.

Larry, you should know by now that Lennie has NO desire to offer ANY opinion, comment or assertion from an "informed" position.

Logic that even the fictional Mr. Spock would find too simplistic would have suggested that "Mr. I Have All The Time In The World" could have spent 5 minutes surfing the web to find out that which you already knew...but hey, then he wouldn't have had anything to make his smart alec remarks over.

Nothing like facts to ruin a LennieRant.

Nope. I'm just pointing out that the auto transmission analogy isn't perfect.
Choice of transmission doesn't have much effect on other drivers. Choice of
mode does.

>which
>is not the purpose of the requirement.

The test requirements have a variety of purposes. They vary over time, too.
What those purposes should be has long been a subject of debate.

> If someone sends
>poor code does that have a BIG effect on other hams...or

It's not "hype" - it's fact.

> but the FCC sure hasn't bought

>that argument as a justification for code testing.

Agreed. They are into minimum requirements now.

Let's take the sentence as written. We'd have to take "the man"--that
would be you, for (here comes the verb) "figuring" and what did you
figure?--"how to turn upgrading into..."--into what?--"a criticible
offense". You, Cecil, have turned something into a criticizable
offense. Yep, I criticized you for being two faced because you did
something you swore you'd never do. There's your free English lesson
for this week.

Larry, I'm no more responsible for my mother's driving than I am of your driving. She is a free individual, with a legal right to drive that vehicle. And, as long as the state issues her that license (and they are already aware of her driving record), she has a right to drive and there is not a thing I can do about it.

Now, I can talk to her, and even urge her not to drive, but that is as far as I can legally go (restraining her would be a crime).

Yes. "Working skip" sweeps are done periodically, and if there is an indication that the station might be running power, an inspection is made (or at least attempted).

Violation penalties are in the $2000 per violation range for first offense and it goes uphill from there.

>Tsk, tsk indeed. C'mon Lennie, fess up! It wasn't very long ago that

>in an exchange with Ed Hare, you made the statement I attribute to you
>after Ed suggested that you join the League.

No. Either you misunderstood or misread what was written or
you are just distorting things again.

>You've said much, much more about the ARRL over the period of several
>years. Your "right to comment" has been used to lambast the League on
>more than one occasion. The statement you made in the exchange with Ed
>Hare is archived too. Anyone who cares can check out your numerous
>posts and see if your "falsehoods, lies and innuendo" charge is true.

Anyone is free to check out archives. Archived posts can be cut
and pasted in here...to form another endless non-debate where you
"analyze" the archives to "prove" some personal obsession of yours.

Yawn.

>Right. Bring up the term "AMA" in a room full of people and see how
>many believe that you mean the Academy of Model Aeronautics.

I don't expect anyone to know about the Academy of Model
Aeronautics...except the number of model hobbyists in the USA
who are members, their families and friends. According to Larry
Roll, the (model hobbyist) AMA is still active.

I used to know a medical doctor who liked model aircraft building
and flying. He used to joke about being a member of two AMAs.
He had a sense of humor. You should try it sometime, you
might like it...

>I know what the ARRL by-laws state, Len. I also know what YOU stated.
>My disagreement is not with the League but with you.

That disagreement is quite evident. Few care about that.

You keep arguing about "what I (supposedly) wrote" but you don't
show any quotes of it, don't refer to it except in vague generalities.
If you are unable to quote it, then refer to some disinterested
third-party reference where others can go look for it...please use
definite dates, newsgroup, screen name, and other details.

>> Davie boy, you are reaching way too far to try to develop some kind
>> of "issue" here. Don't go there, it leads to nowhere.
>
>Changing your tune? You've made some charges of "falsehoods, lies and
>innuendo" in a strongly worded post. You've now soft pedalled and back
>pedalled.

No. You're becoming obsessed with proving another's Wrongdoing. You haven't really presented any case yet except some personal opinions which have been distortions and untruths.

If you wish to create a long and boring thread in the form of a kangaroo court where you want to be judge, jury, and executioner, feel free. That wastes everyone's time and is boring. Hardly anyone cares for any outcome of a personal vendetta.

>Time for you to go easy on accusations of untruth unless you are sure that your record on the matter is clean.

Quit stowing your throne in a glass house.

You are now implying badness in the past...based on nothing but some vague statements of your (very biased) opinion.

>While that's not exactly what you've written, you have made numerous negative comments about the League.

Yes. I've also made some positive comments. The ARRL is not divine, it's policies are made by men not gods.

>I've never said that you wrote that you wanted to become a League member. I wrote that you said you refused to become a League member because you would not have a vote in League affairs.

Put it away, Dave. You are getting tiresome. Unlicensed members of the ARRL do not have voting privileges. That was what I've written. I've never written "why I will not join the ARRL."

You state I've written something. You have no evidence to present in this kangaroo court of yours and yet you "challenge" me to refute something. No one can refute something that doesn't exist.

>Izzat right? I think I understand you pretty well, Len. You're currently not doing a very good job of negating your prior statements. I've not attributed anything to you which you didn't state here.

I cannot "refute" something that doesn't exist. You cannot "charge" anyone of "wrongdoing" without valid evidence. If you have evidence, show it. If not, shut the hell up and go look for others who can be pushed around by your Dill Instructor attitudes.

Remember, you are an example of the "highest" class license in US amateur radio.

>
>Is that not allowed? Who made you god?

Startling question. When did theology enter into this?

The technique of "analyzing" single sentences by taking them
out of context is done by a few who have: (1). A lot of time to
play on the screen; (2). An insistence on "being right" any which
way they can in an exchange.

That isn't any theology but just an observation of BBSs, ARPANET,
USENET, INTERNET behavior over the years as practiced by some
who have a compelling obsession to have the Last Word.   :-)

>If my analysis of the quoted sentecne and your reply is not correct, then
>refute the analysis.

When I find a "sentecne" I'll look at it and analyze it. Other than that
I believe we were talking about "sentences."

"Sentence analysis" has already been done. You don't accept it. Have
you accepted any "analysis" of your words done by anyone else?   :-)

Dick Carroll wrote:
> Hey, genius, no one FORCED nor demanded that I meet the requirements -
> *I* did it willingly! Sorry about you!

If you met the requirements, Dick, you were required by circumstances to meet them. Governments force requirements upon citizens in return for privileges granted. That's what governments do. If you were not required by circumstances to pass the ham exams then you never passed them and are therefore a criminal. So which is it, Dick? Did you meet the requirements or not?

It doesn't matter if you willingly or unwillingly met the requirments. Either way, you were required by circumstances (forced) to meet the requirements. Your fuzzy feelings about it just don't matter.

The distance rule (250 km) was necessary to make it fit the definition of Land Mobile. To my knowledge, no one has cared before or since. If you were picked out in some bungle, my guess is about a $300 forfeiture at worst given it was in the legal 40. If not, skip is the least of your worries.

Why do you feel it necessary to recite your equipment list?

Dick N�BK

Larry Roll K3LT wrote:
> In order to be "forced" to do something, one must be influenced by
> threat of negative consequences to do the "required" action against
> his free will.

That's but one definition of "forced". Another is "required by circumstances". You and Dick were certainly required by circumstances to meet the requirements for an amateur radio license. If you did not meet those requirements, then you are a criminal.

> HF hams do NOT take Morse code exams unless they voluntarily consent to do so.

How they feel about it is irrelevant. Pre-HF hams take Morse code exams
because they are required by circumstances to do so. That's the
dictionary definition of "forced", Larry.

> The license is not granted unless the
> individual voluntarily takes and passes the tests. No "force" is applied
> other than the FCC's observence of its own rules and regulations,
> which are public law.

But that is exactly the force we are discussing, Larry. The force of laws
and regulations dictate that amateur radio operators are required by
circumstances to meet the requirements. That's the dictionary definition
of "forced", Larry.

> Again, I ask you to give up your foolish quest to prove the unprovable.
> Nobody is "forced" to take Morse code tests. "Required by circumstances"
> is obviously a very distorted and false definition of the word "forced,"
> at least in this context.

Your feelings don't matter, Larry. Governments force their citizens to
obey laws and meet regulations. That's what governments do. That you
suffer from the Stockholm Syndrome is irrelevant. If you don't like
that definition of "force" take it up with Barnes & Noble/Random House.

It doesn't matter how you felt about it, Larry. If you wanted to be a ham, you were required by circumstances (forced) to meet the requirements. If you didn't honor those requirements, you are a criminal.

Once more, please point out the faulty logic:

Axiom/definition: From Webster's: "forced - required by circumstances"

Premise: US HF hams were forced to pass a Morse code exam.

Proof: US HF hams were required by circumstances (FCC regulations) to pass a Morse code exam.

Conclusion: US HF hams were forced to pass a Morse code exam.

It doesn't matter whether they felt good or bad about it, Larry.
Their feelings were irrelevant.

I spoke with monitoring engineers at two different FCC monitoring facilities and
both agreed that hams interfering with illegal cbers on the 10 meter bands was OK
by
them, that is did not constitute illegal interference on the ham's part since the
interlopers were not licensed. They are the ones at the monitoring facilities who
will be listening and making the decision, not any commissioner. It doesn't have
to
be in writing, the monitoring stations will make the call, not the commissioners.
Note, this is a simple explanation, no hidden meaning.

On one hand, a nameless anonymous whanker "JR <jr@some.net>" writes:

>Yes you can, and should, interfere with an illegal station and as far
>as the FCC is concerned you are not breaking any rules by interfering
>with these cb morons as they are not licensed. The FCC isn't going to
>do anything to a ham station that interferes with these illegal
>bootleggers, so jam them all you want.

On the other hand, Phil Kane, a communications lawyer and ex-FCC
employee says it's illegal.

Who are you guys gonna trust with your license?

Good luck on this one now!

73, de Hans, K0HB

Hey Hans, I ran some cbers off of 10 meters late yesterday. They were 'shooting
skip' so I turned the linear on and got right on top of them with some cw. Chased
them to three different frequencies before they finally gave up cussin that Morse
code and moved below 28 MHz. Did you get it taped? I certainly hope so. Riley
would
really be pleased to hear that. Be sure and tell him JR did it.

In Part 15. If the signal emitted is not coming from a licensed station,
then it has to be coming from a Part 15 device. Part 15 devices must not
cause interference with licensed operations and must accept interference
caused by licensed operations. It's just like talking over some spur
coming from the neighbor's kid's video game, even if that screws up the
kid's new high score for Super Mario Bros.

Disclaimer: I am not a Communications Attorney. I tried to play one
on TV, but no one tuned in.

If enforcing the law depends upon the individual monitoring engineers' personal opinions, that is an unhealthy situation. Where is the *official* policy?

Yep, I did the search but Jim, N2EY, says the archives are
non-functional. But "swear" is not a word I normally use.
My parents taught me never to swear. It stuck and I still
have an aversion to using the word "swear".

How can one swear without using the word "swear"? How can one take an oath without using the word "oath"? A simple statement like, "I will never touch another drop of alcohol" is not swearing or an oath. I've made that statement dozens of times and always changed my mind later after I got to feeling better.

Do you not allow your wife to ever change her mind? If not, do
you still have a wife?

Greetings,

It has been less than 2 weeks since I posted my announcement about the TrustedQSL project. When I start I only knew what I wanted to do and kind of how to do it. Things are a little more clear now. The goals of the project are fairly simple:

1. Create a digital signature SDK/system that can used by anyone with a 32 bit computer.

2. Open Source which means that anyone can have access to the source code and use it in their programs. Without cost or other restrictions, except maybe given credit where credit is due.

3. Easy for software developers to program.

4. Easy for end users and CAs (Certifying Authority)to use

5. Easy for awards sponsors to validate E-QSLs offline

6. Create a project space on www.sourceforge.net for easy access to source. This has been done.

7. Create a web site.

I now have the following programs working on Linux and Cygnus Win32 G++:

qgenkey - create a key pair for amateurs.
gencert - for CAs to sign a public key of amateurs
chkcert - validate a amateur/CA certificate.

What is left to do is to write the docs, clean up the code, port it to wintel32, create Trusted QSL formats and test it well. The current size of a cert which includes the public key is 358 bytes. The size of a signedQSL is around 1k. This means that more than a 1000 signed trusted QSL could be stored on a single floppy. I think using a different encode scheme we can get the size down to less than 300 bytes (current uses ascii hex encoding). I haven't found the source to one yet, and haven't had time to write it.

The process of using creating a TrustedQSL is:

1. qgenkey call-sign

2. Have a CA sign your public key which is the certificate. This will prove that it was you that signed the QSL

3. Then either a logging program or a free standing TrustedQSL program will create a signed QSL which with the cert. can be validated anywhere anytime.

Special servers can be set up as key servers which will store certs and revoked cert list. Natural place for this would be web sites like www.vqsl.com, www.qrz.com, www.eqsl.cc, www.qsl.net, etc.

I have set up an area on www.sourceforge.net for trustedQSL. This area will handle source code control, bug tracking, forums, release management and many other things related to this project. To find information on this project go to www.sourceforge.net and do a search on trustedQSL and it will take you to the project page.

I don't program in Microsoft C/C++ so I really need MS C++ programers to help with this project.

Actually, the ARRL went further than you state, they decided
to SUPPORT removal of S25.5. In the IARU they will now
vote YES to end S25.5.

>Sure, the ARRL BOD sez they will support keeping a code test without S25.5. Do
>you really think the FCC will follow that recommendation for access to 'phone
>and digital modes? I don't.

Nor do I. Indeed, by the time S25.5 is actually ended (2003),
the support for keeping a CW test in the US will liky have
dwindled also (IMHO).

>>>>which is not the purpose of the requirement.
>>>
>>>The test requirements have a variety of purposes. They vary over time, too.
>>>What those purposes should be has long been a subject of debate.
>>

Who cares, so what? Where in part 97 is there any
requirement as a ham to EVER use any specific mode?

>And
>for most people, learning to send is far easier than learning to receive.

That's just the justification to only test recieveing, it
doesn't justify any need for the requirement to begin with.

>>>>If you want to hype the narrowbandwidth value of morse

>
>Is that a bad thing?

Not at all. I applaud you if you take it as a challange
to do so without requiring mandatory CW testing.

>>If it is so
>>efficient, then why are some people worried that
>>it will cease to be used if there is no test requirement?
>
>Because before it can be used effectively, some skill is required. Like manual
>transmissions....

And, there seems to be a good following of manual
transmission users even though there is absolutely
no laws requiring such knowledge or preferences.
If there is NO morse test at all, would you have some
fear that "unskilled" CW users will ruin the non-phone
bands?

>>>> but the FCC sure hasn't bought
>>>>that argument as a justification for code testing.
>>>
>>>Agreed. They are into minimum requirements now.
>>
>>Which is ALL they should be.
>>
>Minimum requirements often lead to minimum performance.

Minimum requirements set a threshold. Will some people never
go beyond that? Sure, that's human nature and the
population of hams has always had such people. Likewise,
the history of ham radio abounds with many people that
go well beyond the boundary of that minimum threshold.

The problem, as I see it, is that you and many others
want EVERY ham to meet some ongoing learning
process. Frankly, that is absolutely not going to happen
nor has it likly been so since the first piece of
commercial ham gear became available. I believe
we'd be better off if we worked on "making it happen"
with newly licensed hams by being role models
ourselves rather than demanding continued testing
at higher levels beyond where we are now.

>And the real question
>is - who decides what "minimum" is?

The FCC decides. We are offered the opportunity to
influence that decision by coment.

Cheers,
Bill K2UNK

The same is true in NJ on I-287, eastern end of I-80, and others
that still retain the sham 55 limit.

I agree also. Indeed, from a practical perspective,
who would actually appear to be the interferer anyway?
Also, who would likly issue any citation based on what they
heard? Would an OO cite the hams for interfering
with the illegal trucker QSO? Would the FCC?
While this may make for great hypothetical pondering,
the reality (IMHO) is that the hams wouldn't be
cited for anything given the presence of a pirate/bootleg
signal on the same frequency.

Your mileage may vary :-)

I tend to believe this. The "practical" aspect is that the
FCC won't do anything against the hams in that scenario...
regardless of any legal technicalities. By analogy,
it's somewhat like the police looking the other way when
citizens have sometimes taken the law into their own
hands against particularly loathsome criminals.

>They are the ones at the monitoring facilities who
>will be listening and making the decision, not any commissioner. It doesn't have
to
>be in writing, the monitoring stations will make the call, not the commissioners.

It is, also, more likly the truth of what will happen
regardless of the technical legalities.

Cecil, have you never had the benefit of an individual
police officer's discretion to issue a ticket or not even
though you were absolutely quilty of some traffic infringement?

Cheers,
Bill K2UNK

I'm just wondering why you feel so strongly about this point if not for the
reason that it is somehow tied to the other. You haven't commented on your
view of the underlying importance of this force issue. IOW, what's the big
deal?

Nice try Jim, but no cigar. CB radios (bootlegging or otherwise) are not Part 15 devices.

Good luck on this one now!

Look, Cecil, I called the FCC with a question, and they gave me an answer. It's as simple as that. It's not like I had some major lawsuit that required a ruling of a supreme court justice. I asked them how I, as an licensed amateur, handle bootleggers, pirates, freebanders, (pick any other synonym) that are transmitting in the lower portion of the 10 meter band that is reserved for CW and digital transmissions. Their answer was that if they are not authorized, the FCC doesn't recognize them. He gave the example of the Russian woodpecker that was so annoying. How did amateurs handle that? I don't see any offically published FCC documents on how to handle the Russian Woodpecker. Why should bootleggers on 28.085Mhz be handled any differently on our part?

No, Cecil, these are not-so simple questions. This is another attempt on your part to start another long, drawn-out thread about what the definition of "forced" is.

If you can prove the opinion of the FCC is other than that of the conversation I had with them, (and am satisfied with) do so. I'm not doing homework assignments from you.

Sorry for all the typos in my post. There's no question that jamming the truckers with a unidentified carrier is NOT a legal activity for hams to conduct. The rules explicitly prohibit us from making such transmissions. The best idea I've heard is to try to conduct amateur communications on those frequencies in order to increase the use of that part of the band and also to discourage unlicensed people from trying to homestead.

No, I wrote that Deja is defunct and that Google (which took over from Deja)
only goes back a few months at the present time. Last time I looked, anyway.
And its search functions are still being developed.

>But "swear" is not a word I normally use.

Would you swear to that?

>My parents taught me never to swear.

Cross your heart and hope to die?

> It stuck and I still
>have an aversion to using the word "swear".

Except in this post, where you have used the word four times.

The easy way to settle this is for each of you to send $100 to me. That way you
can both claim victory because you can both say in all honesty that the other
party to the bet lost because he had to pay $100.

In fact you could swear to it.

Send all funds (no personal checks, foreign currency or perishable pastries, please) to:

Southgate Contest Fund
c/o N2EY, Grand Poobah, BIT #0001, FISTS #4360

QRZ database address is fine.

Google currently goes back to August, 2000. Cecil upgraded in May of 2000, so any promise, oath or swearing on the subject by him would have occurred before May 2000.

Seriously.

Yup, I'd PROUDLY narc on 'em both in a New York second, and *especially* the ham who damned well knows better. When the time comes that we abandon the idea of "policing our own", or "looking the other way" when a fellow ham engages in vigilante justice, that's the day that the amateur bands become uninhabitable.

>Otherwise I agree with your point about malicious interference.

Two hams attempting to have a legitimate QSO on a frequency that they are both authorized on may not be considered malicious interference to "bootleggers" occupying the frequency if the intent of the QSO isnot to annoy the bootleggers.

Throwing a carrier or calling an extensive "CQ" with no intention of establishing two-way communications is arguably malicious.

There is case law concerning when interference which appears to be authorized transmissions is considered "malicious", so determination of when interference is "malicious" is easily made from the case facts by a trained enforcement attorney.

  Section 97.101(d) of the Rules is very clear:

> (d) No amateur operator shall willfully or maliciously
> interfere with or cause interference to any radio communication
> or signal.

Notice that the text CLEARLY says "any radio communication", not "licensed communication(s)" as other rules and statutes dealing with other aspects of interference do. There is no reported case (binding interpretation) holding that unlicensed communications do not fall into this "any" category, and in the absence of such, the "plain language" interpretation of "any" holds.

If the ham conducts him/herself in violation of the rules, who do you think the mousetrap will spring on?

If whomever you spoke to at "the FCC" is not picking up on this specific wording and nuance when giving you that interpretation, have them call me. They have my number in the private telephone book under the heading of "District Director (Retired)" and "Communications Attorney (Active)".

It's so hard to get trained help nowadays.

 In my experience, Commissioners may know policy that they have
 worked and spoken on but they are not necessarily knowledgeable
 about the detailed black letter law underlying same.  And rarely
 are they aware of the nuances or processes of enforcement if it
 does not involve some national policy such as cable must-carry,
 low-power FM, or broadcast indecency.

 Do not forget that the Commissioners are appointed for their
 political policy-making posture, not for their detailed
 techanical or legal knowledge of the communications field.

 That's why they have Legal Assistants, whose job it is to go to
 the Bureau responsible for a specific matter and get the info,
 then report back to their boss.  AFAIK, no current (or recent
 past) Commissioner has an Engineering Assistant although years
 ago some of them did.

Oral information is worth less than written information,
and even if it is written, it is worthless if it is does not
agree with what the law provides.

So says the US Supreme Court in _OPM v Richmond_, where
Charlie Richmond relied on a letter that the Navy sent to him
about retirement benefits which had incorrect information in
it, Charlie relied on the information in letter, and his
retirement benefits were reduced as a result.

  Of course, this is after Doug's conviction in Federal District
  Court (upheld on appeal) on 11 counts of operating a pirate FM
  radio station without a license, and other assorted criminal
  stuff.  He was a hardball case of "FCC go **** yourself". Guess
  who won?

  What goes around comes around.

Not true at all. "Part 15" transmissions are considered to be authorized (licensed) transmissions for the purposes of the Comm Act.

Unlicensed ("pirate"/"bootleg") transmissions are not.

>>Part 15 devices must not
>cause interference with licensed operations and must accept interference

Where are there two monitoring stations with manned staff any more? (I only know of one and they don't answer questions from licensees or the general public.)

And to add more kerosene to the bonfire - even if the FCC decided that they won't enforce the rule (for whatever reason), violations of the rule are still violations, and if they want to make an example of the violator, they can.

Remember that Al Capone went to Alcatraz over less than a dollar of income tax evasion.

  Cecil, it really looks like you're losing it, fella. You can't
understand that an individual who hasn't passed the FCC testing for an
amateur license is not a ham. Only those who have passed, and been
issued that license, are hams.

Thanks very much for your reply and for the info, Phil.  Makes sense.

In follow-up, how is it possible to determine whether a ham is calling
CQ maliciously?

73, Jim AC6XG

Phil Kane wrote:
> And what will your defense be if they DO do "sum-thin" ?

I was looking for 10-10 numbers. I was trying to work DX. I wanted to
see if the band was open. I had a sched with W0NT. I was testing a new
antenna. I didn't hear any CB stations on the frequency.

If he was operating properly, I'll bet that dog won't hunt.

Your right on Bill, as far as the 'letter of the law' about interference that some on hear want to bandy about and play lawyer, it doesn't matter what the 'law' says or what any commissioner thinks, if any one at the FCC station hears any such interference it will be the engineers at the monitoring stations, or maybe Riley scanning around, and no one is going to be cited by the FCC unless these folks pursue it. I seriously doubt they are going report any hams who may be interfering with illegal stations operating on 10 meters. So the fine point of the law is moot, spout the rule all you want wannabe lawyers, when a ham interferes with an illegal cber on 10 meters and an FCC monitoring stations happens to hear, they are going to simply ignore it, period.

You can't interfere with an illegal signal period.

Earth to Dick. Your statement is true but irrelevant. We are talking about
HAMS, you know the individuals who possess amateur radio licenses?
Any ***HAM***, i.e. one who possesses an amateur radio license, who didn't
meet the requirements for an amateur radio license, is a criminal.

There are ***HAMs*** who didn't meet the amateur radio requirements. Those
guys are criminals. Are you one?

Hans,

Well, you might as well tape me, too. You see, Hollingsworth already addressed this issue in regards to the New York taxicabs that were operating on the low end of 10M. The local hams started running CW QSOs and CW practice right over the top of the illegals. Mr. H. made the comment that as long as the stations that are LICENSED to use a particular frequency do so within the terms of their license, then NO interference occurs as to the illegal stations. They have NO "rights" under these circumstances since they are not supposed to be there to begin with.

NOW. If one starts cussin' the truckers out on AM phone, playing music, or playing a tape of CQ, CQ over and over, then the ham station HAS committed a violation--not of malicious interference--but of using a mode not authorized for that portion of the band, playing music (broadcasting), or one-way transmissions with no intent of receiving an answer back. But a ham can send CQ, CQ, CQ De K4XXX right over the truckers if he wants to, but I'd be at the key doing it myself. Now I can't help it if "no one" is listening, can I?

Jerry

Just try and behave yourself on the air, JR. We don't need to create
the kind of reputation CB has by lowering ourselves to that level. Use
the frequency for communications - not for jamming.

Yes I have, Bill. I was recently caught drinking while driving
and not wearing a seat belt. The Highway Patrolman let me go
with a warning. If I had been 21 years old and/or black, he
probably would have arrested me. Selective enforcement of the law
is a bad thing even if it worked to my favor that time.

Now you got me confused, Cecil. How are you defining "ham"? My idea of
a ham is a guy who received a license because he met the amateur radio
requirements. What kind of ham are you talking about?

We have so many laws that it's hard not to break any. Selective
enforcement means that all citizens are not equal under the law.
We might as well have a Bill of Attainder. It's not an honest

situation and it seems to be getting worse. As a 63 year old
white man in Texas, I can get away with almost anything.

>Anyone is free to check out archives. Archived posts can be cut
>and pasted in here...to form another endless non-debate where you
>"analyze" the archives to "prove" some personal obsession of yours.

And if they do, they will (again) prove you a liar.

WHY do you insist on making SUCH A FOOL out of yourself, Lennie?

>I don't expect anyone to know about the Academy of Model
>Aeronautics...except the number of model hobbyists in the USA

>who are members, their families and friends. According to Larry
>Roll, the (model hobbyist) AMA is still active.

>>I know what the ARRL by-laws state, Len. I also know what YOU stated. My
disagreement is not with the League but with you.

>That disagreement is quite evident. Few care about that.

Your definition of "few" is unique.

>If you are unable to quote it, then refer to some disinterested
>third-party reference where others can go look for it...please use
>definite dates, newsgroup, screen name, and other details.

Deja (cum Google), almost eveyday you post, RRAP, Lenover21, Lenof21, AveryFine, NoCWTest.

We could cut and paste your lies all day and all night. Those that want to search it out, will.

Outside of matters technical, you have no respect here, Lennie. You have YEARS of DOCUMENTED lying in this forum. Even those who essentially agree with your positions would rather you didn't address them in public. Guilty by association, as it were.

>You haven't really presented any case yet except some personal
>opinions which have been distortions and untruths.

No, he hasn't.

>If you wish to create a long and boring thread in the form of a
>kangaroo court where you want to be judge, jury, and executioner,
>feel free. That wastes everyone's time and is boring. Hardly
>anyone cares for any outcome of a personal vendetta.

Yeah, Dave. Don't butt in on Lennie's gig.

>You are now implying badness in the past...based on nothing but
>some vague statements of your (very biased) opinion.

Judging by the comments of several others here (excluding Dave and myself), those opinions are more widely held than I am sure you'd care to admit.

> I've never written "why I will not join the ARRL."

Yes you have, and no, I am not going wading through 10,000 posts by Lennie the Liar Anderson is one of your many permeations.

>Remember, you are an example of the "highest" class license in

>US amateur radio.

And I am sure you'd LOVE for us to just step aside and allow you to continue your hate-mongering unchecked.

Sorry.

After several months of trying to teach that to the others here, I have given up on such. Perhaps you should too.

All I can say is: Too little, too late. This repeater and the majority of its usergroup has been a problem for over 10 years. The only reason why the Southern California amateur community tolerates it is because it keeps all the misfits in one place.

I hope Riley realizes that he is going to have to deal with all these misfits first. Should he order the repeater itself off (and the one on 145.460- as well), the "group" will end up trashing all the other repeaters in the area, just like they did in 1993, around the time of the Malibu fires and before they settled on harassing the 145.220- repeater sponsored by CLARA. What I'm saying is that if Riley doesn't take his enforcement steps in the correct order, he may cause more damage than good in the region.

What kind of anti American rock did you crawl out from
under ? This weapon is a NON lethal tactical weapon. I
suggest you put your sorry ass in a "peace keeping", or

"law enforcement" role that US military forces deployed on in the past - and then when a hostile crowd (a crowd including both military and civilians), is intent on decaptitating your head and carrying it around on a pole, you come back here and report how you shot and killed all the women and children brandishing knives... or would you rather hold your fire and give up your life - because you have such moral ideals.

If my men are under fire by civilians, and if I have a non lethal force option to employ, i will use it, but, given the absence of one, escalating to lethal force is the last alternative.

Any professional soldier will tell you they do not wish to harm civilians, this is the impetus for this new technology. It is an effective deterrent, publicity not withstanding.

And before you shoot your socialist mouth off, I suggest you remember the incident in the streets of Mogadishu, Somalia back in 1993. Where the body of a US Army Ranger was being dragged naked thru the streets, an angry mob, including women and children - cheering at the sight. I suggest you read the book "Black Hawk Down".

People like you would prefer my comrades and I in arms, simply ask the enemy really nicely "oh would you please not hurt us?". While they cut our throats and spit on, and burn the American flag for the anti western crowds that have not so friendly intentions for the U.S.

This technology is another tool, another option for our commanders in the field to accomplish their missions. The ultimate tactical applications, and ROE's regarding the technology would no doubt have to be worked out, but having it is better than not having it.

Agreed. But I think this concept has played a big role in the FCC's decisions
towards licensing requirements for 20-25 years
>
>>>Just what actions by the FCC support your conclusion?

>Look at the General (full HF) requirements for the 50s and 60s
>and tell us how that compares.

I would say that the General of the mid-60s, compared to the technology and
regs of its time, required at least as much as the Extra of today. Probably
more. Of course the areas covered in the exams, and the exam process, are quite
different.

I specifically chose 1971 because that was about the "high water mark" for test requirements vs. privileges granted. In 1971, the Novice had no voice privileges and was a 2 year, one-time license. Technician had no HF/MF at all - they didn't even get all of amateur VHF/UHF, yet the Tech required 5 wpm and the same written as General. The privileges of a General or Conditional were at their lowest point compared to the full privileges available to a US ham.

There was still a 2 year waiting period to even take the Extra test. For a General or higher, you had to go to an FCC exam point unless you were way out in the boonies or physically disabled (and the area that qualified as "way out in the boonies" was very limited). Novices and Techs had to take their exams by mail, using a process that took about three months from start to finish if you didn't fail anything.

No Bash books, no CSCEs, no VECs or test sessions at hamfests, all test questions were secret and you had to wait 30 days minimum to retest. Because of all the effort one had to expend just to get to a test session, most hams back then tended to overprepare for the exams.

Since about the mid '70s, the trend has all been toward making the licenses easier to get. In many ways, I think that's a good thing. For example, being able to take exams at a hamfest on a weekend sure beats having to travel long distances to an FCC office to take the same exam on a weekday.

The FCC's ideas on ham license requirements have wandered all over the map in the past 50 years. Before 1953, the license requirements for full privileges (Class A) were very tough, particularly the writtens. In 1953, Generals, Conditionals and above got all privileges in a surprise move by the FCC. But after a few years, the FCC rethought its decision and the whole process that led up to the 1968 "incentive licensing" changes came to be.

The FCC thought as early as 1958 that the requirements for full privileges (General/Conditional) were way too easy. And they were primarily concerned with the written test requirements, not the code tests. The code test stuff came later - and it was not the ARRL's idea.

The period of "Generals get it all" was actually quite short - 15 years and 9 months. It was the exception, not the rule. The people who were running the FCC back then are almost certainly all gone now. The philosophy has come almost full circle.

Ask Phil Kane - he was there.

Make no mistake - the FCC is quite clearly acting to reduce illegal operation by making legal operation easier.

The basic question is this: Why operate cb illegally? Why "freeband" when ham radio offers so much more? As I see it, there are only three explanations:

1) To do things that ham radio does not allow legally. Examples are commercial uses, jamming, music, operation without proper ID, superpower, obscenity/profanity, etc.

2) To be part of a subculture that supports the activities of 1)

3) To avoid the test and license requirements for a ham license.

Making ham licenses easier to get won't address 1) or 2), but will affect those people primarily motivated by 3).

>>Please understand, I'm not saying this was the ONLY reason for the changes -
>>just that it was one of them. And I'm not saying that these changes were all

>>thinking on the subject, and how it has changed from the heyday of
>"incentive
>>licensing" to now.
>
>As above, different people see different reasons behind
>FCC actions.

Of course. And there are almost certainly multiple reasons behind their actions. Reducing the drain on FCC resources is a BIG factor, too, and has been for a long time.

Think about that question, though. Why would anyone operate illegally when so much is available legally?

Unfortunately it's history goes back even farther. I was stationed there in '79 and it was a roaring mess then. I know for a fact that ove 10 hours of tapes were hand delivered to the FCC office in LB, to a "Polish Salute" and a "sorry...we're broke". response.

I am glad to see it's going to be under the gun.....I just hope Riley drops the hammer and drops it hard.

How do you know that? Maybe you would be willing to stand in it's beam for
```

a few minutes and test your theory?

> I suggest you put your sorry ass in a "peace keeping", or

> have such moral ideals.

A good Commander in Chief, and proper rules of engagement, will correct this problem. If the enemy is presenting an immeadiate threat to the lives of our soldiers, they should be taken out. Period. Man, women, child, black, brown, etc. makes no difference once they take up arms and try to attack our soldiers, they become the enemy.

>
> If my men are under fire by civilians, and if I have a
> non lethal force option to employ, i will use it, but,

If it were the first option, there would be a lot less incidents to start with.

>
> Any professional soldier will tell you they do not wish
> to harm civilians, this is the impetus for this new
> technology. It is an effective deterrent, publicity not
> withstanding.

When they take up arms against you, they are no longer civilians, they are the enemy.

>

Again, this would never have happened given a proper Commander and correct rules of engagement.

>

Personally, I would say to run up a few Blackhawks and test out the mini-guns. Funny thing about a riot, when you shoot a few at the front, the rest go home.

>

The only problem is that this tool is targeted for domestic use, and the military has not disclosed the whole truth about this weapons' real capabilities. Couple this device with the testing of HAARP's mass mind altering potential, and you start to wonder what these devices are really being developed for...

>Subject: Bootleg Operators on 10 Meters

<< I recently reinstalled my 10 meter rig in the car and I have been monitoring 28.085 (AM mode) while driving around. It is astounding to hear how many truckers are using this as a "company" channel. >>

In my younger days as a HAM - when 11 meters was one of "my" bands - we thought it was terrible when the FCC turned the frequencies over to CB. One of the plus factors turned out to be that most of the bootleggers back then switched over to CB, and the bootleg problem went to NIL. Just like "incentive licensing", things seem to have gone full circle.

The good news on 10M bootleggers is that find there is usually some ham monitoring soon after a phone station pops up deep in the 10M CW section. Once I'm sure it's not a legit DX station, I start my CW CQ-caller running, turn my sharp filter on, and look for a QSO - as long as it may take. Usually get a contact pretty fast, and seldom find the bootlegger on frequency by the time the CW contact is over. Just one more reason to keep CW around. HI HI 73, AK

Thanks Dick,

I really appreciate the reply. I was just curious. It just happened to come to mind and when I gave it some serious thought, I couldn't come up with even one instance.

>Why do you feel it necessary to recite your equipment list?
>

My apologies, Dick. I guess I just wanted to reinforce the fact that there's no "monkey business" going on between the mic and the antenna, so I traced it in my mind while I typed. That resulted in the list. Upon reading it now, I see that it appears silly. I didn't mean for it to seem that way, some of the items are shared with my ham gear...sorry. Thanks again.

<< Case in point. I wanted to build a ground mounted vertical. When I piped 100 watts through it, my neighbor could hear my audio. I know it is not necessarily my fault, however, I went ahead and called the cable company to check it out. >>

My 5-watt packet transmissions were getting into Warner's CH 18 (dirty movie) channel, and being amplified up the line. I was getting blamed not only for that, but every outage problem the cable company had. I called Warner about their line's "leakage" and was told that the problem was my antenna was "leaking". I tried to explain that "leaking" is what antennae are for, but I couldn't get the message through. However, the FCC did get the message through and one Saturday - with five cable managers and one technician at my front door - the one tech worker took a couple of hours to fix the leaks. Meanwhile, I had a long discussion with the supervisors about why they had better stop blaming me every time their equipment failed. That fixed things short term, and the cable switchover to fiber seems to have taken care of things long term.

No big deal. Read Phil Kane's reply for much more definitive poop. As we
used to say in my much younger days, when you hear it from Phil you are
talking to the moose.

Dick

That would be willful and malicious interference. It's in Part 97, look it up. (and yes, you can't even interfere with an illegal station...crazy, eh?) The correct thing to do is tape the QSO, record the date, time, & frequency on the label and send same to uncle Riley.

Don't shoot the messenger. I don't make the rules, I just follow them. Good luck.

That's right, anytime we are victims of our own failed foreign policy,

we will just turn up the microwave for a few minutes and everything will be all right. Just kind of look at it a Napalm that doesn't destroy property. Neat stuff huh?

I would suggest that you look at the history of modern warfare before you shoot your mouth off about the desires of the "professional soldier). Try looking at how many civilians were killed at the bombings in Germany. Try looking at the collateral damage from our effective use of nuclear weapons in modern warfare. Were any civilians killed in the bombing of Iraq? How about Bosnia? We never killed civilians in Vietnam.

What happened to the soldiers in the Blackhawk was the result of failed foreign policy and piss poor tactical planning. Cooking every person within 700 yards would have made the outcome much different.
>

>This technology is another tool, another option for our commanders in the field to accomplish their missions. The ultimate tactical applications, and ROE's regarding the technology would no doubt have to be worked out, but having it is better than not having it.

The option of cooking your enemies is another option available to the field commander. Plus, who says that is the only way that the technology can be deployed? Could a bigger one be put aboard a plane? Cook the people and keep the property.

Much better than a neutron bomb. Of course, the military never thought about that because they stay up all night worrying about hurting civilians....yeah right. Plus, do you really think that the only ones to use this technology will be the US military?

Are you that naive?

Bert, I am a tad concerned just what you are getting at so at the risk of chasing the wild goose I think a bit of history needs discussion.

There has been a lot of discussion on the CB newsgripe about why a sane FCC put a Citizens Band on 27 MHz where both E and F layer skip are common and then prohibited working it.
The short answer is that there was not a hell of a lot of choice.

Business band channels were scarce owing to the idea that the Modulation Index, the deviation divided by the maximum modulating frequency had to be at least five. This is why FM is 75 kHz deviation in a 200 kHz channel. So for voice 15 kHz was considered standard which produced 50 and 60 kHz channel spacing. This is why CB is AM by the way. If you have ever seen a 'coffin box' Motorola you know that the equipment of the vintage was large, heavy, and expensive. Another reason is that frequency tolerance after a 12 MHz crystal, about the highest primary freq available, is multiplied at least 12 times for VHF and 36 for UHF was stinko by modern standards.

To get some relief to the business people, several steps were taken including splitting commercial channels to 25-30 kHz (in in the process putting enough equipment on the market to start the 2 meter repeater caper) and starting CB as a low-cost shared business band. So there was method to the madness and to its credit, we had at the time an FCC more interested in fostering communication than preventing it -- the norm in a lot of countries. Now in a lot of ways the execution resembled the class project of a lot of summer interns. To this day, I have trouble believing the call sign fiasco when CB began.

The state of the art was such that the UHF Class A CB was not reachable for many people. You have to remember that the cascode 6BQ7 dual triode was the front-end tube at the time. It had only been 10-15 years since the tuner of a 1949 TV set would have been top secret. Judge ye not by 21st Century standards.

Early TV sets had their video intermediate frequency at 25.75 (now 45.75) so operation at that frequency took cast iron cajones. Hence the 5 watt power limit.

It was a noble experiment which time has passed by. It almost worked. The current FCC approach of denial in general and denial of paternity in particular is not heartening but they have nothing to apologize for in the history.

Transistors, of course, made it a natural mobile. Then comes the fuel crisis and C.W. McCall (my sister went to school with him) and Convoy and all hell breaks loose. If we start to see the threatened 36 volt, actually 42 volt, systems from the car folks, the FET module will make the building of line-e-ars trivial although perhaps cleaner.

There are a number of sub-groups in CB and sorting out how to best serve them is a monumental bitch; there are some you couldn't serve with anything smaller than 9mm. The cry for separate trucking freqs has been around since the 70s and the conventional wisdom (don't ask me to prove it) is that the 220-221 assignment was for UPS to do just that. They have not ever used it that I know of. I have long advocated giving them a band which I will cover here if anyone gives a damn. I suspect getting them into a specially-designed FM band right below CB would make a major dent in 10 meter encroachment. That awaits another missive.

You seem to be of the hobbyist group and that's fine. Shooting skip is a fairly common passtime among VHF dispatchers when the tropo is in so welcome to the human race. Some foreign countries do not make getting an Amateur ticket nearly so attractive as the US does so there is a lot of skip to shoot among people who have chosen to do so outside the law. No sermons here.

But it appears you want this practice legalized or decriminalized and here is where you enter the jungle. It is effectively decriminalized now so

doing it in the manner the Dutch handle pot would not be a major step.
Stay off AM and I sure as hell wouldn't bother you.

One of the ways you handle regulatory organizations is to do their work for them but at the very least don't ask them to fall on their swords for you. Legalization of skip shooting has two problems (at least):

1. It is hardly in the spirit of Land Mobile operation and that is what CB is. It is for plumbers and garbage trucks, not hobbyists, at least from the ITU perspective.

2. The world already has a hobby service, Amateur Radio. Selling another one is like selling a second navel, one is decorative but two is a bit redundant.

Given the history of the use of radio in military or political affairs, it would not be too surprising if the US was getting a bit of international heat over everything from smuggling, drug running, financing of terrorists etc. in this range of frequencies while hiding under calls to San Glockenspiel.

I am afraid, Bert, that selling any idea to legalize skip shooting will be one hard sell.

Then do your pitch for using one mode over another as a "sales"
effort. It shouldn't require a test element to get those new
converts.

>>which
>>is not the purpose of the requirement.
>
>The test requirements have a variety of purposes. They vary over time, too.
>What those purposes should be has long been a subject of debate.

Tests should only have requirements which can
rationally be defended. The code test no longer
meets that standard.

>> If someone sends
>>poor code does that have a BIG effect on other hams...or
>>only an effect on the other person trying to copy code.
>
>Sending isn't tested today....

Bingo! So why does how well someone can copy

code have anything to do with having a big effect
on other hams?

>>If you want to hype the narrowbandwidth value of morse
>>over voice, that's fine,
>
>It's not "hype" - it's fact.

Hype, advertise, spin, whatever...it is all about
convincing others to use the mode. If it is so
efficient, then why are some people worried that
it will cease to be used if there is no test requirement?

>> but the FCC sure hasn't bought
>>that argument as a justification for code testing.
>
>Agreed. They are into minimum requirements now.

Which is ALL they should be.

Did you swear not to have cake for lunch? Maybe it was your inability
to excercise self control. The posting is available in archives for
anyone who cares to check it out. Apparently you, like Len, have
written so many things that you're starting to forget which position
you've taken when.

Thanks, I didn't think so myself having passed that general

test as a teenager (1958-9) with a good memory.
Didn't know why things
were what they were, but had no problem memorizing
enough to pass.

>I specifically chose 1971 because that was about the "high water mark" for test
>requirements vs. privileges granted. In 1971, the Novice had no voice

>their lowest point compared to the full privileges available to a US ham.

So you are validating the dis-satisfaction that generals
of the 60s had when they lost privaleges. You note
that they (the pre-incentive generals) took a tougher
test than Extras do now.

>There was still a 2 year waiting period to even take the Extra test. For a
>General or higher, you had to go to an FCC exam point unless you were way out

>then tended to overprepare for the exams.

ARRL license manuals, AMECO study guides, and others
gave the same info, often with "sample" test questions that
amazingly were indeed on the test in sometimes, exact
format.

>Since about the mid '70s, the trend has all been toward making the licenses
>easier to get. In many ways, I think that's a good thing. For example, being

Absolutely agree.

>The FCC's ideas on ham license requirements have wandered all over the map in
>the past 50 years. Before 1953, the license requirements for full privileges
>(Class A) were very tough, particularly the writtens. In 1953, Generals,
>Conditionals and above got all privileges in a surprise move by the FCC. But
>after a few years, the FCC rethought its decision and the whole process that
>led up to the 1968 "incentive licensing" changes came to be.

What the FCC failed to see (IMHO) in their perspective was
the ever increasing knowledge base that a person needed
to be viewed by industry as technically competent.

>The FCC thought as early as 1958 that the requirements for full privileges

>(General/Conditional) were way too easy. And they were primarily concerned with
>the written test requirements, not the code tests. The code test stuff came
>later - and it was not the ARRL's idea.

Except for 20 wpm, what changed on code tests? Indeed, the
FCC added the Advanced which only required a written test
to upgrade to. For years the majority of generals didn't bother.

>The period of "Generals get it all" was actually quite short - 15 years and 9
>months. It was the exception, not the rule. The people who were running the
>FCC back then are almost certainly all gone now. The philosophy has come almost
>full circle.
>
>Ask Phil Kane - he was there.
>
>Make no mistake - the FCC is quite clearly acting to reduce illegal operation
>by making legal operation easier.

Again, that has never been stated anywhere. That is
only your own perspective. We obvioulsy disagree.

>The basic question is this: Why operate cb illegally? Why "freeband" when ham
>radio offers so much more? As I see it, there are only three explanations:
>
>1) To do things that ham radio does not allow legally. Examples are commercial
>uses, jamming, music, operation without proper ID, superpower,

>2) To be part of a subculture that supports the activities of 1)
>
>3) To avoid the test and license requirements for a ham license.
>
>Making ham licenses easier to get won't address 1) or 2), but will affect those
>people primarily motivated by 3).

And I don't see any mass influx of former freebanders
to validate your analysis.

>>>Please understand, I'm not saying this was the ONLY reason for the changes -
>>>just that it was one of them. And I'm not saying that these changes were all
>>>bad, either. I'm just explaining my view of part of the FCC's motivation and
>>>thinking on the subject, and how it has changed from the heyday of
>>"incentive
>>>licensing" to now.
>>
>>As above, different people see different reasons behind
>>FCC actions.
>
>Of course. And there are almost certainly multiple reasons behind their
>actions. Reducing the drain on FCC resources is a BIG factor, too, and has been
>for a long time.

Yet we finally see an actual increase and commitment

of such resources for enforcement in the last 2
years.

>Think about that question, though. Why would anyone operate illegally when so
>much is available legally?

The tech with 5 wpm has been around long enough to
counter that argument.

Cheers,
Bill K2UNK

Yes you can, and should, interfere with an illegal station and as far as the FCC is concerned you are not breaking any rules by interfering with these cb morons as they are not licensed. The FCC isn't going to do anything to a ham station that interferes with these illegal bootleggers, so jam them all you want.

SSB411D wrote:

Dwight:

Using minimal force to physically restrain a person to prevent them from committing a crime is permitted under the powers of citizen's arrest. An ordinary citizen can also use deadly force to protect his own life or the life of a third party -- but he would have to deal with the natural consequences of a legal system which would closely examine the situation in the aftermath. However, the kind of "restraint" I'm talking about in your mother's case is the hiding-her-keys variety.

If your mother's poor driving truly presents a clear and present danger to herself and others, you should be able to have something done about it. At the very least, if I were you, I would not ride with her -- ever -- and discourage others from doing so.

>"realistic" penalty is?

Good Buddie:

I am not aware of the 155 mi. rule (I always thought it was 150 miles) ever being enforced. The original reason for the rule was to make sure that the Citizen's Radio Service fell within the confines of the "land mobile" definition, and to discourage "hobbyist" use of the service for routine DX chatting. CB was originally intended for short-range dispatching of small businesses (trucks at shipping terminals, mainly) and the communications were intended to be "strictly business-like." Personal (non-business) use was also allowed, as long as the transmissions remained short, to the point, fully identified, and within the rules in every respect. From the first time a trucker in Waco, Texas "worked" a colleague in Cleveland, this has to be one of the most universally ignored regulations ever placed into public law. Add to that the fact that it was dead-easy to add a "foot warmer" to a barefoot CB rig, and the ready available of high-gain antenna designs, DX on CB was was a natural outcome. I would be astonished to find out that it had ever been enforced.

Yes, you made the statement. If you are now reversing yourself, that's
fine with me. Your "distorting things again" comment bothers me. I
haven't distorted things this time and I don't know which other occasion
you refer to since you saw fit to add the "again" term.

> >You've said much, much more about the ARRL over the period of several

That's why I recommend that anyone interested look up the archived
material himself so no one can be accused of cutting and pasting.

> Yawn.

Maybe you need more sleep, Len.

I don't care if the model hobbiest organization is active or not. I was
not referring to it.

> I used to know a medical doctor who liked model aircraft building
> and flying. He used to joke about being a member of two AMAs.
> He had a sense of humor. You should try it sometime, you
> might like it...

I should join two AMAs? I'll pass.

> >I know what the ARRL by-laws state, Len. I also know what YOU stated.
> >My disagreement is not with the League but with you.
>
> That disagreement is quite evident. Few care about that.

How do you know about who cares and how much? You tried to shift my
disagreement with what you posted into a disagreement between me and the
League's by-laws. It was never that.

> You keep arguing about "what I (supposedly) wrote" but you don't

Anyone who cares to see what you actually said can check Google.
Otherwise, you'd accuse me of doing a cut and paste job on it to make it
look like something other than what you'd actually said.

> >> Davie boy, you are reaching way too far to try to develop some kind

> You haven't really presented any case yet except some personal
> opinions which have been distortions and untruths.

I'm not obsessed, Len. There have been no distortions and untruths.
Anyone can look up the statements you made--the most recent and the past
League bashing.

> If you wish to create a long and boring thread in the form of a
> kangaroo court where you want to be judge, jury, and executioner,
> feel free. That wastes everyone's time and is boring. Hardly
> anyone cares for any outcome of a personal vendetta.

No one who isn't interested in this need review any archives. That way,
no one gets bored or has his time wasted. The "vendetta" outcome is
sort of like oral sex, Len. It depends one whether you're kicking off
or receiving.

> >Time for you to go easy on accusations of untruth unless you are sure
> >that your record on the matter is clean.
>
> Quit stowing your throne in a glass house.

That line wasn't really funny when I heard it in '66 or thereabout.

> You are now implying badness in the past...based on nothing but
> some vague statements of your (very biased) opinion.

Badness? Have you been bad again, Len? It's funny that my opinion is
biased but you don't see your own opinions as biased. Don't you find
that peculiar?

> >While that's not exactly what you've written, you have made numerous
> >negative comments about the League.
>
> Yes. I've also made some positive comments. The ARRL is not
> divine, it's policies are made by men not gods.

Sort of like those FCC folks you keep bringing up...

> >I've never said that you wrote that
> >you wanted to become a League member. I wrote that you said you refused
> >to become a League member because you would not have a vote in League
> >affairs.
>
> Put it away, Dave. You are getting tiresome. Unlicensed members

> written. I've never written "why I will not join the ARRL."

If this has been painful for you, Len, and you're getting tired, don't
bother to respond. I think most folks here knew that unlicensed ARRL
members can't vote. It was only you who seemed to think this unfair.

> You state I've written something. You have no evidence to present
> in this kangaroo court of yours and yet you "challenge" me to
> refute something. No one can refute something that doesn't exist.

No one can refute something which exists and can't be taken back because
it is archived either.

> >Izzat right? I think I understand you pretty well, Len. You're

> pushed around by your Dill Instructor attitudes.

Wrongdoing? Did you do wrong or did you just espouse an opinion which
almost nobody would support? Is poor Len getting picked on in the
manner he picks on others? Aside from a couple of concessions by you
that the ARRL does some good, you've blasted the League on numerous
occasions. Folks might need to include the AveryFine, NoCWtest, LenOf21
as well as LenOver21 screen names to come up with the complete works of
Leonard H. Anderson in various archives.

> Remember, you are an example of the "highest" class license in
> US amateur radio.

This isn't the ham bands. As you are fond of pointing out, this is
usenet. You are a representative of no license class in U.S. amateur
radio.

Like hell I was! I EAGERLY took the tests and met the requiremtents!
You sound like a real mental deficient with all this nonsense. No one in
history has ever been forced by any circumstance to get a ham radio
license. Your entire argument is idiotic and everyone except you knows
it.

Thanks Dick,

No need to be concerned, there's no "sale" going on here. As far as AM goes, I
haven't transmitted on AM since...ummm, about 1986 or so to ask for traffic
conditions on ch. 10. So there'll be no "wild goose" to chase here, it was just
plain old curiosity. After twenty plus years, I don't particularly need to see
such a rule/reg. "decriminalized." It was humourous back then and, after all

these years, it's just...well, old and tired. (kinda like me:-))That's why I
added the "disclaimer" to my original post, to avoid any inaccurate
speculation. Thanks again, the info was truly interesting.

73 de Bert
SSB411D

P.S. I'll wear the "hobbyist" badge proudly, on both sides of the fence. I
just wish the fence wasn't so necessary. Take care now.

  A good historical explanation, Dick. Thanks.

>Early TV sets had their video intermediate frequency at 25.75 (now 45.75)
>so operation at that frequency took cast iron cajones.

  The early IF was 21.25 MHz, before there was a 15-meter band.
  When the latter came into use, the TV manufacturers moved the
  IF to 45 MHz. For a long time there was a horrendous TV
  interference problem because the older sets had direct pickup
  in the IF strips.

It certainly was (and still is) enforced. I had plenty of
"seat time" doing "skip sweeps" and the paperwork thereof.

It originally was 150 miles, but when the FCC's distance limits
went metric, it went to 250 KM, which rounded is 155 miles.

>I would be astonished to find out that it had ever been enforced.

It certainly was. I even nailed one guy working Italy from
California when the band had a brief opening in the 1980s. The
usual "hop" was Californa to the Mississippi Valley.

In return for granting amateur radio privileges, the federal government
requires every amateur radio operator to met the requirements for an amateur
radio license. That's what governments do, Dick. That you enjoyed being
required to meet the requirements is irrelevant. You were still required
by circumstances to meet the requirements. If you obtained your amateur
radio license without meeting the requirements, you are a criminal.

WRONRO, Bozo. The FCC has clearly stated that an illegal signal, that
has no statutory right to use a frequency cannot be interfered with by a
legal station.
Of course the universal prohibitation against interfering with
emergency communications applies, since anyone transmitting due to a
bona fide emergency is not then illegal.

I clearly remember that it was reported in the ham press a few years

ago that the FCC said, in response to a specific inquiry, that it was
not possible to interfere with a communication that was illegal.
 I also remember that the District Director for the San Diego district
was reported to have said that it was illigal for amateurs to operat
outside the ham bands under any circumstances, even in an emergency.
This statement seems clearly contrary to FCC regulatons. So it seems
clear that the right hand doesn't always know what the left is up to
within the commission.

I'm not sure there is another end.

>It is not important to know power levels -- only that, for use as a
>weapon, they would swap anything for speed. A wider beam will require
>more power to get the same depth of damage in the same time frame.
>Thus, the beam is narrow to get more depth (and speed) from the same
>power.

?? I think you missed the point of the weapon. It is for crowd control, so the whole idea is to cause people pain without doing damage to them. This makes the shallow penetration depth a feature, since all the nerves are located near the surface of the skin. If you want to cause people more pain you actually want the beam to be bigger, with the power density constant, so that you heat more skin and more nerves.

This is a bit beside the point, however, since they give the specifications in the article (increase skin temperature to a depth of 1/64" to 130 degrees F in under 3 seconds) and all you really do by varying the width of the beam is to vary the power density. So what power density is required to achieve that effect, and how wide a beam having that power density can you generate with a power supply that is carried in a truck?

>Unless, of course, you plan to require the targets to stand absolutely
>still for 9 seconds, just so you can double the beamwidth and get the
>same results . . .

If you double the beamwidth while keeping total power constant you'll reduce the power density be 4 and it will take 4 times as long to get the same effect (I think this question might be on the Technician exam), so let's figure out the power density required to do it in the time they specify. If skin has the same specific heat as water then to raise a 1/64" thick chunk of it by 30 Celsius in 2.5 seconds should require about 2 W/cm^2, or 20 kW/m^2, assuming 100% of the RF is absorbed. I've seen pictures of mobile CB linear amplifiers which produce enough output to support a beam 2 meters in diameter at this power density, so I assume the military might be able to do at least this well too. To fit this power supply in a truck assumes that masers have gotten a lot more efficient then they were 20 years ago, but lasers have gotten a lot better since then so I assume masers could have as well.

A 2 meter diameter beam just doesn't seem all that hard to aim from the comfort of an armored vehicle. Are you sure there is a problem?

Dennis Ferguson

"Richard McCollum" <rmccoll@radiks.net> wrote:
>There has been a lot of discussion on the CB newsgripe about why a sane
>FCC put a Citizens Band on 27 MHz...

From September 1958 QST:

Excerpts from FCC comments for removal of the 11 meter amateur band:

Reallocation of frequencies in the range 26.96-27.23 Mc.
The Notice of Proposed Rule Making in this proceeding recognized a need for additional spectrum space for personal use by any individual, especially those persons now holding authorizations for Class A stations in the Citizens Radio Service who will not be able to establish eligibility in any of the Industrial or Land Transportation Radio Services, as well as a substantial need for additional frequencies in the 28 Mc. range for use in the remote control of such objects or devices as model aircraft. Accordingly, it was proposed to reallocate frequencies in the band 26.96-27.23 Mc. from the Amateur Radio Service to the Citizens Radio Service for use by Class A stations for general purposes and, in addition, provide certain other frequencies, to Class C stations exclusively for the purpose of remote control. The Commission stated that this reallocation appeared appropriate because the frequencies in this band are a part of a larger frequency band within which interference may normally be

expected and must be accepted from industrial, scientific and medical (1SM) devices and because, as a result of the foregoing, only limited use of this band has been made by the amateurs. In addition, it was pointed out that amateurs, as individuals, would be able to obtain licenses in the Citizens Radio Service for either radio control or voice communication in this band.

In connection with this proposal, the Commission received a very large number of comments from both individual amateurs and modelers, as well as clubs and organizations representing persons active in each of these hobbies. In general, it may be said that all but a few comments from modelers enthusiastically supported the proposal and most of those from persons who are both amateurs and modelers also supported the reallocation. Most of the comments from other amateurs were in complete opposition to any use by the Citizens Radio Service of frequencies in this band. However, a substantial number suggested that the band be shared by the Amateur and Citizens Radio Services. A few amateurs suggested that other amateur frequencies be substituted in lieu of those proposed, or concurred in tile proposed reallocation.

Typical of the reasons set forth by the amateurs opposing deletion of the availability of frequencies in the 26.96-27.23 Mc. range to the Amateur Radio Service are:

(a) The adoption of the Commission a proposal would constitute a violation of the Atlantic City Radio Regulations to which tile United States is a signatory nation.

This band is the only one in the lower frequency ranges open to the amateurs where the Commission permits certain types of emissions and operations, and accordingly where the amateurs may engage in experimentation in facsimile, continuous carrier, and duplex operations.

(b) The characteristic which make these frequencies particularly good for long range and international communications will cause too much interference from skip, and prevent the widespread use of this band for short range communications and remote control.

(c) The recent non-use of this band by amateurs is due to cyclical "sun spots".

(d) Other amateur bands are overcrowded, the service is expanding at a rapid rate, and the 26.96-27.23 Mc. band is the only area left for expansion.

(e) The fact that an amateur might obtain a Citizens Radio Service authorization is not an adequate substitute because some amateurs could not meet the age requirement of that service, and in addition, amateurs would not be permitted to make their own adjustments to a citizens radio station.

On tile other hand, the modelers point out their dire and immediate need for additional frequencies, stating that the situation has been aggravated by recent authorizations of high-powered stations in other radio services on the frequency 27.255 Mc. for such purposes as traffic controls and remote radio paging. They further state that the use of frequencies in the 26.96-27.23 Mc. band for control of models is feasible and is similar to allocation practices found practical by other governments. The Commission is well aware of the history of the Amateur Radio Service in the development of the radio art and in providing a springboard of interest for future engineers and scientists. However, it must also be remembered that the remote control of models fosters a similar interest in young people and is a hobby in which young people are able to participate. The Commission is aware of the Amateurs outstanding record of assistance in local and national disasters. The Commission also recognizes that the Amateur Radio Service is a rapidly expanding service, but then, so is tile number of persons engaged in the remote control of models expanding at an ever increasing rate. While both amateurs and modelers suggest that spot frequencies located in different portions of the spectrum might be more desirable for remote control, such allocations are simply not possible at this time with the present scarcity of spectrum space.

In addition to filling the need for additional frequencies for remote control purposes, the proposed reallocation would also fill all urgent need for additional frequencies for voice communications by persons who will be unable to establish their eligibility in any of the Land Transportation or Industrial Radio Services, Although the Commission may have originally underestimated the use of the 26.96-27.23 Mc. band by amateurs, the use of that band is still considerably less than in other bands available to the amateurs, a fact which is admitted by many amateurs and established by monitoring observations of tile Commission. As to whether the proposed reallocation would be in violation of the Atlantic City Radio Regulations, the Commission considers that no violation is involved. The primary world-wide allocation (if that frequency band is to the Fixed and Mobile Services and the footnote permitting its use by amateurs is merely permissive. Therefore, the reallocation ordered herein and in the companion proceeding in Docket No. 11959 from the Amateur Radio Service to the Citizens Radio Service is not in violation of the Regulations.

.As stated above, the 26.96-27.23 Mr. band is a part of a larger band in which interference may normally be expected from ISM devices. Most of the reasons presented in opposition to the proposed reallocation of that band to the, Citizens Radio Service were based upon potential use of this band in tile future by the Amateur Radio Service instead of actual need or existing use of the band. Monitoring records indicate that this band is not heavily used by the Amateur Radio Service, due obviously to the interference hazard presented by the operation of ISM devices on 27.12 Ale.

The Commission feels that substantially greater use can be made of this band by the Citizens Radio Service and that the loss to the Amateur Radio Service is negligible. While it is true that certain operations have been possible in this band which were not permitted on lower frequencies available to the Amateur Radio Service, such operations are still possible on frequencies above 51 Mc. and frequencies in those ranges appear to be coming into even greater usage by the amateurs than the band here under consideration. Although the Commission realizes that, in many cases an authorization in the Citizens Radio Service may not be an adequate substitute for the Privileges lost in this band; nevertheless, the Commission finds that public interest, convenience and necessity requires the reallocation of the 26.96-27.23 Mc. band to the Citizens Radio Service for the purposes proposed. The recommendation that this band be shared by the two services involved is not adopted, since that action would be inconsistent with the Commission's position in international affairs regarding the shared use of amateur bands.

You bet. Any individual is automatically "licensed" to use any and all
means of communication on any frequency in a life-and-death emergency,
goes far beyond just ham radio. There's an equivalent provision in the
aviation regs.

Well, thats nice rhetoric, Mr. Professional Soldier, but that nonsense is not fooling me. I'm fully aware of the military training scenarios featuring American citizens as the target (so-called terrorist groups - often conservative right-wing groups defined as "terrorist" groups). As any truthful professional soldier will tell you, this type of training has become commonplace within the military over the last few years.

And this mission (control of "terrorist" groups in the US) is certainly one of the primary factors driving the development of "crowd control" weapons in the military.

As for the "non-lethal" nonsense, let me remind you that just about everytime the military has been used for "law enforcement," the situation has become lethal.

Now you want to hand soldiers (and eventually police departments) a weapon touted as "non-lethal" if used correctly, when those very soldiers have shown that they cannot be trusted to use a gun correctly in those situations (remember, thats why the military does not give bullets to soldiers on guard duty).

Somehow, your claim that this is "non-lethal" technology does not really comfort me that much.

Ah, judging from the first paragraph directly above, I see you're also aware of the military training scenarios featuring so-called "terrorist" groups as the target (or at least aware of the mentality behind that training).

Anyway, the two paragraphs above don't add up when taken together. If "your men" are under fire, are you going to sit around waiting for this V-MADS weapon to be deployed? Of course not. You're going to shoot first and let God sort out the dead afterwards. So obviously, protection of civilians is not the real impetus for this new technology like you claimed in the second paragraph. Instead, this technology is obviously designed to control non-violent crowds (crowds that pose no lethal threat to your soldiers).

> book "Black Hawk Down".

V-MADS technology would not have made any difference in Somalia, my friend. Thanks to the overly aggressive tactics used, our soldiers succeeded in turning the entire population of that country against us in just a matter of days (even groups that initially supported our involvement). V-MADS technology would not have changed that at all.

Even that specific incident (the crowd dragging the soldier) would not have changed with V-MADS technology. Since that incident was totally unexpected, V-MADS technology would not have been immediately available to use. By the time it would have reached the location, the incident would have been over.

> People like you would prefer my

> the enemy really nicely "oh would
> you please not hurt us?". While
> they cut our throats and spit on,
> and burn the American flag for
> the anti western crowds that have
> not so friendly intentions for
> the U.S.

Don't give me that "comrades in arms" fighting the enemy nonsense, because it just doesn't fly. This technology, as advertised, is not about fighting the enemy . This weapon is being advertised as a crowd control tool. And, as far as I know, the military has not yet defined non-violent crowds as the enemy (yes, since you've already said you would use conventional weapons against violent crowds that threatened your soldiers, we are talking about non-violent crowds).

And, if you're fighting an enemy, you're not going to use weapons like this in a non-lethal manner. If this type of weapon is used at all, it will be used to kill the enemy. As such, it becomes nothing more than another weapon to kill with (so drop the high moral facade, my friend).

And, finally, I strongly object to your attempts to paint me as anti-American or anti-military. Throughout this entire discussion, my comments have been solely directed at the use of this technology as a crowd control tool. Not once have I commented on the use of this technology against a real enemy in a warfare situation.

Furthermore, I don't see how one can be painted as anti-American because of opposition to a weapon anyway. The United States has huge chemical weapons stockpiles. Is it anti-American to be opposed to chemical weapons? What about biological weapons (we have a stockpile of those also)? What other weapon must I not object to if I want to avoid being called anti-American?

I agree, Larry. I don't ride with her (as you will note, I said the described ride was rare - somewhat necessary at the time).

Actually, I have told her on many occasions that I think her driving sucks, that she needs to slow down, and that she needs to pay much more attention to the road. And I'm not the only one - my grandmother flat refuses to ride with her (and my grandmother is dependant on others for transportation since she no longer drives). So does the rest of the family (it only takes one ride with her to learn not to do that again).

But, I doubt I could do much more than what I have already done. We are not exactly close (I see her about once a month - she spends a lot of time out of town, as do I), so there is no way to watch her everyday. And she is determined to drive.

Anyway, enough of this. I understand your feelings (I share those same feelings about bad drivers - more so in this case because I'm directly involved with this one). Take care.

The problem I see here is that your argument carries with it some baggage from the earlier discussion, when you implied that the government should not force radio amateurs to do certain things. From what you've said in this latest round, it seems as though you're using the word force to describe the simple fact that the government has requirements that must be met for obtaining an amateur license. This time without commentary as to the merit of those qualifications. Is this an accurate summary?

Agreed. In fact, they let the cat out of the bag with the press release (its based on RF). Since we're talking about radio here, it should not be that difficult to figure out - almost anybody familiar with radio could come up with the frequency used with little experimenting and the equipment should certainly not be that difficult to build. Somehow, I suspect we're seeing the beginnings of a whole new arms race.

Not wishing to beat a dead horse, wasn't 21.25 the audio? The separation is the familiar 4.5 MHz and the NTSC (Not the same color???) signal is inverted by the tuner. I'm not even sure that they didn't use separate i.f. strips in the real early days. Had to be some explanation for all the tubes in a DuMont.

Some of those early sets could detect someone using his Zippo from six city blocks.

Legal or otherwise, how much good can come of doing Blah, Blah, Blooie on AM at 28.085? My interpretation is that we no not need to respect the pirate for purposes of malicious interference but this does not mean rules are suspended.

Besides, all it really accomplishes is that Channel 19 two up sounds like Channel 19 zero up. The dumb bastard hasn't a clue anyway. Time to revive wide-shift RTTY; catch the BBC at 12.090 to see what that does to listening pleasure.

>That would be willful and malicious interference.

No, it's not.

"Malicious interference" only occurs when one station willfully disrupts the communicaitons of an otherwise lawfully oerating station, een if it's not in the Amatuer Service. An example are the point-to-point RTTY stations operating at 30meters.

The only other exception is when the communications are of a bonafide emergency nature. In that case any person may use any mode, band, or method of signalling in order to summon assistance.

And I won't shoot.

Nope, it's not. I'm serious about this one.

> If you can prove the opinion of the FCC is other than that of the conversation

Negatives are generally impossible to prove unless a mutually exclusive
condition exists. Phil, an expert in the field, disagrees with you. That
fact behooves you to produce some valid evidence. Note that I asked for
proof when Phil related his tale about Pres. Bush and JY1.

It's OK to use the word negatively as in, "I don't swear", and it's

OK to talk about the word itself, e.g. "swear". It is not OK to say, "I swear to <something>". Dave claimed that I swore never to get an Extra license. He is lying.

I don't think calling cq on top of an illegal station could be considered jamming. And if another legal station answers, I answer back. Now, is that illegal?

A licensee was ordered to show cause why its private radio and common carrier paging licenses should not be revoked after a Commission investigation revealed that

> one of its PCP stations had repeatedly and willfully transmitted in a manner that caused harmful interference to the transmissions of a competing PCP station. Monitoring of the licensee's PCP station by Commission staff suggested that transmissions made by the licensee on certain days were not for the purpose of conveying actual pages for subscribers. Rather, the licensee was apparently attempting to degrade the quality of service provided by its competitor so that the competitor's customers would take its paging service. In addition, information before the Commission suggested that "test" transmissions conducted by the licensee on several occasions were not kept to a minimum and did not employ sufficient measures to avoid harmful interference, and that the licensee retransmitted previously completed common carrier and PCP pages at times in an attempt to reduce the amount of time available for its competitor to complete its legitimate pages. Finally, it appeared that the licensee had made misrepresentations to the Commission in its responses to inquiries about the interference to its competitor.

I don't know many people that have any favorable
attitude towards such "poster boy" enforcement of
speed limits. Few would tolerate speeding in residential
areas, but everyone (yes everyone) pretty much
believes that 55 on the highway is a joke.

By the way...when did speeding become a vehicular
crime?

Cheers,
Bill K2UNK

ROTFLMAO! Proving intent is always good for
a few laughs unless there is explicit statements by
the individual admitting to such intent.

> Throwing a carrier or calling an extensive "CQ" with no
> intention of establishing two-way communications is arguably

Throughing the carrier maybe, calling CQ is a reach.

Does that case law apply to interference with an
identified "pirate" or bootleg station?

I defined it in the part that you cut out, Jim. Hams are individuals who possess an amateur radio license. Some hams possess amateur radio licenses who never met the requirements. This happened a lot during the time only one General ham was all that was required to certify a Conditional ham. A friend of mine flunked the 5wpm code exam at the FCC when I got my Novice license. Next rattle out of the box, he was a Conditional and he still couldn't do 5wpm.

  The "Vehicular Crimes Unit" deals with any prosecution
  (misdemeanor or felony) where operation of a vehicle is the
  cause in fact of the violation.

Agreed, but I still don't see it happening in the first
place. Your postulation may be accurate as an
academic discussion, but the practical reality is
not likly (IMHO).

>>By the way...when did speeding become a vehicular
>>crime?
>
> The "Vehicular Crimes Unit" deals with any prosecution

Which sounds to me ten that the vehicular crimes unit
doesn't get involved in plain vanilla speed enforcement
then. Is that correct?

Cheers,
Bill K2UNK

Thanks for the cite Phil. My one comment is
that this case reflects a clear "ongoing" set of
incidents as opposed to a single interference
situation. The single incidient is really the more likly scenario
we have been discussing.

Cheers,
Bill K2UNK

OK, so maybe I ought to grab a fresh tire iron and cruise
through the truck stops down on I-10 to make sure all the
guys there on 28.085 are *really* unlicensed?

That's the response I was trolling for ;-)

Proving intent was the fun part of the drudgery of stakeouts, surveillance, and monitoring. We had one old-timer who could sit in the seat for hours without getting bored and get reasonably accurate intercepts but who had no feeling for intent. We had another who could make a snap decision in five minutes and be right on the mark every time.

>> Throwing a carrier or calling an extensive "CQ" with no

That's why we sharks use terms such as "arguably"... <ggg>

>> There is case law concerning when interference which appears
>> to be authorized transmissions is considered "malicious", so

>> from the case facts by a trained enforcement attorney.
>
>Does that case law apply to interference with an
>identified "pirate" or bootleg station?

I did post the Capitol Paging case digest. Although that case
involved interference to other licensed stations, the criteria
for determining whether transmissions are malicious interference
would still apply, and the question then is whether causing said
malicious interference is a violation or not.

The "any radio communication" wording of Sect. 97.101(d) would
make it a rule violation. Whether the Commission agent(s) -
the first line of decison - would take any action is not the
issue in question.

It also "assumes" that the carrier-thrower has the qualifications to make the decision that the station being thrown upon is illegal.

Only the Commission can make that decision. The bozo operating AM on 28.085 and using a "CB" handle or otherwise failing to identify can very well be a licensed operator, at which time we have a rule violation by a licensee rather than an unlicened transmission.

Sure, most hams here and elsewhere can make an accurate guess, but it's up to the professionals to make a qualified determination.

If someone wants to fight the ticket, there has to be SOME Deputy DA assigned to the prosecution......depends on who's free. Probability is that it would be a junior in the unit, (not all DA offices have separate misdemeanor units) but you never know.....Lyn gets his kicks out of courtroom litigation at all levels.

His non-vanity call is KD7DX, BTW -- a lucky break.

Ditto, Jim. Ya gotta remember, Phil is also a lawyer. :-) I'd imagine
that most FCC monitor personnel might take a more naturally broad view
of the proceedings.

 No, but you said that you didn't meet the requirements when your
buddies skipped your code test way back in the early 50's. So maybe
you're talking about yourself.

Yes, and not to communicate with THEM, either. Hams are prohibited from communicating on the air with unlicensed stations. If you yell at them the FCC could decide to cite you instead of them.

I always called 'em bootleggers. Cecil calls 'em hams. Wonder what that
means.

Don't bet on it. I knew a young trooper who cited a motorist for doing
57 in a 55 zone. The officer was cruising at 55 when the guy passed him,
and he saw something he didn't like. Redlight time.

Jim:

Cecil's "argument" (more like a whining, foot-stomping rant) about hams being "forced" to take Morse code tests is simply an extension of the same objections to learning and being tested on a useful communications skill which has been the trademark of no-coders since they emerged on the scene. It is all about the laziness of people who see something they want (talking into an HF microphone) but don't want to exert themselves in order to gain that privilege. It is welfare state mentality. If Cecil had never been frustrated by the code testing requirements in his ham career, he wouldn't be engaged in this pedantic, churlish quibbling over the word "force." This is all about Cecil's emotional immaturity, and little else. It is truly pathetic.

If I were to establish a "Trucker's Band," I certainly wouldn't place it anywhere in the HF range. It should ideally be UHF, to limit range to line-of-sight and sanction illegal power amplifier owners with fried brains. I'd also permit base-to-mobile comms between dispatchers, truck stops, police, etc. 25 channels, 1-5-10-25 watts power selectable, licenses (with significant license fee) and use of call signs required, also channels dedicated to data modes and an APRS-like GIS-based service.

Just my $.02.

I kind of like the Full Body Shield Suit. It has STYLE! And it makes a bold fashion statement that is sure to attract the ladies. And to round it all off, I simply must have one of the EMF proof wallets (imagine flipping one of those babies open to impress the ladies when it comes time to pay for the dinner). Ah, the future is looking better all the time.

If I had a clean sheet of paper I wouldn't put it on Lo-VHF either. There are however facts on the ground today. The idea is not to put obstacles -- and you propose some doozies -- in the way of acceptance of a superior but low risk approach. This may be wierd but it does have the advantage of using existing antennas and power plugs. A lot of company fleets are loaded with gear to locate the truck and communicate with it; talking to his dispatcher is the least of his worries. The same problem of a 45 foot box that produce co-phased mirror mounts also exists at UHF.

I guess the point of debate is why it is truckers, who are as a group among the 'opinion leaders' of CB if you can stomach the term, are leading the sheep further afield and into 10 meters. If the truckers get away with it, the fixed power jocks are sure to follow. And they will -- both get away with it and develop a following. I am not guaranteeing results but not much changes if it turned into a fiasco.

In the early days of telephones, the phone companies did not support the use of their lines for chatter and could not for the life of them understand why a farmer needed a phone. They were wrong. Such data as exists would suggest that trucking use of CB is short range and pretty much restricted to inter-truck usage. Are we making the same mistake?

Opening it up to the company, the law, and dispatchers either duplicates existing gear or defeats the whole purpose. Remember when CB was largely truckers and became chic in the fuel crisis and double nickels era. Are we making the same mistake?

Your two cents is worth every bit as much as mine. Thanks.

Dick

BH?  I thought you were JR.  Make up your mind.  :-)

Don't know if it's "legal", but I would consider it "behaving yourself".  I
think I explained in another post that, in my way of thinking, transmitting
a carrier for the purpose of creating interference would be illegal.  But
maybe the difference between that and having a QSO is a bit too subtle for
you to discern.

According to:

http://www.maricopa.gov/attorney/1majorcri.asp

Vehicular Crimes prosecuted by the Maricopa County Attorney are:
Vehicular homicide, aggravated assault and aggravated driving under the influence cases are handled by the Vehicular Crimes Bureau.

So I doubt your baby brother will be making me a poster boy anytime soon... :-)

BTW the prosecuting of speeding tickets is done mostly by rookie attorneys and those who can't make it on the outside. It's real grunt work, but I'm sure you knew that... :-)

He is as much maverick as I am. If he decides that it's time
to make an example out of someone, he'll make sure that even
though one of the grunts does it, he'll keep a sharp eye and a
guiding hand on it.

Phil,

Not having the legal experience you do, I may be way off base. But I would think that it would be hard to prove one's "intent" when there are two legal stations on a given frequency holding a QSO, or even if someone sent a lengthy CQ. After all, that person cannot know if someone is going to answer, or he *might* not even be hearing the interlopers. To me, the greater weight of legitimacy would bear on the licensed station(s) as long as they were operating within the terms of their tickets. Unless they were using the wrong mode (AM, for example), playing music, or throwing carriers, "malicious" would be hard to prove.

Just MHO.

Hans,

I just can't see your position on this. If I want to use 28.085 under the terms of my license for CW/digital and there happens to be a bootlegger there, I cannot see how you would want to paint me with a criminal brush. To me, it is quite simple. I am LICENSED for that frequency. As long as I use it in the manner for which it was intended, I cannot see your position of (seemingly) making the ham out to be engaging in deliberate interference. Thusly, if I send out a series of CQs on top of some idiot who has no business being there, I am perfectly legal. If I begin to play music, holler at the truckers on AM, set a dead key or a continuous tone, then I am operating outside of the terms of the use of that sub band. In that case, I AM operating my station illegally and the truckers don't really have anything to do with that--it's something I agreed to (that is, to operate within the regulations) when I obtained my license. If I send out CQs and no one answers, I can't help that. And my "intent" cannot be questioned.

The whole thing boils down to the fact that I have a perfect right to be on 28.085 operating with the modes allowed, the trucker bastard has NO right to be there, and if I "interfere" with his stinkin' export, roger-beepin' piece of sh** radio, all the better. I have no sympathy for the law-breaking "freebanders" and their illegal radios.

So, Hans, no hard feelings on my part, but if you hear K4KWH sending CQ on 28.085 go ahead and turn me in. LOL!

Most are handled by the court clerks as guilty pleas with fine mailed in. Fighting it is almost always folly and more costly than just paying up. Mostly you don't have to go to court, just mail in your plea form and fine, from the fine schedule you get with the ticket. In these parts, at least.

Larry, "exerting themselves" is a lot like "produced with effort",
the dictionary definition of "forced". You have already admitted
that your Morse code skill was "produced with effort". Therefore,
according to your very own dictionary, you were forced.
